

Shweta Rajeev

DATA ANALYST

(917)-753-8626 | TX, USA | shweta.rajeev19@gmail.com | [Linked In](#)

SUMMARY

- Around 4 years of experience as a Data Analyst and Business Analysis specializing in healthcare and financial data analysis, leveraging SQL, Python, and cloud technologies to deliver insights and optimize operations.
- Proficient in data extraction, transformation, and visualization using SQL, Pandas, Tableau, and Power BI, creating interactive dashboards to drive business decisions and increase stakeholder engagement.
- Expertise in machine learning models like Random Forest and Gradient Boosting, achieving 88% prediction accuracy for high-risk patient identification and driving early intervention.
- Skilled in creating comprehensive documentation for ETL processes, including data mapping and transformation logic, to facilitate knowledge sharing and compliance.
- Used QlikView scripting for data transformation and manipulation, ensuring data integrity and accuracy in visualizations.
- Proficient in cloud-based data warehousing solutions like Snowflake, Amazon Redshift and Azure, optimizing query performance by 70% and enabling real-time analytics for critical healthcare and financial metrics.
- Proven ability to work cross-functionally, align 30+ KPIs with business objectives, and ensure 100% compliance with data governance and privacy regulations like HIPAA, GDPR, and CCPA.
- Strong experience in Agile environments, actively participating in daily standups, backlog grooming, sprint planning, and User Acceptance Testing (UAT), ensuring timely and quality delivery.
- Demonstrated ability to conduct GAP and Impact Analysis, identifying opportunities for process improvement that resulted in enhancements in operational efficiency.

EDUCATION

Master of Science in Business Analytics & Artificial Intelligence - University of Texas, Dallas, USA

Bachelor of Science in Computer science – Jain University Bangalore, India

TECHNICAL SKILLS

Languages:	Python, Scala, R
Packages:	NumPy, Pandas, Matplotlib, Seaborn, ggplot2, SciPy, Scikit-learn, TensorFlow
Visualization Tools:	Tableau, Power BI, Advanced Excel (Pivot Tables, VLOOKUP)
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook
Database Management:	MySQL, PostgreSQL, SQL, Oracle
Cloud Technologies:	AWS, Azure, Google Cloud Platform
Methodologies:	SDLC, Agile, Waterfall, Predictive Modeling
Version Control:	Git, GitHub, Bitbucket
Data Manipulation:	Data Analysis, Data Mining, Data Preprocessing, Data Mapping, Data Cleaning, Data Visualization, Data Modeling, Data Warehousing, Data Storytelling, Data Wrangling, Data Acquisition, Data Integration, Data Transformation
Other Skills:	SSIS, SSRS, Machine Learning Algorithms, ETL Tools, Statistics, ServiceNow, MapReduce, Snowflake, SAS, SPSS, Hadoop, Spark, Alteryx, Probability distributions, Mathematics, Confidence Intervals, ANOVA, Advance Analytics, OLAP & OLTP, MS Office Suite (Microsoft Word, PowerPoint, MS Visio), Hypothesis Testing, Regression Analysis, Linear Algebra, Google BigQuery, Big Data, Data Interpretation, Data Pipeline, Association rules, Clustering, Classification, A/B Testing, Forecasting & Modelling, JIRA, UAT, Gap Analysis, Swot, Analysis, Cost/Benefit Analysis, Impact Analysis, Risk Analysis, BRD, FRD, SRS, BPMN, User stories, Use Cases, Test Plan, User Guide, Confluence, Trello, MS Project, JAD, KPI
Operating Systems:	Windows, Linux, Mac OS

