

SUMMARY

Data Engineer with 5 years of experience designing, building, and optimizing large-scale ETL/ELT data pipelines in distributed environments. Deep expertise in Databricks, Apache Spark, Python, and SQL optimization across AWS and Azure cloud platforms. Proven ability to develop scalable data workflows, transform raw data into enterprise-grade datasets, and enable analytics-ready architectures. Strong background in pipeline orchestration, data modeling, performance optimization, and cross-functional collaboration to deliver robust data infrastructure supporting enterprise analytics and decision-making across government and commercial environments.

EDUCATION

University of North Texas <i>Master of Science in Advanced Data Analytics</i> Chaitanya Bharathi Institute of Technology <i>Bachelor of Engineering in Electrical and Electronics</i>	TX, USA <i>Jan 2023 – May 2024</i> Hyderabad, India <i>Aug 2016 – Oct 2020</i>
--	---

TECHNICAL SKILLS

- Languages: SQL (T-SQL, MySQL, PostgreSQL), Python, PySpark, R
- Databases: SQL Server, MySQL, PostgreSQL, Oracle, MongoDB
- BI & Reporting: Power BI, Tableau, SSRS, Excel (Power Query, Power Pivot, VBA), Visual Studio
- Data Engineering: Databricks, Apache Spark, PySpark, Airflow, ETL/ELT Development, Pipeline Orchestration, Data Modeling
- Cloud: AWS (S3, EC2, Lambda, RDS, CloudWatch, IAM), Azure Synapse Analytics, Google BigQuery
- SQL: Stored Procedures, Views, CTEs, TVFs, Indexing, Query Optimization, Performance Tuning
- Python: Pandas, NumPy, Matplotlib, Seaborn, SciPy, Scikit-Learn
- Analytics: Data Cleaning, Wrangling, Validation, Reconciliation, EDA, KPI Reporting, A/B Testing, Root Cause Analysis

PROFESSIONAL EXPERIENCE

B2Gnow Data Analyst II (Data Engineering Focus)/Remote 2024 – July 2026	USA July
--	---------------------------

- Architected and optimized 35+ enterprise data pipelines using SQL Server, T-SQL, and SSRS, implementing complex ETL logic, data transformation rules, and advanced SQL optimization strategies supporting government and enterprise clients.
- Engineered and optimized 80+ data pipeline components including Stored Procedures, Views, CTEs, Temporary Tables, and Table-Valued Functions (TVFs) to enhance data extraction, transformation, and loading efficiency across relational datastores.
- Developed and optimized 100+ complex SQL queries for large-scale data extraction, transformation, and aggregation, improving pipeline accuracy and execution efficiency while ensuring data integrity across enterprise datasets.
- Supported reporting solutions for 15+ public-sector clients by translating business requirements into scalable technical solutions and delivering production-ready reports.
- Designed dynamic parameter-driven reports with drill-down functionality, grouped summaries, conditional formatting, and Excel export capabilities to improve business reporting and decision-making.
- Performed data validation, reconciliation, and root cause analysis by comparing report outputs against source tables, transactional data, historical records, and business rules to ensure data integrity.
- Investigated and resolved 100+ production defects and client-reported issues through SQL analysis, dataset troubleshooting, and collaboration with Business Analysts, QA engineers, and Product Owners.
- Engineered data pipelines and transformation logic for contract management, vendor compliance, payments, and certification data across multiple government reporting initiatives, ensuring data accuracy and reliability.
- Collaborated within an Agile/Scrum environment using Jira to manage sprint deliverables, defect resolution, peer reviews, testing activities, production deployments, and release validation.
- Partnered with cross-functional teams to analyze business requirements, clarify technical specifications, recommend reporting improvements, and deliver high-quality analytical solutions.
- Conducted User Acceptance Testing (UAT), regression testing, production validation, and post-deployment support to ensure successful implementation of reporting enhancements.
- Developed **10+** interactive **Power BI dashboards** and analytical reports by integrating SQL Server datasets, enabling stakeholders to monitor KPIs, vendor participation, contract performance, and compliance metrics.
- Optimized data models and implemented DAX measures to support interactive dashboards and reporting, reducing manual data processing effort by 40% through automated ETL workflows.
- Engineered optimized data models using Power Query and Airflow scheduling, implementing automated refresh strategies that reduced latency and improved data freshness for business intelligence consumers.

