EXECUTIVE SUMMARY

- Over 8+ years of experience as a **Business Data Analyst** in **Retail, E-Commerce, Airlines, and Customer Engagement platforms**, with expertise in both **Agile Scrum** and **Waterfall methodologies**.
- Defined and managed **Product Backlogs** in **JIRA**, facilitating **backlog grooming, sprint planning, daily scrums, and retrospectives** to deliver incremental value aligned with **business priorities**.
- Authored **BRDs, FRDs, user stories, and acceptance criteria** for features spanning **POS workflows, API integrations, mobile UI flows, and cross-platform e-commerce functionality**.
- Collaborated with **architects and developers** on **solution designs, data flow diagrams, and integration mappings**, ensuring alignment between **front-end workflows** and **back-end systems**.
- Strong experience using **Google Analytics 4 (GA4), BigQuery, SQL, Tableau, Power BI, and Snowflake** to analyze customer behavior, measure digital performance, and deliver data-driven insights for product and marketing teams.
- Performed **source-to-target mapping (STTM)** for **POS, CRM, and e-commerce systems**, supporting **data migration and real-time synchronization** with **Snowflake, Oracle, and SQL Server** databases.
- Experienced in collaborating with **product, marketing, and engineering teams** to drive **insight-driven decision-making and improve customer-facing digital products**.
- Executed **SQL queries** for **data validation, transaction reconciliation, and reporting** across **large datasets**, ensuring accuracy in **order processing, inventory tracking, and customer records**.
- Created and maintained **performance dashboards** in **Power BI and Tableau** for **sales, fulfilment, and customer engagement metrics**.
- Managed **sprint test planning**, coordinated with **QA teams** to define **test data**, authored **test cases**, and validated **system behaviour** during **integration and UAT** phases.
- Partnered with **marketing, merchandising, and digital teams** to define **personalization, promotions, and SEO-driven e-commerce enhancements**.
- Proficient in tools and platforms including **JIRA, Confluence, MS Visio, Lucidchart, Power BI, Tableau, SQL Server, Snowflake, Oracle, Azure DevOps, and MS Office Suite**.
- Experienced in **cross-functional stakeholder management, requirements traceability, and delivering technology solutions** that meet both **functional and non-functional requirements**.
- Supported **A/B and multivariate** testing initiatives by analyzing experiment performance, measuring customer behavior, and providing recommendations to improve digital experiences.
- Adept at balancing **technical detail** with **business priorities**, ensuring solutions are **scalable, maintainable**, and aligned with **strategic goals**.

TECHNICAL SKILLS

- **SQL:** Advanced queries, joins, aggregations, data validation
- **Power BI & Tableau:** Dashboard development, data visualization, KPI reporting.
- **Digital Analytics:** Google Analytics 4 (GA4), BigQuery, Customer Journey Analysis, Behavioral Analytics, Conversion Funnel Analysis, KPI Tracking
- **Experimentation:** A/B Testing, Multivariate Testing, Conversion Optimization, Test-and-Learn Methodologies
- **BI & Reporting:** Tableau, Power BI
- **Databases:** SQL, Snowflake, SQL Server, Oracle
- **Agile Tools:** JIRA, Confluence, Azure DevOps

EDUCATION:

Bachelors in Computer Science and Engineering, Vignan Institute of Technology and Science, India
Masters of Science in Information Technology and Project Management, Indiana Wesleyan University, Marion, Indiana
Increasing Efficiency with Jira and Confluence Integrations.
SQL Server: Reporting Services.
Scrum: Advanced
SAFe Agilist

PROFESSIONAL EXPERIENCE

BEST BUY, RICHFIELD, MN

NOV 22 – TILL DATE

BUSINESS DATA ANALYST

Project 1:Supply Chain Management Process Improvement

Worked on end-to-end supply chain processes spanning procurement, inventory management, warehousing, and distribution to improve operational efficiency, streamline workflows, and enhance supply chain visibility.

Project 2 :Customer Insights & Personalized Marketing Platform (POS + CRM Integration)

The project focused on transforming POS, CRM, and loyalty data into a unified omnichannel customer analytics platform to enable personalized marketing, customer journey insights, and campaign performance reporting.

