

RAMA KRISHNA REDDY MUKKALA

DevOps Engineer — AWS Cloud Infrastructure | CI/CD Pipelines | Banking & Financial Services

Atlanta, GA | +1 (334) 517-8811 | rmukkala.official@gmail.com | linkedin.com/in/rama-mukkala

PROFESSIONAL SUMMARY

DevOps and cloud engineer with 4+ years supporting AWS infrastructure, CI/CD pipelines, deployments, and monitoring for applications in banking, financial services, and healthcare. Hands-on with AWS (EC2, S3, RDS, IAM), Jenkins, Git, Docker, Linux, and shell scripting, with a track record of supporting releases, troubleshooting environment issues, monitoring systems and application logs, and maintaining operational documentation in secure, compliance-driven environments. Experienced collaborating with development teams to keep deployments reliable and environments stable.

TECHNICAL SKILLS

AWS Cloud: EC2, S3, RDS, IAM, VPC, EKS, CloudFormation, CloudWatch, Lambda, Route 53

CI/CD Pipelines: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, ArgoCD (GitOps)

Containers: Docker, Kubernetes, Helm, Amazon ECR, OpenShift

Linux & Scripting: Linux administration, Shell/Bash scripting, Python, YAML

Monitoring & Logging: CloudWatch, Prometheus, Grafana, ELK Stack, Splunk, Datadog

Cloud Security: IAM policies and access controls, HashiCorp Vault, Key Vault, SonarQube, Snyk, Trivy, Veracode, Checkmarx

Infrastructure as Code: Terraform, Ansible, AWS CloudFormation, ARM Templates

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, Jira, Confluence, Agile/Scrum, operational documentation and runbooks

PROFESSIONAL EXPERIENCE

Optum (UnitedHealth Group)

Aug 2025 – Present

DevSecOps Engineer

Remote, United States

- Own CI/CD pipelines (Jenkins, GitHub Actions, Azure DevOps) for 20+ clinical and operational applications, supporting deployments and releases that moved the team from weekly to near-daily release cadence.
- Monitor systems and application logs through centralized Splunk, Datadog, and Grafana dashboards; tuned alerting to reduce noise so incidents are caught earlier and on-call stays manageable.
- Embedded Veracode, SonarQube, and Snyk security scanning into pipelines so issues are caught before code review rather than in production; cleared the last two quarterly security audits with zero critical findings.
- Provision and manage cloud infrastructure through Terraform and ARM templates; moved deployments onto ArgoCD/GitOps for auditable, near-instant rollbacks across environments.
- Hardened Kubernetes (AKS) clusters — RBAC, secrets management via Key Vault, network policies — applying cloud security fundamentals across environments.
- Built Python and Bash automation for compliance validation and deployment orchestration, replacing weekly manual checks and cutting audit preparation from days to hours; maintain the associated operational documentation.

Wells Fargo

May 2024 – May 2025

DevOps Engineer Intern

Atlanta, Georgia, United States

- Supported AWS infrastructure and environments (EC2, S3, IAM, RDS) for internal banking applications, writing Terraform modules that brought environment setup down from hours of manual work to about twenty minutes and kept dev/test consistent.
- Assisted with CI/CD pipelines in Jenkins and GitHub Actions for the team's microservices, removing manual release steps and making staging deployments reliable and repeatable.
- Containerized internal applications with Docker onto Amazon EKS and added Snyk/Trivy security scanning, supporting secure deployment practices expected in a financial services environment.
- Monitored systems and application logs via Prometheus/Grafana dashboards, troubleshooting environment issues and noticeably reducing environment-related defects.
- Collaborated with development teams on deployments and releases and maintained operational documentation for pipeline and environment support.

Cognizant Technology Solutions

Apr 2022 – Jul 2023

Cloud & DevOps Engineer

Hyderabad, Telangana, India

- Drove DevOps for two US clients — including a financial services/banking client — automating CI/CD with Jenkins and GitLab CI across a dozen microservices and meaningfully shortening deployment cycles in secure, regulated environments.

- Ran Kubernetes across AWS EKS and Azure AKS with blue-green and canary deployment strategies; standardized infrastructure with Terraform and ARM templates, dropping environment provisioning from days to hours.
- Built the observability stack (Prometheus, Grafana, ELK) for monitoring systems and application logs, and tuned SLO-based alerting that sped up incident response.
- Added SonarQube and Checkmarx security gates plus Nexus artifact management to pipelines, improving code-quality compliance and giving full traceability on what shipped — key for financial-client audit requirements.
- Helped lead migration of legacy monolithic applications onto Kubernetes, raising release frequency from monthly to daily while trimming infrastructure cost.

Cognizant Technology Solutions

Jun 2021 – Mar 2022

Associate DevOps Engineer

Hyderabad, Telangana, India

- Supported AWS and Azure infrastructure for two US clients across production and staging environments, maintaining CI/CD pipelines (Jenkins, Azure DevOps, GitHub Actions) on a steady bi-weekly release cadence.
- Containerized legacy applications with Docker onto EKS and AKS; wrote reusable Terraform, CloudFormation, and Ansible, cutting provisioning time sharply and eliminating configuration drift.
- Set up Prometheus, Grafana, and CloudWatch monitoring and logging across environments; tightened IAM policies and access controls — cloud security fundamentals — to keep availability high.

Cognizant Technology Solutions

Jan 2021 – May 2021

DevOps Intern

Hyderabad, Telangana, India

- Assisted with CI/CD pipeline work in Jenkins and Git, and Docker containerization across multiple internal projects, contributing to more frequent, smoother deployments.
- Wrote Ansible playbooks and shell scripts on Linux to automate configuration and maintenance across team VMs; monitored basic infrastructure health and escalated issues to senior engineers.
- Maintained deployment runbooks and CI/CD operational documentation, standardizing team processes and shortening onboarding.

EDUCATION

Auburn University at Montgomery

Aug 2023 – May 2025

Master of Science in Computer Science

Montgomery, Alabama, United States

Relevant coursework: Advanced Database Systems, Data Structures & Algorithms, Advanced Operating Systems, Machine Learning, Python Programming, Cryptography, Web Application Development (Front-end and Back-end).

SRM University AP

Jul 2018 – May 2022

Bachelor of Technology, Electronics and Communication Engineering

Amaravathi, Andhra Pradesh, India

Relevant coursework: Computer Science and Programming, Data Structures & Algorithms in C, Web Technology, Data Communication, Digital Electronics, Industry-Standard Coding Practice.