WORK EXPERIENCE

Data Analyst | Johnson & Johnson, NJ

Jan 2024 - Present

- Spearheaded a data-driven initiative to optimize the distribution of medical supplies across healthcare facilities, ensuring timely access to critical resources and improving overall operational efficiency within the supply chain.
- Utilized SQL to extract and integrate comprehensive datasets from diverse sources, including inventory management systems and sales records. Analyzed over 50,000 transaction entries to identify key trends and patterns that informed supply chain strategies.
- Outlined potential risks such as data quality issues, compliance challenges, and resistance to adopting data-driven insights. Made mitigation strategies for each identified risk.
- Employed Python for advanced data analysis, leveraging the Pandas library to manipulate and preprocess large datasets efficiently and implemented data cleaning techniques to ensure accuracy and reliability in the analysis process.
- Used AWS Lambda for serverless data processing tasks, automating data cleaning and preprocessing workflows, which resulted in a 30% reduction in processing time and allowed for efficient handling of large volumes of data without managing resources.
- Conducted sophisticated time-series analysis to forecast future demand for medical supplies, achieving a remarkable 90% accuracy rate which allowed for proactive adjustments in inventory levels, minimizing shortages and overstock situations.
- Designed and developed interactive dashboards in Tableau, providing stakeholders with real-time access to critical key performance indicators (KPIs), also these dashboards included metrics such as stock levels, delivery times, and supply chain efficiency, enhanced visibility across departments and improved decision-making speed by 25%.
- Implemented a clear roadmap outlining the steps needed to bridge the identified gaps, including timelines for technology implementation, training, and stakeholder engagement initiatives.
- Improved overall delivery times by 15%, resulting in enhanced responsiveness within supply chain which ensured that healthcare providers received critical medical supplies promptly, ultimately contributing to better patient care and operational performance.

Data Analyst | Deloitte, India

Jun 2019 - Dec 2022

- Worked on a data analytics project which aimed at optimizing financial forecasting for a major retail client, focusing on enhancing the accuracy of revenue predictions and improving strategic decision-making.
- Implemented scheduled data refresh in Power BI to ensure that reports reflected the most current data, enhancing the reliability of decision-making processes and reducing report update times by 40%.
- Utilized data modeling tools such as ER/Studio and Lucid chart to design logical and physical data models that represented the relationships between financial applications, borrower profiles, and risk factors.
- Evaluated various machine learning algorithms, including linear regression and decision trees, by comparing their performance metrics such as accuracy and precision using historical sales data, resulting in the identification of the best-fit model for sales forecasting, which improved prediction accuracy by 20% while maintaining operational efficiency.
- Conducted exploratory data analysis (EDA) using Python to identify trends and anomalies in the client's sales dataset, revealing insights such as seasonal patterns and customer behaviors, which informed strategic recommendations for optimizing inventory management and targeted marketing campaigns, ultimately improving overall business performance by 15%.
- Used Azure Blob Storage to securely store raw sales data and related datasets, ensuring scalable and durable storage solutions for large volumes of information, which facilitated efficient data management and retrieval while optimizing costs by 20%, allowing for seamless integration with analytics tools for further processing.
- Conducted a cost-benefit analysis to evaluate the financial implications of implementing the predictive model, demonstrating a potential ROI of 70% based on reduced financial defaults.
- Managed performance tuning of the data warehouse by optimizing SQL queries and implementing indexing strategies, enhancing data retrieval speed for stakeholders. Regularly monitored performance metrics to ensure timely access to critical business insights and accommodate growing data volumes.
- Generated detailed reports from Jira to analyze project performance, which improved task completion rates by 25%, tracked velocity across sprints, and measured adherence to deadlines, leading to a 15% increase in overall project efficiency.
- Developed A/B testing frameworks to evaluate the effectiveness of different marketing strategies on sales performance, ensuring a robust methodology for comparing outcomes and achieving a 15% improvement in conversion rates for the tested campaigns.
- Made a comprehensive UAT plan outlining the objectives, scope, and criteria for success, ensuring alignment with project goals and stakeholder expectations. Created detailed process flow diagrams in Microsoft Visio to visualize the financial applications.
- Created pivot tables to summarize large datasets, allowing for quick aggregation and analysis of sales metrics across different dimensions, such as time and product categories, which reduced analysis time by 30% and improved reporting efficiency.

Certification

Google Data analytics professional certificate | Coursera | 2024
