

## Sai K

Sr. Full Stack Developer

+1 9728610237

kanrahuldo3@gmail.com

<https://www.linkedin.com/in/srrrk/>

---

### PROFESSIONAL SUMMARY:

- Over **8+ years** of experience designing and developing **enterprise web applications** and **distributed systems** across **FinTech, e-Commerce** and large-scale consumer platforms.
- Strong backend engineering across **Java/Spring Boot, Python and Node.js ecosystems**, specializing in microservices, API-first design, and production-grade engineering practices.
- Developed performance-focused services and automation using **Go**, enabling high-throughput workflows and reliable operational tooling.
- Extensive frontend delivery using **Angular** with **TypeScript, RxJS, NgRx, Angular Material**, and dashboard modules using **React (Hooks)**.
- Implemented security using **Spring Security, OAuth2/OIDC, JWT**, and **mTLS**, aligned with enterprise compliance and RBAC controls.
- Built and deployed cloud systems across **AWS, Azure**, and **GCP**, with containerization using **Docker** and orchestration using **Kubernetes**.
- Strong CI/CD delivery using **Jenkins, GitHub Actions, Azure DevOps**, plus IaC using **Terraform** and **CloudFormation**.
- Production observability using **OpenTelemetry, CloudWatch, Azure Monitor, GCP Cloud Monitoring**, and dashboards using **Prometheus/Grafana**.
- Leveraged GenAI-assisted tools including **GitHub Copilot, Claude Code**, and **Codex** to accelerate development cycles, optimize code quality, and streamline complex engineering workflows.

### TECHNICAL SKILLS:

|                              |                                                                                                                             |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Operating Systems</b>     | Linux; Windows; macOS                                                                                                       |
| <b>Languages</b>             | Java (8/11/17/21); Kotlin; Go; TypeScript; JavaScript; SQL; Python                                                          |
| <b>Backend Frameworks</b>    | Spring Boot (1/2/3); Spring MVC; Spring WebFlux; Spring Security; Spring Cloud; Spring AI; Hibernate/JPA; Node.js; C#, .Net |
| <b>API &amp; Integration</b> | REST; gRPC; GraphQL; OpenAPI/Swagger;                                                                                       |

|                              |                                                                                                                                                                                                                                                       |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                              | OAuth2/OIDC; JWT; mTLS; JSON                                                                                                                                                                                                                          |
| <b>GenAI / LLM</b>           | Spring AI; AWS Bedrock; RAG; Embeddings; Vector Search (OpenSearch); Prompt Templates; Guardrails/PII-safe logging patterns                                                                                                                           |
| <b>Frontend</b>              | Angular (5–17); TypeScript; RxJS; NgRx; Angular Material; React (Hooks); Redux Toolkit; HTML5; CSS3/SCSS                                                                                                                                              |
| <b>Messaging / Streaming</b> | Kafka; AWS SQS; AWS SNS; EventBridge; Kinesis; GCP Pub/Sub                                                                                                                                                                                            |
| <b>Databases / Cache</b>     | PostgreSQL; MySQL; Aurora; DynamoDB; MongoDB; Redis/ElastiCache                                                                                                                                                                                       |
| <b>Search / Logging</b>      | OpenSearch/Elasticsearch; Kibana                                                                                                                                                                                                                      |
| <b>Cloud</b>                 | AWS (EKS, ECS/Fargate, Lambda, API Gateway, S3, RDS/Aurora, DynamoDB, IAM, KMS, Secrets Manager, CloudWatch, WAF, Bedrock); Azure (AKS, App Service, Azure AD, Key Vault, Azure Monitor); GCP (GKE, Cloud Storage, Pub/Sub, Cloud Logging/Monitoring) |
| <b>DevOps / IaC</b>          | Docker; Kubernetes; Helm; Terraform; CloudFormation                                                                                                                                                                                                   |
| <b>CI/CD &amp; Quality</b>   | Jenkins; GitHub Actions; Azure DevOps Pipelines; SonarQube; Snyk                                                                                                                                                                                      |
| <b>Observability</b>         | OpenTelemetry; CloudWatch; Prometheus; Grafana                                                                                                                                                                                                        |
| <b>Testing</b>               | JUnit 5; Mockito; Testcontainers; WireMock; Pact; Postman/Newman; Cypress/Playwright                                                                                                                                                                  |
| <b>Tools</b>                 | IntelliJ; VS Code; Jira; Confluence; Postman; Git; Copilot; Codex; Claude Code                                                                                                                                                                        |

