

Santosh Khatri Data Analyst

santosh@workwebmail.com | (475)280-0168 | USA | [Linkedin](#)

Summary

Data Analyst with 3+ years of experience delivering measurable business impact across fintech, consulting, and technology. Drove \$1.2M fraud loss prevention through ML-based risk modeling, 30% cloud cost reduction through ETL and query optimization, and identified 22% customer abandonment informing revenue recovery and retention strategy. Advanced expertise in SQL, Python, AWS (Glue, Athena, Airflow, Lambda), ML modeling (ARIMA, Prophet, LSTM), A/B testing, and executive-ready Power BI & Tableau dashboards translating complex data into decisions.

Technical Skills

- **Programming & Querying:** Python, SQL, VBA, R (forecasting & statistical modeling)
- **Data Engineering & ETL:** AWS Glue, Athena, Lambda, Airflow; Azure Synapse
- **Data Quality & Testing:** AWS Deequ, Python-based validation, automated ETL checks
- **Analytics & BI Tools:** Power BI (DAX, drill-through, KPI cards), Tableau
- **Machine Learning & Forecasting:** ARIMA, Prophet, LSTM, clustering, regression, correlation analysis
- **Cloud & Big Data:** AWS (ETL, Lambda, Athena), Azure Synapse, large-scale data pipelines

Professional Experience

Data Analyst, Upstart

02/2025 – Present | Remote, California, USA

- Prevented over \$1.2M in potential fraud losses across 500K daily transactions. Improved ML-driven risk detection accuracy by 18% through collaboration with Fraud and Product teams to refine rules logic.
- Reduced AWS cloud costs by 30% by optimizing Athena partitioning and compression strategies. Improved query performance by 70%, accelerating enterprise analytics workflows organization-wide.
- Cut false-positive fraud alerts from 200 to 170 daily (15% reduction) by conducting rigorous A/B testing on rule thresholds while maintaining precision and investigation quality.
- Translated fraud risk signals into scalable analytical solutions by aligning Fraud, Product, and Engineering teams, diagnosing root causes, and enabling faster decision-making on mitigation strategies.
- Shortened analyst review cycles by 1 hour daily by automating ETL pipelines using Airflow, AWS Glue, and Athena to clean, join, and aggregate fraud datasets for reliable operational reporting.
- Enabled data-driven leadership decisions by designing Power BI dashboards with drill-downs on rule performance, incident clusters, and analyst workload, supporting weekly operational and strategic reviews.

Data Analyst, McKinsey & Company

03/2024 – 02/2025 | Remote, California, USA

- Identified 22% post-purchase customer abandonment through funnel and cohort analysis. Enabled checkout redesigns and targeted retention initiatives, driving measurable revenue recovery.
- Improved campaign conversion and engagement by performing customer segmentation using clustering techniques. Delivered personalized marketing strategies and targeted messaging across digital channels.
- Discovered a 28% engagement lift in B2 customer response by analysing channel performance. Revealed that email campaigns outperformed social media for conversions and sustained interactions. Delivered a 25% ROI uplift among high-value customers by building Power BI dashboards with DAX-based segment ROI metrics, drill-through filters, and KPI cards for executive decision-making.
- Enhanced analytics accuracy by 18% through ETL validation and automated data quality checks using AWS Glue and AWS Deequ, ensuring reliable insights and trusted reporting.
- Converted ambiguous business problems into structured analytical frameworks by collaborating with cross-functional stakeholders, diagnosing root causes, and translating insights into strategic recommendations for business decision-making.

Data Analyst, State Street Corporation

11/2022 – 12/2023 | Remote, California, USA

- Delivered portfolio performance analysis and optimization by collaborating with portfolio managers, risk teams, and IT in Agile environments, identifying key return drivers and recommending data-backed allocation improvements.
- Improved query performance by 40% using advanced SQL (CTEs, window functions) on AWS Athena and built scalable ETL workflows with AWS Glue for structured CSV and Parquet datasets.
- Conducted EDA and statistical modeling (correlation, regression) to uncover relationships between asset classes, market conditions, and returns, identifying key performance drivers with 85% confidence.
- Developed risk analytics using Python (Pandas, NumPy, SciPy, Statsmodels), calculating Sharpe Ratio, Alpha, Beta, and performing scenario analysis and stress testing for portfolio resilience.
- Enhanced data accuracy by 25% through automated ETL validation using AWS Glue and Lambda, and built Power BI dashboards with advanced DAX metrics, reducing reporting time by 30% and enabling real-time decision-making.

Education

Master's in Business Analytics, California State University- East Bay, California, USA

01/2024 – 05/2025

Certifications

- [Oracle Database SQL Certified Associate](#)
