

# NITIN M

## DevSecOps & CloudOps Engineer

✉ nitindevops2908@gmail.com ☎ +17818565488 📍 US 🔗 [linkedin.com/in/nitin-reddy-a11b5a253](https://www.linkedin.com/in/nitin-reddy-a11b5a253)

### Summary

---

DevSecOps & CloudOps Engineer with 5+ years of experience building secure, scalable cloud platforms on Azure and AWS. Expertise in Azure networking and security services including Front Door, WAF, Application Gateway, DDoS Protection, VNets, and Private Endpoints. Hands-on experience deploying Micro Frontend (MFE) and microservices architectures using AKS with secure ingress and global traffic routing. Strong background in Infrastructure as Code using Terraform, CI/CD automation with Azure DevOps and GitHub Actions, and scripting using Python and Bash. Proven track record in implementing DevSecOps practices, optimizing system performance, and resolving complex production issues in distributed environments.

### Skills

---

#### Systems Administration

Linux (Ubuntu, RHEL), Windows

#### Cloud Platforms

Microsoft Azure, AWS, Google Cloud Platform

#### Artifact Management

JFrog Artifactory, Nexus

#### DevOps & Automation

GitLab CI/CD, Jenkins, Terraform, Ansible, Chef, JFrog

#### Monitoring & Logging

Azure Monitoring, Prometheus, Grafana, Dynatrace, Splunk

#### Project Management & Version Control

Jira, Agile, Git, GitLab, Bitbucket, Azure Repos

#### Additional Skills

Machine Learning, Language Processing, MATLAB, Microsoft 365

#### Programming & Scripting

PowerShell, Python, Bash

#### CI/CD

Azure DevOps, GitHub Actions, Jenkins CI/CD automation

#### Streaming & Messaging

Apache Kafka

#### Container Orchestration

Azure Kubernetes Service (AKS), Amazon EKS

#### Data & Databases

Azure Synapse, SQL, MySQL, PostgreSQL, MongoDB

#### Azure Networking & Security

Azure Front Door, WAF, Application Gateway, Azure Traffic Manager, Azure DDoS Protection, VNets, Subnets, Network Security Groups (NSGs), Private Endpoints, Service Endpoints

### Experience

---

#### CloudOps|DevSecOps, Everest

Jun 2024 – Present | New Jersey (Remote)

- Designed and implemented secure edge architecture using Azure Front Door integrated with Web Application Firewall to expose Micro Frontend (MFE) applications globally with SSL termination and protection against OWASP threats
- Hosted Micro Frontend static UI applications in Azure Storage static website hosting and configured Front Door routing rules to direct traffic to multiple frontend modules based on paths and domains
- Configured WAF policies, both managed and custom rules to protect static UI and backend APIs from SQL injection, XSS, and bot attacks

- Implemented Azure Traffic Manager for failover and high availability, ensuring seamless routing between regions
- Integrated Azure Application Gateway with AKS ingress controllers for internal routing of API traffic behind Front Door
- Enabled Azure DDoS Protection Standard to safeguard public endpoints from volumetric and network layer attacks
- Deployed backend APIs on AKS and integrated them with Front Door and Application Gateway for secure end-to-end routing
- Configured NGINX ingress controller with path-based routing to connect MFE UI hosted in storage with backend microservices in AKS
- Implemented session stickiness and ingress optimizations to resolve authentication issues across multiple pods during OIDC login flows
- Designed Virtual Networks (VNETs), subnets, and Network Security Groups to control inbound and outbound traffic across environments
- Implemented Private Endpoints and Service Endpoints to securely connect AKS workloads to Azure services such as Key Vault and Storage
- Configured Azure Firewall rules and network policies to enable secure communication between services
- Built CI/CD pipelines using Azure DevOps, automating build and deployment of MFE static applications and backend APIs
- Automated provisioning of Azure networking, AKS clusters, Front Door, and security components using Terraform
- Integrated DevSecOps tools such as SonarQube, Trivy, and GitLeaks for vulnerability scanning and compliance checks
- Leveraged Dynatrace AIOps to automatically detect anomalies, analyze traffic patterns, and improve operational monitoring efficiency

#### **DevOps Engineer, Abbott**

Dec 2022 – May 2024 | Texas (Remote)

- Designed and maintained end-to-end CI/CD pipelines using GitLab CI/CD automating build, test, and deployment processes for various applications including .NET, Java, and Node.js, improving release consistency and reducing manual effort
- Debugged GitLab pipeline failures where jobs were intermittently failing due to runner resource limits and incorrect job dependencies, fixed by restructuring stages and optimizing runner configuration
- Implemented reusable GitLab pipeline templates to standardize build and deployment flows across multiple services, reducing duplicate configurations
- Built and deployed applications on Amazon EKS, managing cluster provisioning, namespace design, resource allocation, and autoscaling using HPA and Cluster Autoscaler
- Provisioned and managed AWS infrastructure using Terraform and CloudFormation, creating reusable modules for VPCs, subnets, route tables, NAT Gateways, and security groups
- Containerized applications using Docker and managed image repositories in Amazon ECR, ensuring proper versioning and secure image storage
- Designed and implemented AWS networking architectures, including VPC design, public/private subnets, route tables, VPC peering, and integration with Application Load Balancers (ALB) for high availability
- Developed serverless solutions using AWS Lambda, integrating with API Gateway, S3, and CloudWatch for event driven processing and backend automation
- Managed Amazon S3 buckets with lifecycle policies, versioning, and encryption to optimize storage costs and ensure data durability and compliance
- Implemented IAM roles and policies, enforcing least privilege access and enabling secure communication between AWS services
- Supported production Apache Kafka clusters for real-time data streaming across microservices, assisting in broker setup, topic configuration, partition planning, and retention tuning to ensure reliability and performance

