Email: priyajain2923@gmail.com

Professional Summary:

Experienced Power BI Developer, Data Analyst, and Power BI Administrator with over 8 years of expertise in data analysis, business analysis, and cloud data engineering across industries like Healthcare, Banking, Insurance, and Manufacturing. Proficient in gathering requirements, collaborating with stakeholders, and designing data-driven solutions using Power BI, Snowflake, Tableau, SQL, and cloud platforms. Skilled in creating interactive dashboards, optimizing reporting processes, and facilitating cross-functional collaboration to drive business insights. Recognized for conducting training and promoting reporting best practices for seamless implementation of analytics solutions.

- Experience in Data Preparation, Data Cleaning, Basic Data Modeling and Data Blending using Power Query Editor and Power Bi Desktop.
- Experience in utilizing DAX functions includes Aggregation, Counting, Logical, Information and Date functions.
- Experience in designing and deploying graphical visualizations with Drill Down and Dropdown menu option and Parameterized dashboards using Power BI.
- Involved in Power BI administration Activities like Manage user access and permissions for Power BI workspaces, apps, and reports.
- Enhanced report performance by **75%** compared to legacy Business Objects reports by designing and implementing efficient data views, improving data processing for **2 million daily records**.
- Streamlined data flow for Power BI dashboards by leveraging optimized views, ensuring real-time insights and faster decision-making.
- Facilitate engagement by collecting requirements from business stakeholders, documenting needs related to Snowflake and Power BI data protection for lower-level environments, and communicating them effectively to engineering teams.
- Designed and implemented granular RBAC policies to define and manage access levels for users, roles, and privileges across databases, schemas, and objects in Snowflake.
- Implemented secure data masking along with encryption mechanism at row level, column level masking snowflake and power bi.
- Connected multiple data sources (SQL, Snowflake, Excel, APIs) to build scalable and optimized Power BI solutions.
- Optimized report performance by reducing query load times, using aggregations, and optimizing data models for large datasets.
- Having Experience in utilizing views, materialized views, and secured views in Snowflake to optimize data retrieval while balancing storage and compute costs, achieving up to a 35% reduction in compute expenses and 25% savings in storage costs.
- Worked with Power BI Desktop, Power BI Service with Pro and premium capacities.
- Having good experience with ServiceNow incidents and Jira tickets to offer a comprehensive overview to the business, enabling them to track daily incident progress through Power BI reports and dashboards.
- Worked under Agile Methodology throughout the project, performed decision making role in developing & planning as well as coordinated with assigned sprints.
- Good Understanding of the configuration of Schedule Refresh functionality to ensure the continual updating of Power BI reports and dashboards with the most current data sourced from underlying data repositories.
- Experience in Monitoring the performance of Power BI services and optimizing system resources to ensure optimal performance and responsiveness.
- Experience in Implementing backup and recovery strategies to safeguard Power BI data and ensure business continuity in case of data loss or system failure.
- Experience in Installing, configuring, and maintaining Power BI services and related components, including gateways, dataflows, datasets, and reports.
- Experience in working with compliance/regulatory framework for US supervisory policy related to Large Exposure to Data Aggregation and Reporting HIPPA Compliance.

- Experience in working with compliance/regulatory framework for US supervisory policy related to Large Exposure to Data Aggregation and Reporting BCBS (Basel Committee on Banking Supervision).
- Understanding of Data Analysis, Data Migration, Data Cleansing, Transformation, Integration, Data Import, and Data Export using ETL, Analytical and reporting tools such as SSIS, SSAS and SSRS. Experience in testing and writing SQL statements.
- Understanding working with paginated reports using Power BI Report builder.
- Familiar with Python for data analysis, scripting, and automation, utilizing libraries like Pandas and NumPy for basic data manipulation.
- Having good experience in Microsoft Excel for importing, cleaning, and transforming data from various sources for analysis using advanced Excel functions, such as VLOOKUP, HLOOKUP, INDEX-MATCH.
- Participating in System testing, User Acceptance testing (UAT), and Quality Assurance (QA) activities to ensure that technical solutions meet business requirements.
- Hands on Experience in performance tuning and query optimization in different databases like using Hive and SQL Server 2014/2016.

Technical Skills	
Data Base	MS-SQL Server 2016/2014, MS SQL, Possessive, Hive, Snowflake.
Reporting Tools	Power BI Desktop, Power BI Administration, Excel Reporting, SSRS.
Analysis and ETL Tools	SSAS, SSIS, Alteryx
Programming Language	SQL, T-SQL, DAX, M-Query, PowerShell Scripting, Python & Unix (Basic)
IT Process	SDLC, Agile, Project Management, Scrum
Collaboration Tool	Confluence, Jira
AWS Services	S3, EMR, Glue, RDS, Cloud Watch, Lambda, Step function, Metadata Set up.
Collaboration Tool	Jira, Confluence, MS office.
Version Control Tools	Gitlab, VFS.
Administration	Power BI Admin Portal, Office 365 Admin Portal, Power Platform.

