

PRATHEEK VARDHAN BOMMU

Michigan, USA | +1 (330) 697-6252 | pratheek.b@jobsmailbox.com

SUMMARY

Cybersecurity Analyst with around 4 years of experience in enterprise SOC operations, threat hunting, incident response, detection engineering, SIEM monitoring, vulnerability management, and cloud security across financial services and technology environments. Hands-on expertise with Splunk, Microsoft Sentinel, IBM QRadar, CrowdStrike Falcon, SentinelOne, AWS security, Azure security, MITRE ATT&CK, Python, PowerShell, and Bash, with a proven record of reducing false positives, accelerating incident investigations, strengthening detection coverage, and improving security risk posture.

SKILLS

Detection Engineering and SOC: Threat Hunting, Incident Response, Detection Rule Development, Alert Tuning, False Positive Reduction, Use Case Creation, IOC Analysis, Log Correlation, MITRE ATT&CK, Cyber Kill Chain, Purple Teaming

SIEM and Monitoring: Splunk Enterprise and ES, Microsoft Sentinel, IBM QRadar, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Azure Monitor, Splunk Dashboards and Alerts

EDR and XDR: CrowdStrike Falcon, SentinelOne

Cloud Security: AWS IAM, Security Groups, GuardDuty, CloudTrail, Azure RBAC, Azure AD, MFA, Defender for Cloud, Shared Responsibility Model, Cloud Compliance

IAM and Access Control: Active Directory, Azure AD, RBAC, SAML, OAuth 2.0, OpenID Connect, SSO, MFA

Vulnerability Management: Qualys VMDR, Tenable Nessus, Risk-based prioritization, Remediation Tracking

Firewalls and Network Security: Palo Alto Networks, Cisco ASA, Fortinet

Networking and Protocols: TCP/IP, HTTP/HTTPS, DNS, IPSec and SSL VPN, SSH, SMTP, OSPF, BGP, Load Balancers

Scripting and Automation: Python, PowerShell, Bash, SOAR Playbooks, Security Automation

Compliance and Frameworks: HIPAA, PCI DSS, SOC 2, NIST CSF, NIST 800-53, ISO 27001

Professional Skills: Risk Assessment, Executive Reporting, Stakeholder Communication, Incident Documentation

Methodologies: SOC Operations, Incident Management, Agile, Scrum, Security Operations Best Practices

EXPERIENCE

MetLife, USA | Sep 2025 - Present

Cybersecurity Analyst

- Led threat hunting and detection engineering across enterprise security operations, developing and tuning Splunk Enterprise and ES detection rules that reduced false positives by 38% while improving actionable alert coverage.
- Engineered MITRE ATT&CK-aligned detection use cases using IOC Analysis, Log Correlation, Alert Tuning, and Use Case Creation, improving identification of suspicious activity by 32% across monitored environments.
- Investigated security incidents using CrowdStrike Falcon, SentinelOne, Splunk, and Microsoft Sentinel, correlating endpoint and security telemetry to accelerate incident triage and reduce average investigation time by 30%.
- Strengthened cloud security monitoring across AWS IAM, GuardDuty, CloudTrail, Security Groups, and Azure RBAC, identifying access and configuration risks that improved cloud security visibility by 35%.
- Automated repetitive SOC activities using Python, PowerShell, Bash, SOAR Playbooks, and Security Automation, reducing manual investigation effort by 34% and improving analyst productivity across recurring security workflows.
- Conducted risk assessment and vulnerability prioritization using Qualys VMDR, Tenable Nessus, Risk-based Prioritization, and Remediation Tracking, improving remediation focus and reducing high-risk exposure by 27%.
- Supported Purple Teaming and Cyber Kill Chain exercises to validate detection coverage, identify monitoring gaps, and strengthen defensive controls across critical security use cases and incident-response workflows.

Hexaware Technologies, India | Jan 2022 - Jul 2024

Cybersecurity Analyst

- Monitored enterprise security events through IBM QRadar, ELK Stack, Splunk Dashboards and Alerts, and AWS CloudWatch, improving centralized log visibility by 30% across critical infrastructure and applications.
- Developed and refined detection rules, alert tuning, IOC analysis, and log correlation to identify suspicious activity, reducing recurring false positives by 29% and improving SOC analyst response efficiency.
- Investigated security incidents using TCP/IP, HTTP/HTTPS, DNS, SSH, SMTP, and IPSec/SSL VPN telemetry, accelerating root-cause analysis and reducing average incident investigation time by 25%.
- Strengthened identity and access controls using Active Directory, Azure AD, RBAC, SAML, OAuth 2.0, SSO, and MFA, improving access governance and reducing unauthorized-access risks by 28%.
- Performed vulnerability assessments with Tenable Nessus and Qualys VMDR, applying Risk-based Prioritization and Remediation Tracking to focus remediation efforts on critical exposures and improve closure rates by 31%.
- Supported network security operations across Palo Alto Networks, Cisco ASA, Fortinet, Load Balancers, and BGP/OSPF, investigating connectivity and security events while improving incident resolution efficiency by 24%.
- Collaborated with SOC, infrastructure, and security teams on Incident Management, Threat Hunting, Agile, and Security Operations Best Practices, documenting incidents and contributing to continuous improvement of security monitoring processes.

EDUCATION

Master of Science in Computer Science

Sacred Heart University

Dec 2025

Fairfield, Connecticut
