Professional Summary

- Senior DevOps Engineer with 7 years of experience designing, automating, and supporting enterprise cloud infrastructure, Kubernetes platforms, CI/CD pipelines, and Site Reliability Engineering (SRE) initiatives.
- Expertise in AWS cloud services including EKS, EC2, IAM, VPC, Route53, S3, CloudWatch, Lambda, ECS, and cloud-native architectures.
- Strong hands-on experience with Kubernetes, Docker, Helm, Kustomize, OpenShift, GitOps, and container orchestration supporting large-scale production environments.
- Proven experience building and optimizing CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, and ArgoCD reducing deployment time and improving software delivery reliability.
- Extensive experience implementing Infrastructure as Code (IaC) using Terraform, Terragrunt, CloudFormation, ARM Templates, and Ansible.
- Strong background in observability and monitoring using Prometheus, Grafana, Splunk, ELK Stack, Dynatrace, Datadog, CloudWatch, and OpenTelemetry.
- Hands-on expertise in automation using Python, Bash, Shell Scripting, PowerShell, and Infrastructure Automation frameworks.
- Extensive experience supporting Kafka, Redis, RabbitMQ, IBM MQ, event-driven architectures, and distributed systems.
- Proven success leading production support, incident response, root cause analysis, reliability engineering, disaster recovery, and platform modernization initiatives.
- AWS Certified DevOps Engineer and Certified Kubernetes Administrator (CKA) with expertise in Platform Engineering, Cloud Engineering, DevSecOps, and Enterprise Infrastructure Automation.

TECHNICAL SKILLS

Cloud Platforms: AWS, Microsoft Azure, Google Cloud Platform (GCP), Hybrid Cloud, Multi-Cloud Architecture

AWS Services: EKS, ECS, EC2, IAM, VPC, Route53, S3, CloudWatch, Lambda, RDS, DynamoDB, SNS, SQS, API Gateway, Auto Scaling, Elastic Load Balancer (ALB/NLB)

Containers & Orchestration: Kubernetes, Amazon EKS, Azure AKS, Google GKE, OpenShift, Docker, Helm, Kustomize, ArgoCD

DevOps & CI/CD: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, Bamboo, TeamCity, GitOps, Release Management

Infrastructure as Code: Terraform, Terragrunt, CloudFormation, ARM Templates, Bicep, Ansible

Programming & Scripting: Python, Bash, Shell Scripting, PowerShell, YAML, JSON, Groovy

Monitoring & Observability: Prometheus, Grafana, Splunk, Dynatrace, Datadog, ELK Stack, CloudWatch, Azure Monitor, OpenTelemetry

Messaging & Streaming: Kafka, Redis, RabbitMQ, IBM MQ, ActiveMQ

Security & DevSecOps: IAM, RBAC, Secrets Management, Vault, Container Security, Kubernetes Security, DevSecOps

Databases: PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, DynamoDB, Redis

Operating Systems: Linux (RHEL, Ubuntu, CentOS, Amazon Linux), Unix, Windows Server

Methodologies: DevOps, SRE, GitOps, Agile, Scrum, Platform Engineering, Production Support, Reliability Engineering

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer – Zions Bank Corporation – Salt Lake City, UT – Jun 2025 – Present

- Architected and administered AWS EKS platforms supporting mission-critical banking applications, cloud-native services, and enterprise microservices environments.
- Designed and implemented GitOps deployment frameworks using ArgoCD, GitHub, GitLab, Helm, and Kustomize, improving deployment consistency and reducing release failures by 45%.
- Developed reusable Terraform and Terragrunt modules provisioning secure AWS infrastructure across multiple environments while enforcing governance standards.
- Built and optimized CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI/CD, reducing deployment times from 2 hours to less than 15 minutes.
- Implemented Kubernetes security controls including RBAC, Network Policies, Secrets Management, Pod Security Standards, and IAM integration.
- Established enterprise observability solutions using Prometheus, Grafana, Splunk, Dynatrace, Datadog, and CloudWatch, improving incident detection and monitoring coverage by 60%.
- Automated infrastructure provisioning and operational workflows using Python, Bash, Terraform, and Ansible, significantly reducing manual operational effort.
- Supported Kafka-based event streaming platforms and distributed systems processing high-volume financial transactions.
- Led production incident response, root cause analysis, disaster recovery validation, and platform reliability initiatives maintaining 99.99% service availability.
- Collaborated with developers, architects, and security teams to improve platform scalability, deployment automation, and operational excellence.