## WORK EXPERIENCE:

**JP Morgan Chase,  
Sr. Developer**

**September 2024 – Till Date**

### Responsibilities:

- Owned delivery across requirements, design, development, testing, and releases in Agile/Scrum.

- Built backend services using **Java** and **Spring Boot**, improving modularity and reducing release risk via cleaner service boundaries.
- Developed API layers using **REST** and **gRPC**, maintaining standards for **OpenAPI**, versioning, validation, and consistent error models.
- Implemented authentication and authorization using **Spring Security**, **OAuth2/OIDC**, **JWT**, and **mTLS** for secure enterprise workflows.
- Delivered workflow-heavy UI modules using **Angular**, **TypeScript**, **RxJS**, and predictable state using **NgRx**.
- Built admin/dashboard modules using **React (Hooks)** and **TypeScript** to speed up modular UI delivery.
- Implemented a GenAI-enabled internal productivity workflow using **Spring AI** with **AWS Bedrock**, applying **RAG** over controlled enterprise knowledge sources and enforcing **audit logging** and secure access patterns.
- Implemented async processing using **Kafka** and **AWS SQS/SNS**, improving reliability with retries, DLQ handling, and idempotency patterns.
- Improved API performance by ~**30–40%** through **JPA/Hibernate** tuning, indexing strategies, and query optimization.
- Reduced p95 latency for high-read paths by ~**25%** using **Redis** caching and optimized data access patterns.
- Containerized services using **Docker** and deployed on **Kubernetes (EKS)** using **Helm** for repeatable releases.
- Automated CI/CD using **Jenkins** and **GitHub Actions**, enforcing quality gates using **SonarQube** and security scans using **Snyk**.
- Implemented observability using **OpenTelemetry** with actionable metrics and alerts via **CloudWatch**.

#### ENVIRONMENT:

Java 17/21, Spring Boot 3, Spring Security, Spring AI, AWS Bedrock, REST, gRPC, OpenAPI, Kafka, AWS (EKS, S3, RDS/Aurora, DynamoDB, SQS/SNS, IAM, KMS, Secrets Manager, CloudWatch, WAF), Docker, Kubernetes, Helm, Terraform, Angular 16/17, React, TypeScript, RxJS, NgRx, Redis, JUnit 5, Mockito, Testcontainers, Jenkins, GitHub Actions.

**Amazon**  
**Software Development Engineer**

**October 2022 – August 2024**

#### Responsibilities:

- Delivered distributed services end-to-end: design, implementation, testing, deployment, and operational support.

- Built services using **Java** and **Kotlin**, improving reliability with clearer boundaries, defensive coding, and scalable APIs.
- Implemented internal APIs using **gRPC** and **REST**, aligning contract consistency and operational behavior across integrations.
- Developed automation and performance-sensitive tooling using **Go**, improving operational workflows and reducing manual toil.
- Implemented event-driven processing using **Kafka**, improving throughput and decoupling service dependencies.
- Designed access patterns for **DynamoDB** and **Aurora PostgreSQL**, improving performance via index tuning and query shaping.
- Reduced backend read latency by ~**20–30%** using **Redis/ElastiCache** caching for hot paths.
- Implemented AWS security controls using **IAM**, encryption with **KMS**, and secrets management with **Secrets Manager/SSM**.
- Containerized and deployed services using **Docker** and **EKS/ECS**, following safe rollout and rollback practices.
- Provisioned infrastructure using **Terraform** and **CloudFormation** to ensure repeatable, auditable environments.
- Implemented observability using **OpenTelemetry** and production monitoring using **CloudWatch** dashboards and alerts.
- Built automated testing using **JUnit 5**, **Mockito**, and integration testing using **Testcontainers/WireMock**.
- Implemented contract testing using **Pact** to prevent cross-service regressions.
- Delivered internal operational UI modules using **Angular** and **React** with **TypeScript** for configuration and operations workflows.

