

Pavani Kolla
Data Analyst

Charlotte, NC | 575-463-0391 | pk.pavanikolla@gmail.com | [linkedin.com/in/pavanikolla](https://www.linkedin.com/in/pavanikolla)

Professional Summary:

- Over 6+ years of experience as a Data Analyst with expertise in transforming complex datasets into actionable business insights through SQL, Python, Power BI, Tableau, and advanced Excel across Healthcare, Finance, and Retail domains.
- Strong expertise in Business Intelligence, Data Analytics, Data Visualization, KPI Reporting, Dashboard Development, and Data Storytelling to support strategic business decision-making.
- Experienced in requirements gathering, stakeholder management, business analysis, and translating business needs into scalable analytical solutions and executive dashboards.
- Proficient in SQL, Python (Pandas, NumPy, Scikit-learn), Excel, Power BI, Tableau, and Looker for data extraction, transformation, analysis, visualization, and reporting.
- Hands-on experience in Data Cleaning, Data Validation, Data Quality Management, Data Reconciliation, Root Cause Analysis, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Analytics, and A/B Testing to improve data accuracy and business performance.
- Experienced in designing and optimizing ETL/ELT pipelines, Data Modeling, Data Warehousing, Data Governance, Metadata Documentation, and Reporting Automation using Airflow, Alteryx, dbt, Azure Data Factory, AWS Glue, and SQL.
- Skilled in developing interactive dashboards, executive scorecards, and self-service BI solutions that enable business users to monitor KPIs, identify trends, and make data-driven decisions.
- Hands-on experience working with cloud platforms including Microsoft Azure, AWS, and Google Cloud Platform (GCP) utilizing Azure Data Factory, Azure Data Lake, Azure Synapse Analytics, AWS Redshift, AWS Glue, Amazon S3, Athena, EC2, and Big Query for scalable analytics solutions.
- Strong knowledge of relational and cloud databases including SQL Server, Oracle, PostgreSQL, MySQL, Teradata, Snowflake, Redshift, Big Query, and Mongo DB.
- Experienced in Agile/Scrum environments with strong collaboration across cross-functional teams, ensuring timely delivery of high-quality analytical solutions while maintaining documentation and reporting standards.
- Adept at identifying business opportunities through trend analysis, forecasting, predictive modeling, and performance measurement to improve operational efficiency and support organizational growth.
- Utilized Generative AI tools (ChatGPT, GitHub Copilot, Microsoft Copilot) to accelerate SQL query development, Python scripting, data analysis, documentation, report generation, and troubleshooting, improving overall productivity.

Technical Skills:

Programming Language: Python (Pandas, NumPy, SciPy, Scikit-learn, Matplotlib, Seaborn)

SQL Language: SQL (MySQL, PostgreSQL, MS SQL Server), NoSQL (Mongo DB)

Data Visualization & BI Tools: Power BI (DAX, Data Modeling), Tableau, Excel (Pivot Tables, VLOOKUP, Advanced Excel), Looker Studio

Databases & Data Warehousing: SQL Server, Oracle, Teradata, Azure SQL Database, Data Warehousing Concepts

Cloud Platforms: Microsoft Azure, Azure Data Factory, Azure Data Lake, Azure SQL, Data Bricks, AWS, GCP

Data Analysis & Analytics: Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Modeling, A/B Testing, Data Validation, Data Reconciliation

ETL & Data Processing: ETL/ELT, Data Cleansing, Data Transformation, Data Integration, Airflow, Alteryx

Data Modeling & Reporting: Data Modeling, KPI Reporting, Dashboard Development, Ad-hoc Reporting.