Project Experience:

Client: Centene Health Care, St. Louis, MO

Apr 2024 – Till Date

Role: Sr. Data Analyst/ Power BI Developer

Project: Health Care Data Decommission

Responsibilities

- Collaborated with business users and stakeholders to understand healthcare-specific data requirements, including claims, provider, and practitioner subject areas, and translate them into actionable Power BI visualizations.
- Analyzed complex healthcare datasets, such as provider and practitioner information, to uncover trends, patterns, and anomalies for strategic insights.
- Designed diverse visualizations such as line charts, pie charts, histograms, maps, scatter plots, and KPIs to deliver impactful insights.
- Developed advanced measures and calculations using DAX queries, incorporating roles, perspectives, and partitions for enhanced reporting flexibility.
- Developed an end-to-end Power BI dashboard for ServiceNow incident tracking, enabling real-time monitoring and analysis of all issues raised by the business. Implemented automated data refresh schedules and configured performance monitoring to ensure seamless updates and timely insights.
- Utilized features like Row-Level Security (RLS), parameterization, deployment pipelines, and workspace management to ensure secure and efficient reporting.
- Implemented page-level, report-level, and visual-level filters in Power BI to meet specific reporting requirements.
- Conducted data analysis using SQL to support root cause investigations and validate data accuracy against source systems.
- Validated healthcare datasets with advanced Excel functions (e.g., VLOOKUP, INDEX-MATCH, conditional formatting) and created pivot tables, charts, and graphs for additional analysis.
- Scheduled and managed nightly and weekly data loads, ensuring data availability and integrity through automated ETL pipelines.
- Successfully migrated legacy reporting systems (Business Objects) to Power BI, achieving over 95% performance improvement and enhanced report usability.

- Ensured data accuracy, completeness, and consistency by implementing robust data quality standards involving data profiling, cleansing, and validation techniques.
- Integrated and analyzed diverse data sources to support key decision-making processes, providing insights into healthcare claims, provider performance, and practitioner trends.
- Performed advanced data transformation and manipulation using Power Query and other ETL techniques to enable seamless report development.
- Monitored and optimized the performance of Power BI reports, resolving issues related to data connections, refresh schedules, and visualization components.
- Documented data lineage, transformations, mappings, test cases, data models, and report specifications for clarity, maintainability, and compliance with healthcare data standards.
- Applied best practices in data utilization, ensuring high data accuracy, quality, and consistency across healthcare datasets consumed in Power BI.
- Provided training and support to stakeholders and end-users on effectively using Power BI dashboards for data-driven decision-making in the healthcare domain.

Client: Abbott Health Care, Princeton, NJ

Oct 2023 - Mar 2024

Role: Data Analyst/ Power BI Admin

Project: Claim Data Analytics

Responsibilities:

- Configure and maintain the Power BI Service environment, including workspaces, datasets, and gateways.
- Ensure secure and seamless data connectivity from on-premises and cloud-based systems.
- Designed and optimized data pipelines to integrate clinical data from EHRs, claims, and other healthcare sources for improved analytics and decision-making.
- Integrated EDI data with clinical and claims analytics, enhancing patient care insights, reducing claim denials, and improving reimbursement accuracy.
- Collaborated with payers and providers to optimize EDI workflows, reducing processing time and improving data accuracy for healthcare transactions.
- Implement Row-Level Security (RLS) and user access controls to restrict sensitive claims data visibility.
- Enforce governance policies for data usage, compliance, and privacy (e.g., HIPAA for healthcare claims data).
- Manage deployment pipelines for publishing and updating reports and datasets.
- Schedule and monitor data refreshes for claims analytics dashboards, ensuring real-time data availability.
- Monitor the performance of Power BI reports, dashboards, and datasets, addressing bottlenecks and optimizing resource usage.
- Ensured data security and compliance with HIPAA and other healthcare regulations while handling sensitive patient information.
- Troubleshoot issues related to data connections, refresh schedules, and visualizations to ensure system reliability.
- Manage Power BI capacity settings and monitor resource utilization to optimize performance.
- Oversee licensing and subscription plans to ensure proper user access across the organization.
- Act as a liaison between IT teams, business users, and claims analysts to address technical challenges.
- Create dashboards with claims metrics, including total claims processed, denial rates, claims cycle times, and provider/practitioner trends.
- Optimize reports by managing large datasets and employing best practices for data visualization and query performance.
- Provide support and training for Power BI users, promoting best practices in report development and usage.
- Provide actionable insights to improve claims adjudication efficiency and reduce processing errors.
- Ensure data accuracy and reliability through validation processes, testing reports, and collaborating with data governance teams.