- Worked with Abbott's regulated healthcare applications, supporting the full Service Lifecycle (SLC) by coordinating releases, transition to support teams, and ensuring compliance with pharma standards
- Automated Kafka operational tasks such as topic provisioning, configuration updates, and health checks using shell/Python scripts and CI/CD pipelines, improving deployment efficiency and reducing manual effort
- Collaborated with development teams to onboard applications to Kafka, defined producer/consumer configurations and access controls, and monitored cluster health to support troubleshooting and performance optimization
- Migrated from Dynatrace Managed to Dynatrace SaaS, built dashboards, and optimized monitoring efficiency by 25% while improving business visibility by 30%, supporting effective infrastructure monitoring
- Automated deployments and configuration using Ansible and supported Git/SVN branching, access control, and troubleshooting across delivery pipelines
- Developed a disaster recovery pipeline using PowerShell, Python, and Azure DevOps integrated with PagerDuty, enhancing incident response time by 45% and system resilience, with practical scripting skills in Python
- Streamlined incident handling by integrating PagerDuty into DR workflows, bolstering team coordination and expediting alert response by 40%, essential for timely Linux systems troubleshooting
- Managed DNS configurations using Amazon Route 53, implementing routing policies and failover strategies for high availability
- Implemented blue-green and rolling deployment strategies to ensure zero downtime releases and smooth production rollouts
- Automated patch management and disk encryption for Linux and Windows servers using PowerShell and Python, strengthening system security protocols and demonstrating proficient Linux administration
- Worked with MongoDB for cluster configuration, backup strategies, and performance tuning in distributed applications
- Optimized data workflows and queries in data platforms (BigQuery-like systems), improving query performance and reducing operational costs
- Implemented centralized observability using Prometheus, Grafana, and CloudWatch, enabling proactive alerting and faster incident resolution across microservices
- Implemented cost-optimization strategies by restructuring Event Hubs and databases into microservices, realizing up to 80% savings on Event Hubs and 60% on databases

#### **Cloud Engineering Intern, Cloud Control Solutions**

Jun 2022 – Oct 2022 | MA

- Assisted in deploying and managing applications on AWS and Azure cloud environments, gaining hands-on experience with infrastructure automation and CI/CD practices.
- Supported Linux server administration, shell scripting, and basic Python automation for routine operational tasks and environment setup.
- Worked with Docker containers and Kubernetes fundamentals, helping development teams with application deployments and troubleshooting activities.
- Participated in Terraform-based infrastructure provisioning and version control workflows using Git and Azure DevOps.
- Gained basic exposure to Golang by understanding cloud-native tooling and making minor code updates under senior engineer guidance.
- Monitored application health and logs using CloudWatch and Dynatrace, assisting in issue resolution and performance optimization.
- Developed and maintained AWS Lambda functions using Python for event-driven automation, integrating with Amazon S3, CloudWatch, and API Gateway to streamline operational workflows and reduce manual intervention.

#### **DevOps Engineer, Temenos**

Jun 2020 – Jul 2021 | India

- Designed reusable Terraform templates to provision infrastructure across AWS and GCP (Compute Engine, VPC, IAM), improving consistency across environments

- Built and maintained Jenkins CI/CD pipelines, enabling automated build and deployment workflows with Git-based version control
- Developed Ansible playbooks for configuration management, server provisioning, and application setup across cloud and on-prem environments
- Automated operational tasks using Bash and Python scripting, reducing manual effort and improving deployment reliability
- Managed and supported Linux-based systems on cloud VMs (EC2 and GCP Compute Engine), including troubleshooting, patching, and performance tuning
- Supported initial cloud migration efforts, assisting teams in onboarding applications to GCP environments and standardizing deployment practices
- Implemented artifact versioning and release management strategies, improving traceability and rollback capabilities
- Monitored system and application health using custom scripts and basic monitoring tools, enabling early detection of issues
- Maintained scheduled automation using cron jobs, ensuring reliable execution of background processes and operational tasks

## Education

---

**Master of Science, Computer Science,** *University of New Haven*  
GPA: 3.4/4.0

Aug 2021 – Dec 2022

**Bachelor of Technology, Computer Science,** *CVR College of Engineering*  
GPA: 8.9/10 (CGPA)

Aug 2016 – May 2020
