

PROFESSIONAL SUMMARY:

- Dedicated Java Full Stack Developer with 4 years of experience in designing, developing, and implementing robust enterprise applications.
- Proficient in the entire software development life cycle (SDLC), from requirements analysis to deployment.
- Expertise in cloud platforms AWS, microservices, and agile methodologies.
- Having extensive GUI design development capabilities for different applications using HTML5, CSS, AJAX, JavaScript, XML, Ext.Js, and AngularJS.
- Expert in Java/JavaScript programming. Experience with NodeJs and ReactJs.
- Expertise in the implementation of Core concepts Java, J2EE Technologies: JSP, Servlets, and frameworks like Spring MVC, Spring Security, Spring Boot, Spring Data, Spring Mail, spring validation, Spring JDBC, Hibernate.
- Expertise in Web Front End Technologies JavaScript, Java Server JQuery, Ajax Angular 9.0, HTML, CSS.
- Experience in developing a web application using Angular 6. Highly used Angular 9 router to build single-page applications for navigating through the different statuses and multiple models.
- Experience in using build/deploy tools such as **Jenkins, Docker, and OpenShift** for Continuous Integration & Deployment for Microservices.
- Developed a POS system works by connecting your credit card processing apps, accounting apps, inventory apps, and other point of sale-related business apps into a single unit.
- Experience in optimizing React.js applications for performance, including code splitting, lazy loading, and caching techniques.
- Extensive experience in developing interactive and responsive web applications using React.js.
- Proficient in JavaScript and ES6+ syntax, leveraging the power of modern JavaScript features in React.js development.
- Experience using Spring Framework modules like Spring Core container for Dependency Injection, Application context, Spring ORM and POJO objects.
- Worked extensively in J2EE JSP, Servlets, JDBC, Struts, Spring, MVC, Hibernate, Java- Networking, RMI, Web Sphere, XML and well versed with Oracle database, OS Concepts
- Good Knowledge of using IDE Tools like Eclipse, NetBeans for Java/ J2EE application development.
- Extensive Knowledge in Data Modelling, administration and development using SQL and PL/SQL in Oracle, MY-SQL, MS SQL Server, DB2 and SQL Server environments.
- Implemented near real time data pipeline using framework based on Kafka, Spark.
- Extensive experience in using Ant, Maven and Gradle for build automation.
- Expertise in using version control and configuration management tools like CVS and SVN, GIT.
- Implemented Unit Testing using JUnit and Integration testing during the projects.
- Exposure on cloud service-related databases like PostgreSQL and MongoDB.
- Extensively followed agile software development process & Test-Driven development approach.

Key Competencies:

- Full Stack Development
- Java/J2EE Technologies
- Spring Framework (Boot, MVC, Security)
- Web UI Development (Angular, React)
- Microservices Architecture
- Cloud Computing AWS

- RESTful Web Services
- Database Management (SQL, NoSQL)
- DevOps Practices (Jenkins, Docker)

TECHNICAL SKILLS:

Languages: Java, JavaScript, Python, SQL

Web Technologies: Angular, HTML5, CSS3, JavaScript, AJAX, jQuery, ReactJS

J2EE Technologies: Servlets, JSP, Spring Framework, Spring Boot

Frameworks: Struts, Spring, Hibernate, Apache Camel

Databases: Oracle, MongoDB, DynamoDB, MySQL, MS SQL Server

Web/App Servers: WebLogic, Tomcat, JBoss

Web Services: RESTful, SOAP, JAX-RS, JAX-WS

Cloud Platforms: AWS

Version Control: Git, Bitbucket

Tools: Eclipse, Jenkins, Maven, JIRA

Methodologies: Agile, Scrum

Operating Systems: Windows, UNIX, Linux

EDUCATION

M.S. Data Science

Aug 2021- May 2023

University of North Texas, Denton, Tx.

Bachelors in Electronics and Communication Engineering

Jul 2016 - Jun 2020

Sreenidhi Institute of Science and Technology, Hyderabad.

PROFESSIONAL EXPERIENCE:

Client: Fiserv, New Jersey

Role: Java Full Stack Developer

Mar 2024 to Till Date

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like requirement gathering, Design, Analysis and Code development.
- Worked on migrating on premises oracle database to PostgreSQL using AWS cloud servers.
- Worked in agile framework as an individual contributor Responsibilities include - Interaction with Business team in story grooming, reviewing story/acceptance criteria.
- Used Java17 features like streams and Lambda expressions and Maintained Interface compatibility and concurrency in the project using Java 17 new features like default, static methods, and Concurrency API.
- Handled complex POS Peripheral requirements for integrating the POS peripherals with the TILL, BO and CI modules using JPOS software and Linux commands.
- Conducted unit testing and integration testing for **java** and **C++** modules, utilizing **Junit** and **TestNG** to ensure **code quality** and **system stability**.
- Optimized the code using smart pointers and C++ Standard template library.
- Developed UI event handlers and AJAX callback code using Sencha Ext JS/Touch.
- Created TypeScript reusable components and services to consume REST API's using Component based architecture provided by angular 15.
- Configured Log 4j for debug, error, and info log statements.
- Developed the application Using Java Server Faces Ext JS tag libraries.