Client: MUFG Bank, Jersey City, NJ

Mar 2023 -Sep 2023

Role: Data Analyst/ Power BI Developer

Project: Data Management Integrated Framework

Responsibilities:

- Configure and maintain the Power BI Service environment, including workspaces, datasets, and gateways.
- Implemented page-level, report-level, and visual-level filters in Power BI to meet specific reporting requirements.

- Conducted data analysis using SQL to support root cause investigations and validate data accuracy against source systems.
- Validated healthcare datasets with advanced Excel functions (e.g., VLOOKUP, INDEX-MATCH, conditional formatting) and created pivot tables, charts, and graphs for additional analysis.
- Developed complex T-SQL queries, including CTEs, subqueries, window functions, and joins for data extraction and analysis.
- Extensively involved in designing the Power BI reports and export data of flat file source to SQL Server database.
- Created multiple data visualization solution for initial Power BI environment business preview.
- Extracted data from On-Premises and SaaS (Software as a Service) into Power BI desktop.
- Published reports and dashboards to the Power BI service through the Office 365 integration.
- Created hierarchies in Power BI reports using visualizations like Bar chart, Line chart, etc.
- Worked with both live and import data into Power BI for creating reports.
- Built metric reports and identified the formulas and functionality of the dashboard reports and digitized the metric dashboards with Power BI service.
- Created new calculations, KPI's in Tabular cubes utilizing Data Analysis Expressions (DAX).
- Worked on Views, CTE's, schemas, permissions issues with client/server database design.
- Worked on all types of transformations that are available in Power BI query editor.
- Managed relationship between tables in Power BI using star schema.
- Optimize reports by managing large datasets and employing best practices for data visualization and query performance.
- Developed interactive Tableau dashboards and reports to visualize business performance, improving data-driven decision-making.
- Created basic data visualizations, filters, and calculated fields in Tableau to analyse trends and insights.
- Connected Tableau to various data sources, performed basic data transformations, and built user-friendly reports for stakeholders.
- Provide actionable insights to improve claims adjudication efficiency and reduce processing errors.

Client: Arch Insurance, Jersey City, NJ

May 2021 - Feb 2023

Role: Data Analyst/Power BI Developer

Project: Insurance Product and Risk Management

Responsibilities:

- Extensively involved in designing the Power BI reports and export data of flat file source to SQL Server database.
- Created multiple data visualization solution for initial Power BI environment business preview.
- Monitoring on jobs on daily basis as part of data management to make sure the business users have the data on premises.
- Extracted data from On-Premises and SaaS (Software as a Service) into Power BI desktop.
- Published reports and dashboards to the Power BI service through the Office 365 integration.
- Created hierarchies in Power BI reports using visualizations like Bar chart, Line chart, etc.
- Worked with both live and import data into Power BI for creating reports.
- Built metric reports and identified the formulas and functionality of the dashboard reports and digitized the metric dashboards with Power BI service.
- Created new calculations, KPI's in Tabular cubes utilizing Data Analysis Expressions (DAX).
- Worked on Views, CTE's, schemas, permissions issues with client/server database design.
- Worked on all types of transformations that are available in Power BI query editor.
- Managed relationship between tables in Power BI using star schema.
- Worked custom SQL queries to optimize the extracts and heavily relied on data blending as the end work books ultimately.
- Scheduled and maintained nightly and weekly loads of data by creating and scheduling the respective jobs.

Exilant Technologies, Bangalore, KA, India

Jan 2017- Oct 2020

Client: Milk Product

Role: SQL Developer and Data Analyst

Project Name: Milk Product and Sales Analysis

Responsibilities:

- Understand the ETL specifications and build the ETL applications like mappings daily.

- Involved in Data Analysis of source data and resolved data quality issues.
- Wrote T-SQL scripts to support ETL processes, including data staging, transformation, and loading into SQL Server data warehouse.
- Conducted data cleansing for legacy system migrations, performing validation testing to guarantee seamless transfers to new data warehouses.
- Performed the unit testing and data validation on the target tables.

Education and Certification

- Masters in information technology from MDS University, India.
- Bachelors in computer applications from MDS University, India.
- **Microsoft Certified: Power BI Data Analyst Associate-PL-300**
- Certificate diploma in Structured Query Language (SQL).
- Certificate diploma in Data Analytics.
- Certificate diploma in Power Bi Reporting.
- Attended various Webinars and Seminars as part of continued education.