Social Work (Remote)

Data Analyst

USA

Jan 2024 – June2024

- Boosted real-time reporting and business intelligence for clients by developing and maintaining **over 50 complex SQL queries**, ensuring data integrity and accuracy, which resulted in a 30% enhancement in decision-making capabilities.
- Improved data quality and reliability for multiple projects by utilizing Python for data cleaning and wrangling with **Pandas and NumPy**, processing over 10 million data points, **leading to a 25% increase in actionable business insights**.
- Facilitated data-driven decision-making for various clients by creating **over 20 interactive dashboards** and visualizations in **Power BI and MS Excel**, providing comprehensive insights to over 15 key stakeholders.
- Increased system efficiency and security for freelance projects by implementing robust data warehousing solutions on **AWS**, leveraging **CloudWatch, Lambda**, and **IAM** for monitoring, serverless computing, and secure access management, **resulting in a 40% reduction in system downtime**.
- Enhanced understanding of key metrics for clients by designing and developing over **30 detailed data visualizations with Matplotlib and Seaborn**, effectively communicating complex data trends to diverse audiences, leading to a 35% improvement in data interpretation.
- Ensured seamless project workflows and maintained codebase integrity by employing **Git and GitHub** for version control and collaborative development, managing over **200 code repositories** across multiple freelance projects.
- Improved project tracking and milestone achievement for freelance engagements by 20% by following the **Waterfall methodology** for project management, ensuring systematic planning, execution, and delivery.
- Processed and transformed large datasets using **PySpark and Databricks**, performing data cleansing and ETL workflows to improve data quality and reporting efficiency.

Accenture India Private Limited

Associate Software Engineer/ Data Analyst

India

Oct 2020 – Jan 2023

- Enhanced data accuracy by 20% by performing comprehensive data cleaning and wrangling using Python, R, Pandas, and NumPy. Addressed missing values, outlier detection, and data standardization, ensuring high-quality datasets for accurate analysis.
- Optimized data retrieval and management by developing and executing **complex SQL queries**. Improved data access and processing efficiency, **reducing query execution time by 25%** and ensuring timely data availability.
- Developed predictive models using **Scikit-Learn**, providing actionable insights and improving forecasting accuracy for strategic business initiatives. Utilized various machine learning algorithms to uncover hidden patterns in the data.
- Created detailed visualizations and interactive dashboards in **Power BI**. Effectively communicated complex data trends and key metrics to stakeholders, increasing engagement and understanding **by 30%**.
- Streamlined reporting processes by utilizing advanced features in **Microsoft Excel**, including **PivotTables, VLOOKUP**, and complex formulas. **Improved report generation speed by 35%** and ensured data accuracy in ad hoc analysis.
- Implemented scalable data storage and processing solutions on **AWS (EC2, S3, RDS)**. Enhanced data accessibility, ensured secure data management, and improved overall system performance by leveraging cloud resources.
- Managed and optimized MongoDB databases, ensuring efficient storage and retrieval of semi-structured and unstructured data. Improved data integrity and accessibility by implementing indexing and query optimization techniques.
- Conducted advanced statistical analysis and visualization using **Matplotlib**, creating detailed reports that supported data-driven decision-making. Provided visual insights that enhanced business strategies and operational efficiency.
- Collaborated within Agile frameworks, actively participating in sprint planning, daily stand-ups, and retrospectives. Ensured timely project delivery, continuous improvement in data processes, and alignment with business objectives.

PROJECTS

ORD21 Enterprise Reporting & Analytics

- Consolidated 4 contractor-specific reports into a unified enterprise reporting solution using SQL Server and SSRS, reducing report maintenance effort by **40%**.
- Developed **15+** complex SQL queries and calculated fields to analyze contract goals, vendor participation, payment summaries, and target market performance across multiple departments.
- Implemented dynamic report parameters and reusable business logic, improving report execution efficiency by **30%** and eliminating duplicate report development.

NYCEDC Prime & Subcontract Award Analysis

- Designed and developed an enterprise reporting solution analyzing **100K+** contract, subcontract, amendment, and payment records using advanced SQL queries and SSRS.
- Performed data validation and reconciliation across **10+** relational tables, achieving **99%+** reporting accuracy for executive and compliance reporting.
- Optimized SQL joins, aggregations, and report datasets, reducing report execution time by 35% while improving overall reporting performance.

Certification Retention & Compliance Analytics

- Redesigned certification retention reports by cleansing and validating **50K+** certification records, improving historical reporting accuracy by **25%**.
- Automated multi-tab reporting with dynamic SQL logic, reducing manual reporting effort by **60%** for business users.
- Identified and resolved **100+** data quality issues through SQL-based reconciliation and business rule validation before production deployment.
- Developed **3** interactive Power BI dashboards to monitor certification retention trends, compliance metrics, and historical performance using **DAX, Power Query**, and SQL Server datasets, reducing manual reporting by **40%**.