- Implemented custom loader using Ngx-spinner pm module.
- Strong in Java/J2EE design patterns and other object-oriented concepts (OOPS) and worked on Java 8/11/17 versions.
- Worked extensively in migrating an application from Angular JS to Angular 9/12.
- Enhanced performance of various SQL's by analyzing SQL's performances by executing DB2.
- Worked on AWS Elastic Load Balancing, created EC2 instances and worked on autoscaling the instances.
- Used Git for version control of the application and JIRA for issue tracking of the application.
- Performed form validations using reactive forms from the Angular 9 framework.
- Integrated payment gateways from vendors Innoviti, Unipay, Plutus into the POS application using request and response-based API Jar files for all the payment card types.
- Developed the front end by, Query, Twitter Bootstrap and Ajax utilized Used Dropwizard frameworks.
- Used CFT templates for creating AWS stack, S3 buckets, Roles, and Policies
- Developed REST APIs for notification service using Dropwizard.
- Used web services (Restful) for transmission of large blocks of XML/JSON.
- Experience in building isomorphic applications using Angular.js and Redux with GraphQL on server side.
- Involved in design and development of GraphQL and services to interact with data storage layer.
- Developed single page applications (SPA) using frameworks like Angular JS, Node JS, and Bootstrap.
- Used Scala Test for writing test cases and coordinated with QA team on end-to-end testing.
- Used Micro service architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka message brokers and worked with Kafka Cluster using Zookeeper.
- Worked on Rest Web services for backend services, used Couchbase DB (NoSQL) for database services.
- Developed REST APIs using Scala and Play framework to retrieve processed data from relational database.
- Implemented Spring boot microservices to process the messages into the Kafka cluster setup.
- Maintained, structured, and surveyed documents within the NoSQL MongoDB database, ensuring data integrity, correcting anomalies, and increasing the overall maintainability of the database.
- Used Spring Kafka API calls to process the message smoothly on Kafka cluster setup.
- Worked with containerization tools, can implement transition to Docker and develop distributed cloud system using Kubernetes and Helm package manager for Kubernetes.
- Supported Legacy application which was built on Spring Framework modules such as Spring MVC, Spring IOC, AOP and Spring JDBC, Spring Data, Spring REST, Spring IO, Spring Security, Spring Boot with Thyme leaf template.
- Having Knowledge on Kibana and Elastic Search to identify the Kafka message failure scenarios.

Environment: Java 17, J2EE, C++, Angular 9/15, HTML5, CSS3, TypeScript, Ext JS, Jest, Bootstrap, Log4j, Redux, GraphQL, AWS, Spring, Spring boot, XML, JSON, Dropwizard, Docker, Kubernetes, Kafka, Git, NOSQL, DB2, Apache Tomcat 8.5, GitLab, Eclipse IDE.

Client: Centene, Dallas, TX

Role: Java Full Stack Developer

Oct 2023 to Feb 2024

Responsibilities:

- Developed dynamic UI forms and pages using HTML5, CSS3, Bootstrap, JavaScript, and jQuery3.4.
- Utilized Angular 9/12 to create efficient UI components, incorporating dependency injection, models, data binding, and controllers.
- Leveraged Java 8 features, including Lambda Expressions, Functional interfaces, and Stream APIs for enhanced collection, concurrency, and IO operations.
- Integrated Maven with the CI/CD pipelines for automated build processes, ensuring that the project artifacts were built efficiently and reliably.
- Seamlessly integrated MySQL with Spring Boot and Hibernate ORM framework, leveraging features like Spring Data JPA to simplify database operations and improve developer productivity.
- Implemented MySQL backup and recovery strategies, including regular backups, point-in-time recovery, and disaster recovery planning, to safeguard data against loss and minimize downtime in case of failures.

- Designed and consumed Restful web services, implementing modular structures and REST-based Microservices using Spring Boot, Spring Security, and Spring Data JPA.
- Collaborated with the Linux system administration team for deploying and maintaining Java applications on Linux servers.
- Leveraged AWS Lambda for serverless computing to execute code in response to events without provisioning or managing servers.
- Utilized AWS DynamoDB for NoSQL database needs, ensuring seamless scalability and high availability.
- Demonstrated expertise in the Spring framework, covering Dependency Injection, IOC, AOP, and integration with Hibernate.
- Implemented both batch and real-time data pipelines using Spark and integrated with Apache Kafka for data ingestion and processing.
- Developed server-side applications using Node.js, leveraging its asynchronous and event-driven architecture for efficient handling of I/O operations.
- Utilized npm for dependency management and to integrate various libraries and modules into the Node.js application.
- Proficiently handled Flink for stream processing and event time processing and integrated Spark with Apache Kafka for data ingestion and real-time processing.
- Implemented HL7 interfaces for standardized data exchange with medical instruments.
- Adhered to Test Driven Development (TDD) using JUnit for creating test cases.
- Utilized Log4J2 for comprehensive logging across UI and Domain Levels.
- Demonstrated expertise in test planning, automation, and execution using Selenium RC, TestNG, and Junit.
- Developed and maintained complex stored procedures for efficient data retrieval and manipulation.
- Implemented Entity beans for interaction with IBM DB2 in the persistence layer.
- Deployed applications on AWS using services like Elastic Beanstalk for simplified deployment and management of Java applications.
- Utilized AWS Elastic Kubernetes Service (EKS) for container orchestration and deployment of Docker containers.
- Configured CI/CD pipelines on AWS using AWS CodePipeline and AWS CodeBuild for automated build, test, and deployment processes.
- Utilized Maven as the build automation tool and dependency management system for Java projects, ensuring project consistency, and managing project dependencies effectively.
- Integrated AWS CodeDeploy for automated application deployments to AWS infrastructure.
- Implemented Git hooks to automate pre-commit checks, ensuring code quality standards were met before committing changes to the repository, thus enhancing the overall codebase stability and reliability & integrating Git with CI/CD pipelines.