#### **ENVIRONMENT:**

Java 17, Kotlin, Go, REST, gRPC, Kafka, AWS (EKS/ECS, Lambda, API Gateway, DynamoDB, Aurora, S3, SQS/SNS, IAM, KMS, Secrets Manager, CloudWatch), Docker, Kubernetes, Terraform, CloudFormation, OpenTelemetry, Angular, React, TypeScript, JUnit 5, Mockito, Testcontainers, WireMock, Pact.

**Paypal, Bengaluru, KA, India**  
**Software Engineer**

**Aug 2019 – July 2022**

Responsibilities:

- Built backend services using **Java** and **Spring Boot**, delivering reusable modules and scalable APIs.
- Developed **REST** APIs with **OpenAPI/Swagger**, enforcing consistent validation, versioning, and error handling standards.
- Implemented secure access using **Spring Security**, **OAuth2/OIDC**, and **JWT** aligned with enterprise RBAC controls.
- Delivered enterprise UI modules using **Angular** with **TypeScript** and **RxJS**, building reusable components and shared modules.
- Implemented predictable state management using **NgRx** for workflow-heavy experiences.
- Built dashboard modules using **React (Hooks)** with **TypeScript** for modular UI delivery.
- Implemented async processing using **Kafka**, improving reliability through retry/DLQ patterns.
- Developed batch/automation utilities using **Go** for performance-sensitive workflows.
- Improved query performance and throughput using **Hibernate/JPA** tuning and indexing strategies on **PostgreSQL/MySQL**.
- Improved response times by ~**25%** using **Redis** caching and reducing database contention.
- Containerized services using **Docker** and deployed via **Kubernetes** with environment-based configuration.
- Implemented enterprise platform integrations using **AWS**, **Azure**, and **GCP** patterns for identity, storage, and messaging.
- Automated CI/CD using **Jenkins** and **Azure DevOps**, enforcing quality gates using **SonarQube**.

#### ENVIRONMENT:

Java 8/11, Spring Boot 2, Spring Security, REST, OpenAPI, Angular 8, React, TypeScript, RxJS, NgRx, Kafka, C#, ASP.NET Core, Go, PostgreSQL/MySQL, Hibernate/JPA, Redis, Docker, Kubernetes, Jenkins, Azure DevOps, AWS/Azure/GCP.

**Electronic Arts , Bengaluru, KA, India**  
**Software Engineer**

**Jan 2018 – July 2019**

#### Responsibilities:

- Worked in **Agile** teams to deliver enhancements for web applications and internal tooling.
- Developed backend services using **Java 8** and **Spring** with reusable components and clean layering.

- Built APIs using **REST** and documented endpoints using **Swagger** standards common for the timeframe.
- Delivered UI features using **Angular** with **TypeScript**, building reusable components and shared modules.
- Built internal dashboard modules using **React** with component-based patterns for admin workflows.
- Implemented scheduled processing using **Quartz** and **Spring Scheduling** for periodic workflows.
- Improved DB performance using query optimization and indexing with **Hibernate/JPA**.
- Standardized builds using **Maven/Gradle** and CI pipelines using **Jenkins**.
- Implemented containerized dev/test environments using **Docker**.
- Supported cloud deployments using **AWS (EC2, S3, RDS)**.
- Strengthened automated testing using **JUnit** and **Mockito** to improve release stability.

**ENVIRONMENT:**

Java, Spring, JSF, JSP 2.0, AWS, Apache MyFaces, JMS, Hibernate, LDAP, JNDI, UDDI, WSDL, SOA, SOAP, UML, XML, HTML, Log 4j, Web Sphere 7.0, RAD 8.0, Oracle, SunOS UNIX, Shell Script, CVS, Ant, Windows XP.