Machine Learning: Regression, Classification, Clustering (Scikit-learn, PyCaret)

Tools & Methodologies: Agile, Scrum, Jira, Confluence, Excel Power Query, Git, Github, Data Governance, Documentation

Professional Experience

Client: Morgan Stanley, NYC

Feb 2025-Till Date

Role: Data Analyst

Responsibilities:

- Developed Python automation scripts for data extraction, validation, and recurring financial reporting using Pandas and NumPy.
- Developed SQL queries to analyze trading, customer, and financial datasets for business reporting.
- Built interactive Power BI and Tableau dashboards to monitor revenue trends, transaction volumes, customer activity, and operational KPIs.
- Investigated production data issues using SQL and Python, performing root cause analysis and collaborating with engineering teams to resolve defects.
- Collaborated with finance and operations teams to gather reporting requirements and develop analytical solutions.
- Used Microsoft Fabric and OneLake to integrate enterprise data and support scalable Power BI reporting.
- Performed data validation, reconciliation, and exploratory data analysis (EDA) to improve reporting accuracy and identify anomalies.
- Used Snowflake and SQL to validate large datasets and troubleshoot discrepancies across reporting environments.
- Queried and analyzed large datasets using Azure Databricks notebooks to support business analytics.
- Assisted in validating dbt transformation models and standardized KPI reporting datasets.
- Created DAX measures and optimized data models to improve dashboard performance.
- Automated monitoring of data refresh processes and reporting workflows using Python.
- Worked with Azure-based data warehouses and cloud platforms including Azure, AWS, and BigQuery for enterprise analytics.
- Developed dashboard visualizations using Power BI, Tableau, and Looker.
- Applied statistical analysis and predictive analytics using Scikit-learn to identify trends and customer behavior.
- Collaborated with data engineering teams to validate data pipelines and optimize analytics workflows using Databricks.
- Executed data quality checks, anomaly detection, and reconciliation to ensure reporting accuracy before production releases.
- Documented business logic, data definitions, and reporting requirements to support governance.
- Participated in Agile ceremonies including sprint planning, stand-ups, and backlog grooming.
- Documented data definitions, business logic, and reporting requirements to support data governance and knowledge sharing

Environment: Azure Data Factory, Azure SQL Database, Azure Data Lake, Azure Data Bricks, SQL Server, Python, Pandas, NumPy, Scikit-learn, Power BI, Tableau, DAX, Excel, T-SQL, Data Modeling, Data Validation, Exploratory Data Analysis (EDA), Financial Data Analysis, Agile, Jira, Git, Data Governance, Reporting & Analytics

Client: Accenture, Hyderabad, India.

Aug 2021-July 2023

Role: Data Analyst

Responsibilities:

- Built Python scripts to analyze customer purchasing behavior, product demand, and sales performance.
- Integrated sales, inventory, and customer datasets using Pandas to create unified analytical datasets.
- Supported a global retail client by delivering analytics across sales, inventory, merchandising, and supply chain operations.
- Collected, cleansed, transformed, validated, and reconciled structured and semi-structured data using SQL, Excel, and Python.
- Developed complex SQL queries using joins, CTEs, and window functions for enterprise reporting.
- Built interactive Power BI and Tableau dashboards to monitor revenue, margins, inventory, stock turnover, and demand trends.
- Automated KPI calculations and recurring reports using Python, improving reporting efficiency.
- Used Alteryx Designer to automate data preparation, cleansing, and reporting workflows.
- Queried Oracle, SQL Server, and Snowflake databases for analysis and data validation.
- Conducted trend analysis, variance analysis, root cause analysis, and forecasting using historical sales data.
- Leveraged AWS Glue for ETL processing, data cataloging, and schema management.
- Worked with Azure Data Lake, AWS S3, Google BigQuery, SSIS, and Azure Data Factory to support ETL and analytics workloads.
- Designed multidimensional data models and supported enterprise data governance initiatives.
- Delivered executive dashboards and ad hoc analytical reports for business stakeholders.
- Documented business rules, reporting logic, and data definitions while participating in Agile/Scrum development.