AWS DevOps Engineer – Abbott Laboratories – Burlington, MA – Aug 2024 – May 2025

- Managed AWS cloud infrastructure supporting healthcare and pharmaceutical applications with strict security and compliance requirements.
- Administered Kubernetes environments on AWS EKS supporting containerized workloads and cloud-native healthcare applications.
- Implemented Infrastructure as Code solutions using Terraform and CloudFormation reducing infrastructure provisioning effort by 70%.
- Developed CI/CD automation pipelines using Jenkins, GitHub Actions, GitLab CI/CD, and Azure DevOps supporting rapid and reliable software delivery.
- Automated infrastructure and deployment workflows using Python, Bash, and Ansible improving engineering productivity and operational consistency.
- Implemented monitoring and observability solutions using Prometheus, Grafana, Splunk, Datadog, ELK Stack, and CloudWatch.
- Supported Docker containerization strategies, Helm deployments, and microservices modernization initiatives.
- Implemented DevSecOps controls including vulnerability remediation, secrets management, security scanning, and compliance automation.
- Supported production releases, incident response, root cause analysis, and operational readiness activities.
- Optimized AWS resource utilization and cloud governance processes resulting in measurable cost savings and improved performance.

DevOps Engineer – HCLTech – Hyderabad, India – Mar 2021 – Aug 2023

- Led cloud transformation and DevOps modernization initiatives for enterprise customers migrating workloads to AWS and Azure cloud platforms.
- Designed and managed Kubernetes, OpenShift, Docker, Helm, and Kustomize deployment platforms supporting large-scale production environments.
- Implemented enterprise CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, and GitOps methodologies.
- Developed Infrastructure as Code frameworks using Terraform, CloudFormation, ARM Templates, and Ansible supporting automated infrastructure management.

- Automated infrastructure provisioning, deployment orchestration, and operational workflows using Python, Bash, and PowerShell scripting.
- Implemented observability solutions using Prometheus, Grafana, Splunk, Dynatrace, Datadog, ELK Stack, and cloud-native monitoring platforms.
- Supported Kafka, Redis, RabbitMQ, and IBM MQ messaging systems powering distributed enterprise applications.
- Improved deployment frequency by 50% and reduced environment provisioning time by 65% through automation initiatives.
- Led incident management, root cause analysis, production support, and reliability engineering activities.
- Collaborated with development and infrastructure teams to improve cloud scalability, application resilience, and deployment reliability.

Cloud Engineer – Tech Mahindra – Hyderabad, India – Jun 2018 – Feb 2021

- Supported AWS cloud infrastructure, Linux administration, and enterprise DevOps operations across multiple business-critical applications.
 - Assisted with Kubernetes administration, Docker containerization, Helm deployments, and cloud-native application lifecycle management.
 - Developed Jenkins-based CI/CD pipelines improving software build, testing, and deployment automation.
 - Automated infrastructure management tasks using Python, Bash, Terraform, and cloud-native automation frameworks.
 - Implemented monitoring solutions using Prometheus, Grafana, Splunk, ELK Stack, and CloudWatch improving operational visibility.
 - Supported Linux and Windows server environments including administration, troubleshooting, patching, and performance tuning.
 - Assisted with AWS networking services including VPC, Route53, IAM, Load Balancers, VPN connectivity, and security controls.
 - Participated in cloud migration projects, infrastructure modernization initiatives, and platform optimization efforts.
 - Supported production applications, deployment troubleshooting, release coordination, and incident response activities.
 - Created technical documentation, operational runbooks, and deployment standards supporting enterprise IT operations.
-

CERTIFICATION

AWS Certified DevOps Engineer – Professional

EDUCATION

Master's in computer science | Rivier University |