Environment: HTML5, CSS4, JavaScript, Ajax, Angular 9/12, Java 8, Spring Boot, Spring MVC, Spring Data JPA, Restful Web Services, Microservices, Apache Kafka, AWS, Docker, Kubernetes, Hibernate 5.2, GitHub, Log4j2, IBM DB2, JUnit, Maven, Jenkins, NodeJS

Client: Innovation Systems, Bangalore, India

Role: Software Developer

Jan 2019 to Jul 2021

Roles and Responsibilities:

- Involved in backend Core Java 8 programming. Used Core Java concepts such as Collections, Generics, Multi-Threading and actively coded most of the Core Java implementations.
- Developed various pages in the applications in front end technologies HTML5, CSS3-SASS, JSON, React JS and NodeJS.
- Configured Spark Streaming to get information from Kafka and store stream information to HDFS.
- Implemented Spark using Scala and utilization Data frames and Spark SQL API for faster processing of data.
- Created and configured the continuous delivery pipelines for deploying microservices and lambda functions using the continuous integration/deployment CI/CD Jenkins server.
- Implemented Snapshot testing using Jest for React project along with Enzyme test utilities.

- Proficient in JavaScript and ES6+ syntax, leveraging the power of modern JavaScript features in React.js development.
- Extensively involved in Data Center Migration and Disaster Recovery plans and implementation of Oracle Data guard.
- JSP. Template development for a Java 8, Object-Oriented Analysis based search platform using JSP/JSTL.
- Experience in writing **ANT**, **Maven** build scripts, providing logging facility using Log4j and Writing JUnit test cases.
- Highly proficient in writing lambda functions to automate tasks on AWS using CloudWatch triggers, S3 events as well as DynamoDB streams and kinesis streams.
- Created GraphQL schema and queries to interact with Mongo DB database.
- Implemented an express-GraphQL library to mount a GraphQL API server on the user-configured HTTP endpoint.
- Worked on AWS Elastic Load Balancing, created EC2 instances and worked on autoscaling the instances.
- Developed user interface by using React JS, Flux for SPA development.
- Experienced in implementing Spark using Scala and Spark SQL for faster testing and processing data responsible to manage from different sources.
- Used **JIRA** for defect management and to keep track of bugs and issues.
- Consumed REST based Micro services with Rest template based on Restful APIs.
- Worked on Agile Methodology that includes weekly meeting with business analysts and monthly sprint review with clients.
- Used Spring Boot to collect data from users and packaged the data as JSON distributed to applications.
- Developed REST APIs using Scala and Play framework to retrieve processed data from Cassandra database.
- Experience in building real time Data Pipelines with Kafka connect and Spark Streaming.
- Created Kafka producer API to send live-stream data into various Kafka topics.
- Improved the performance of Kafka cluster by fine tuning the Kafka configurations at producer, consume, and broker level.
- Deployed Kafka to get better insight into our Kafka Clusters.
- Implemented to reprocess the failure messages in Kafka using Offset id.
- Used connection pooling for optimization using JDBC interface. Developed processing component to retrieve customer information from MySQL database, developed DAO layer using Hibernate.
- Working with **Rx Java** (Reactive) for asynchronous composition and manipulation of data and events using Observers and Observables in the application.
- Wrote prepared statement and called stored Procedures using callable statements in MySQL.
- Worked on NodeJS to send server-side Rest services call to Web Application and Integrated with Mongo DB.
- Used MAVEN for developing build scripts and deploying the application onto WebLogic.
- Involved in configuring builds using Jenkins with GIT and used Jenkins to deploy the applications onto Dev, QA environments.
- Involved in unit testing, system integration testing and enterprise user testing using JUnit.

Environment: Java, Python, Spring, JSP, JSTL, Scala, Spark, Spark SQL, Kafka, Cassandra, Enzyme, GraphQL, Restful Web Services, MongoDB, JMS, Jenkins, React JS, Spring Boot, Aws, tomcat.