Environment: SQL Server, Azure Data Factory, Azure Data Lake, AWS Glue, Python, Pandas, NumPy, Power BI, Tableau, SSIS, Excel, T-SQL, Snowflake, Data Warehousing, ETL, Data Validation, Data Cleansing, Forecasting, Retail Analytics, Agile, Jira, Data Modeling, Reporting & Analytics

Client: HCA Healthcare, Hyderabad, India.

May 2020-July 2021

Role: Data Analyst

Responsibilities:

- Developed Python scripts to analyze patient admission trends, resource utilization, and operational performance metrics.
- Analyzed healthcare datasets including patient records, operational metrics, and financial data to support business and clinical decision-making
- Wrote SQL queries to extract and analyze data from Teradata, Oracle, and SQL Server databases
- Applied statistical analysis using Python (Pandas, NumPy, SciPy) to identify trends, patterns, and anomalies
- Conducted exploratory data analysis (EDA) to improve data quality and support reporting requirements
- Developed interactive dashboards using Power BI and Tableau to track KPIs such as patient volume, operational performance, and service utilization.
- Experience with ETL (Extract, Transform, Load) processes and tool like Apache Airflow & Alteryx
- Performed data validation, cleansing, and reconciliation across multiple data sources
- Conducted A/B testing and statistical analysis to evaluate process improvements and operational changes
- Extracted and combined data from multiple sources including databases, flat files, and Excel reports
- Supported healthcare reporting by validating dbt transformation models and ensuring data consistency across reporting layers.
- Collaborated with business stakeholders to gather reporting requirements and deliver analytical solutions
- Automated healthcare data cleansing and validation workflows using Alteryx, improving reporting accuracy.
- Assisted in maintaining data governance standards and ensuring data quality compliance
- Created Python-based validation reports to improve data integrity across healthcare reporting systems.
- Created data models and documented data definitions to support reporting and analytics
- Provided ad-hoc analysis and reports to support operational and business teams
- Worked in Agile environment and collaborated with cross-functional teams for project delivery

Environment: SQL Server, Oracle, Teradata, Python, Pandas, NumPy, SciPy, Power BI, Tableau, Excel, Statistical Analysis, A/B Testing, Data Modeling, Data Validation, Healthcare Analytics, ETL, Data Governance, Agile, Reporting & Analytics

Client: BigTapp Analytics, Hyderabad, India.

Jun 2018-April 2020

Role: Entry Level Data Analyst

Responsibilities:

- Assisted in data cleaning, data integration, and data transformation using data warehouse concepts
- Wrote SQL queries to extract and analyze data from Oracle databases and support reporting needs.
- Automated recurring reporting processes using Power Query, Excel formulas, and Python scripts, reducing manual effort and improving reporting accuracy.
- Created Python utilities to perform automated file validation before loading data into reporting environments.
- Supported ETL processes and worked with tools like Apache Airflow and dbt for data preparation tasks
- Created reports and dashboards to track business metrics and support decision-making
- Worked with QA teams to validate data and identify test scenarios for reporting and data consumption
- Performed data mapping and maintained documentation using Excel and other tools
- Assisted in building logical data models and created ER diagrams to support reporting requirements
- Supported cloud-based analytics workflows using AWS services such as Redshift and Glue
- Developed basic Python scripts to automate data extraction and reporting tasks
- Assisted in managing Power BI dashboards and supporting user requests
- Participated in system testing, data validation, and functionality testing
- Collaborated with team members using JIRA to track tasks, issues, and project progress

Environment: Oracle, SQL, Python, Apache Airflow, dbt, AWS Redshift, AWS Glue, Power BI, Excel, Data Warehousing, ETL, Data Modeling, ER Diagrams, Data Validation, Jira, Reporting & Analytics, Cloud Data Pipelines

Education Details:

Masters: Masters in Data Analytics New Mexico State University (4.00 GPA)- 2025

Bachelors: Bachelors in Computers from Acharya Nagarjuna University- 2018