Responsibilities:

- Actively worked within the **Agile methodology** framework to deliver POS modernization and mobile/web platform enhancements on schedule and within scope.
- Defined and documented **loyalty program integration** requirements to increase customer engagement, ensuring POS and app systems supported rewards redemption in real time.
- Partnered with the **marketing and digital teams** to capture technical requirements for SEO-friendly product pages and promotional landing pages, enabling better search visibility through the e-commerce platform.
- **Prioritized the Product Backlog** in JIRA for POS, payment, and app enhancement features to ensure development focus on high-value initiatives aligned with business objectives.
- Conducted **customer journey analysis and behavioral analytics** to identify conversion opportunities and optimize digital experiences.
- Led **PBI grooming sessions** with the Scrum team, refining requirements into development-ready **Product Backlog Items (PBIs)** for POS workflows, inventory tracking, and checkout optimizations.
- Elicited, documented, and validated **business requirements** through user stories and acceptance criteria, ensuring clear communication between stakeholders and development teams.
- **Prioritized user stories and features** for multiple quarterly releases, ensuring alignment with omnichannel retail goals.
- Defined requirements for **customer segmentation and analytics dashboards**, enabling the analytics team to build models identifying conversion drivers.
- Introduced new **BI reporting views** in **Power BI** and **Tableau** for operational metrics, sales performance, and customer behavior analysis.
- Developed Tableau dashboards to track KPIs, campaign effectiveness, conversion funnels, and customer retention metrics.
- Leveraged **GA4, BigQuery, SQL, and Snowflake** to analyze customer journeys, digital engagement, and enterprise data, providing actionable insights to improve conversion and customer experience.
- Partnered with **Product, Marketing, and Engineering teams** to analyze A/B and multivariate test results, measure experiment performance, and recommend improvements to customer engagement and conversion.
- Managed **User Story lifecycle** in JIRA throughout development, testing, and deployment phases.
- Developed **interactive prototypes** to simulate POS transaction scenarios and app user flows, gathering stakeholder feedback early in the design phase.
- Performed detailed **data requirement analysis** and **source-to-target mapping (STTM)** for POS-to-Snowflake and app-to-backend integrations.
- Reviewed **stored procedures** and executed **SQL queries** in **SQL Server** to validate transactional data against Snowflake and Oracle data marts.
- Created and maintained **User Stories** in JIRA, tracked bugs, and coordinated fixes with development teams during sprints.
- Wrote complex **SQL queries** to create reporting views and validate data for customer behaviour and sales trend reports.
- Collaborated with the **QA team** to design **test cases**, define test data, and validate system behaviour during UAT.
- Supported **A/B testing and multivariate testing initiatives**, evaluating experiment results and measuring customer engagement and conversion performance.
- Facilitated **User Acceptance Testing (UAT)** by preparing test environments, training store associates, and supporting execution of acceptance scenarios.

ABERCROMBIE & FITCH, NEW ALBANY, OH

BUSINESS DATA ANALYST

AUG 2020 - OCT 2022

Project 1: Salesforce CRM & Commerce Cloud Integration for Retail Digital Experience Modernization

The project focused on integrating Salesforce CRM with Salesforce Commerce Cloud to unify customer data, enable a 360-degree customer view, improve personalization, optimize product catalog and order lifecycle management, and deliver customer journey, conversion, and sales analytics for enhanced digital commerce performance.

Project 2: Omnichannel E-Commerce Experience & Fulfillment Improvement

The project focused on enhancing omnichannel e-commerce and fulfillment processes by improving mobile and web shopping experiences, product information management, and order fulfillment workflows to support personalized customer journeys, faster order processing, and efficient cross-channel operations.

Responsibilities:

- Worked within the **Agile framework** across CRM migration and e-commerce enhancement projects, ensuring consistent delivery through iterative improvements.
- Developed and executed a **strategic plan** for implementing a **cloud-based CRM system**, consolidating website, call center, and order management into a unified platform.
- Led efforts to integrate **business intelligence** into customer data by defining reporting requirements, enabling actionable insights for customer engagement and operational decisions.
- Created **User Stories** and translated them into **Product Backlog Items (PBIs)** in JIRA, leading backlog grooming sessions for prioritization and sprint planning.
- Collaborated actively with the **Scrum Master** and **Product Manager** to monitor and prioritize backlog items for CRM workflows, SNKRS app features, and omnichannel e-commerce releases.
- Applied strategic thinking in **business process modeling** using **BPMN in Visio**, aligning current and future state workflows for ticketing, order fulfillment, and warehouse operations.

- Worked with business teams to define **opportunity attributes** such as budget, timelines, scope, and ROI for CRM and app enhancement initiatives.
- Created **Tableau and Power BI dashboards** to track digital KPIs, customer engagement, and campaign performance.
- Utilized **SQL, Snowflake, and BigQuery** to perform behavioral analytics and provide insight-driven recommendations for business stakeholders.
- Analyzed website and customer interaction data using **GA4, BigQuery, SQL, and Tableau** to generate insights and drive **continuous optimization of digital commerce experiences**.
- Focused on continuous improvement of **Agile/Scrum practices** to enhance delivery predictability and team efficiency.
- Participated in **Master Data Management (MDM)** activities, including **data modeling, ETL process definition**, and preparing **data mapping documents (STTM)** for CRM and e-commerce systems.
- Partnered with development teams to break down large user stories into manageable, testable technical tasks.
- Ensured **Scrum events** were conducted regularly, adhering to time-box schedules for stand-ups, planning, grooming, and retrospectives.
- Facilitated **Business Process Re-engineering (BPR)** workshops to optimize ticketing, returns, and shipping operations.
- Leveraged a broad range of tools and technologies including **Microsoft Project, MS Excel, MS Access, MS Visio, JIRA, Confluence, and SharePoint** for documentation and collaboration.
- Defined **source-to-target mapping** for CRM data migration, ensuring accurate transfer of accounts, cases, and order history from the legacy Oracle system.
- Managed defects in **JIRA**, assigning issues to development teams, tracking resolution progress, and validating fixes in test environments.
- Coordinated with the QA team to execute **test plans**, provide test data, review test cases, and track **test metrics**.
- Designed structured **functional testing** workflows, including review of **test scenarios, test cases**, and execution of **User Acceptance Testing (UAT)** for CRM and SNKRS app releases.

