

Lakshmi Nikitha Ankam

Data Analyst

lakshminikithaankam2003@gmail.com | +1 (350) 250-9905 | CA, USA (Open to Relocate) | [LinkedIn](#)

SUMMARY

Data Analyst with 3+ years of experience solving operational and supply chain reporting problems across e-commerce, procurement, inventory, and supplier performance. Reduced reporting turnaround time by 25% and weekly reporting effort by 30% through SQL automation, data validation, and BI reporting. Experienced in translating complex operational data into KPIs, dashboards, and actionable recommendations for cross-functional teams.

PROFESSIONAL EXPERIENCE

Data Analyst, RODAN and FIELDS | USA

Jan '25 -Present

[Rodan + Fields is a skincare and haircare company focused on dermatologist-inspired beauty products and direct-to-consumer commerce.]

- Improved operational performance insight using **SQL** and **Python**, uncovering demand trends, process bottlenecks, service delays and return patterns.
- Accelerated operational decisions by developing **Power BI dashboards** with **Power Query** and **DAX** to monitor order status, fulfillment time, cancellation rates, and monthly operational trends.
- Reduced ad hoc analysis turnaround time by 25% by creating reusable **SQL queries** and standardized Excel and Power BI reporting templates.
- Improved reporting accuracy by 15% by implementing **SQL-based** data validation checks for duplicate records, missing values, invalid timestamps, and source-to-report inconsistencies.
- Aligned operations, e-commerce, customer service, and business stakeholders by defining **operational KPIs**, validating Power BI outputs, investigating process bottlenecks, and translating analytical findings into actionable recommendations.

Data Analyst, XDLINX | INDIA

Jan '22 - May '24

[XDLINX Space Labs is a space-technology company developing small-satellite platforms and end-to-end mission solutions for commercial and defense applications.]

- Improved material-planning decisions by extracting and analyzing inventory, purchase-order, supplier, and engineering-demand data from **ERP systems (SAP, Oracle)** using SQL and Python to identify shortages, delays, excess stock, and consumption trends.
- Reduced material-shortage review time by 20% by building **Tableau dashboards** and **Excel reports** to track key material-planning and procurement KPIs.
- Strengthened supplier evaluations by performing **EDA** with **Python** and **SQL** to compare lead times, fulfillment rates, delivery reliability, and quality issues across vendors, supporting consistent procurement decisions.
- Streamlined weekly reporting effort by 30% by developing **Python** and **VBA automation scripts** to clean, validate, consolidate, and refresh procurement and inventory datasets, improving data consistency, KPI accuracy, reporting speed, and review cycles for staff.
- Coordinated cross-functional planning by partnering with engineering, procurement, and operations teams to validate demand, investigate material discrepancies, and communicate findings through Tableau reports.

PROJECTS

DataPilot-AI - Autonomous Analytics Platform | Python, LLaMA 3.1, Plotly, Streamlit

- Transformed raw CSV files into executive-ready insights by building an autonomous analytics platform that generates 6–8 business findings and interactive dashboards in under 30 seconds for non-technical managers
- Accelerated self-service decision-making by developing an **LLM-powered** domain identifier that detects business context across sales, HR, finance, and healthcare with 90%+ accuracy before generating matched visual narratives.

Data Job Market Intelligence Dashboard | Python, SQL, Tableau

- Analyzed 10K+ job postings to surface in-demand skills, salary bands by region, and keyword trends over time, using **Python** for data collection and cleaning and **SQL** for aggregation.
- Built an interactive **Tableau** dashboard with drill-through by role, location, and skill, supporting self-directed market research.

Plate-to-Health - Nutrition Analytics Warehouse | BigQuery, dbt, Tableau, Vertex AI

- Lowered analytics query costs by 55% across 10TB+ dietary data by modeling partitioned fact tables, 30+ dbt models, materialized views, and aggregated reporting marts for faster regional nutrition analysis.
- Enabled policy-focused nutrition insights across regions by building **KPI marts** and **Tableau** dashboards that tracked dietary patterns, health indicators, and population-level trends for decision-makers.

TECHNICAL SKILLS

Programming Languages: SQL, Python (Pandas, Matplotlib, Seaborn), PySpark

Databases & cloud Platforms: PostgreSQL, MongoDB, Snowflake, BigQuery

Technologies/Frameworks: Power BI (DAX, Power Query), Tableau, Looker, Excel (Power Pivot, VBA), Plotly, Git, JIRA, Agile

Analytical Methods: A/B Testing, Hypothesis Testing, Regression Analysis, Trend Analysis, Time Series Forecasting, Cohort Analysis, Funnel Analysis, EDA, KPI Development, Root Cause Analysis, Data Quality Assessment, Data Storytelling, Stakeholder Management

Business, Operations & Supply Chain: Inventory Management, Procurement Analysis, Supplier Performance Evaluation, Demand Planning, Order Fulfillment Analysis, E-commerce Operations, Vendor Lead-Time Analysis

EDUCATION

Masters in Data Science - University of North Texas | 4.0/4.0

Aug '24 - May '26

Relevant Coursework: Information visualization, Statistical Learning, Data Modeling, Big Data Architecture, Supply chain Analytics, Machine Learning, Data Mining
