(404) 981-6745 | shivam.d@mailjobhub.com | LinkedIn | Atlanta, GA

SUMMARY

Healthcare Data Analyst with 5+ years of experience analyzing healthcare claims, EHR, patient, provider, pharmacy, and clinical data to support patient outcomes, healthcare operations, utilization analysis, and reporting. Skilled in SQL, Python, SAS, Power BI, Snowflake, and healthcare data integration, with experience working with ICD-10, CPT, HCPCS, NDC, and HIPAA-related data requirements. Experienced in patient cohort analysis, treatment utilization, data quality, ETL workflows, and healthcare dashboard development, translating complex healthcare data into actionable insights for clinical, operational, and business stakeholders.

SKILLS

Healthcare Data & Analytics: Claims Data, EHR/EMR Data, Patient Data, Provider Data, Pharmacy Data, Patient Cohort Analysis, Patient Journey Analysis, Treatment Utilization, Healthcare Utilization Analysis, Patient Outcomes, Clinical Reporting

Healthcare Standards & Compliance: ICD-10-CM, CPT, HCPCS, NDC, HIPAA, Healthcare Data Privacy, Data Governance, Data Integrity, Data Quality, Data Validation

Data Analysis & Programming: SQL, Python (Pandas, NumPy), SAS (Base SAS, PROC SQL, Macros), R, Statistical Analysis, Exploratory Data Analysis, Data Reconciliation, Root Cause Analysis

Data Management & ETL: ETL/ELT, Data Integration, Data Pipelines, Snowflake, Databricks, SQL Server, Oracle, SSIS, Alteryx, Data Transformation, Data Cleansing, Data Modeling, Source-to-Target Mapping, Data Lineage

Visualization & Reporting: Power BI, DAX, Power Query, Tableau, Advanced Excel, Power Pivot, PivotTables, Healthcare KPI Reporting, Operational Dashboards, Data Visualization

Tools & Platforms: AWS, Snowflake, Databricks, Oracle, SQL Server, SSMS, Git, Jira, Confluence

EXPERIENCE

Healthcare Data Analyst, CVS Health

Atlanta, GA | May 2025 – Present

- Integrated and analyzed 30M+ claims and EHR records to create longitudinal healthcare datasets supporting patient cohort analysis, treatment utilization, patient journeys, and outcomes research.
- Utilized ICD-10, CPT, HCPCS, and NDC coding data to identify patient populations, classify diagnoses and procedures, and support treatment utilization and healthcare reporting analyses.
- Developed reusable SQL data models across Snowflake and Oracle, combining patient, provider, claims, pharmacy, and product data for recurring healthcare analytics and reporting.
- Created Power BI dashboards and KPI reports to monitor patient populations, treatment utilization, clinical metrics, and operational performance for 100+ healthcare and business stakeholders.
- Streamlined recurring data preparation and analytical workflows using SQL, Python, SAS, and Databricks, reducing manual processing effort by 25+ hours per month.
- Established data quality controls through validation rules, reconciliation checks, data profiling, and exception monitoring, reducing recurring data issues by 28%.
- Collaborated with clinical, medical affairs, and business teams to translate healthcare data requirements into analytical datasets, reports, and actionable insights.

Healthcare Data Analyst, Cardinal Health

India | Jan 2021 – Aug 2023

- Consolidated and standardized 12M+ patient, pharmacy, laboratory, and medication records from multiple source systems to support healthcare reporting, clinical operations, and patient-level analysis.
- Engineered SQL queries, CTEs, stored procedures, and transformation logic across Oracle and SQL Server to prepare reliable datasets and automate recurring healthcare reporting.
- Built Power BI dashboards using DAX and Power Query to track medication utilization, patient populations, data completeness, and healthcare KPIs for clinical and operational stakeholders.
- Automated data preparation, anomaly detection, and exception reporting using Python, Pandas, NumPy, and SAS, reducing manual reconciliation effort by 32%.
- Investigated missing values, duplicate records, patient identifier mismatches, and inconsistent healthcare information, performing root-cause analysis and reconciliation to improve data accuracy.
- Produced source-to-target mappings, data dictionaries, lineage documentation, and validation rules to support data governance, traceability, and controlled healthcare data workflows.
- Supported production healthcare data pipelines and reporting processes by troubleshooting data load failures, resolving reporting discrepancies, and maintaining reliable analytical datasets.

EDUCATION

Master of Science in Business Analytics - Avila University | Kansas City, MO

PROJECTS

Healthcare Utilization and Patient Cohort Analysis

- Analyzed de-identified healthcare claims and patient data using SQL and Python to evaluate patient cohorts, treatment utilization, diagnosis patterns, and healthcare service trends using ICD-10 and CPT data.
- Performed data validation and exploratory analysis and developed a Power BI dashboard to present utilization trends, patient demographics, and key healthcare metrics for population health insights.