DELTA AIRLINES, ATLANTA, GA

BUSINESS ANALYST

MAR 2018 – AUG 2020

Project :Reservation & Ticketing System Enhancement with Loyalty Integration

Contributed to the enhancement of a legacy airline reservation and ticketing platform to improve booking efficiency and system reliability. Supported the integration of loyalty program features to create a more connected and seamless customer experience. Worked with cross-functional teams to gather and refine requirements aimed at improving agent workflows and simplifying call center operations. Assisted in strengthening backend processes to ensure accurate data flow and better system performance. Involved in testing and validation activities to support a smooth implementation and consistent user experience.

Responsibilities:

- Participated in **project management, systems analysis, and solution design** for the modernization of Delta's **Sabre-based ticketing and reservation system**, including **Passenger Name Record (PNR)** and **SkyMiles loyalty program** enhancements.
- Collaborated with stakeholders, call center agents, and senior business users to define requirements for **reservation tracking, queue management, and loyalty redemption workflows**.
- Developed and executed a **strategic plan** to improve both the **front-end UI** for reservation agents and the **back-end processing logic** to ensure faster transactions and reduced errors.
- Authored **Business Requirements Documents (BRD)**, **Functional Requirement Documents (FRD)**, and **Software Requirement Specifications (SRS)** to guide development of reservation, PNR, and loyalty program features.
- Applied **Business Process Re-engineering (BPR)** techniques to streamline booking, ticketing, and refund workflows, aligning them with the future-state reservation platform.
- Wrote **SQL queries** to extract and validate reservation, passenger, and loyalty data for analysis and reporting.
- Managed **business requirements** and the **product backlog** in **HP Quality Center** and **JIRA**, ensuring alignment with project milestones.
- Coordinated with the QA team to prepare **test plans**, generate **test data**, write **test cases**, and track **test metrics** for reservation and loyalty features.
- Designed SQL-based **test validation scripts** to verify data integrity during integration testing and UAT.
- Supported all testing phases, including **product testing, system integration testing (SIT)**, and **User Acceptance Testing (UAT)**, ensuring business requirements were fully met before deployment.

HYATT HOTELS CORPORATION, CHICAGO, IL

BUSINESS ANALYST

JAN 2017 - MAR 2018

This project focused on enhancing the guest experience across Hyatt properties by optimizing key service interactions. The work involved reviewing booking journeys, front-desk processes, room readiness, and guest feedback to pinpoint service gaps. Key enhancements included introducing mobile check-in capabilities, standardizing service protocols across participating Hyatt locations, and implementing a system to capture and utilize guest preferences for more personalized stays. These improvements resulted in smoother arrivals, more consistent service delivery, and a measurable uplift in overall guest satisfaction and operational efficiency.

Responsibilities:

- Involved with **project management, systems analysis, and design** of a **web-based application** to track and manage various **case and customer data**.

- Worked with **Stakeholders, Project Manager**, and senior **Business Users** in defining, documenting, and diagramming the **business needs** and **Business Process flow**.
- Authored **Business Requirement Document (BRD)**, **Functional Requirement Document (FRD)**, **Software Requirement Specifications (SRS)**, and **Functional Specification Documents (FSD)**.
- **Design** using **UML**, including development of **class diagrams**, **Sequence diagrams**, and **State diagrams** and implemented these diagrams using **MS Visio**.
- Prepared **Business Process models**, defined **present state flows** that cover “**AS-IS**” and then defined the **future state** that covers “**TO-BE**” diagram based on the requirements.
- Facilitated **business processes** and **re-engineering (BPR)** efforts and analyzed **user requirements**, attended **change request meetings** to document changes as per user’s request.
- Used **SQL queries** to extract **data** from the database to perform **data analysis**.
- Created & managed **Business Requirements, Product Backlog** in **HP Quality Center**.
- Regularly interacted with the **Testing team** for executing **Test Plans**, providing **Test Data**, creating **Test Cases**, and resolving issues upon detection of **bugs** and collecting the **Test Metrics**.
- Designed and implemented basic **SQL queries** for **QA testing** and **report/data validation**, set up definitions and process for test phases including **Product, Integration, System**, and **User Acceptance testing (UAT)**.
