

Siddhida Yuvraj Hulwane

+1 (214) 899-6613 | hulwanesiddhi@gmail.com | www.linkedin.com/in/siddhi-hulwane

EDUCATION:

- University of Texas at Dallas, Dallas Aug 2024 - May 2026
Master of Science in Business analytics & AI
- Vishwakarma Institute of Technology, Savitribai Institute of Technology, Pune June 2020 - July 2024
Bachelor of Technology in Electronics & Telecommunications Engineering

WORK EXPERIENCE:

Data Analyst | EOS North America June 2025 - June 2026

- Designed and maintained end-to-end ETL pipelines in Python to ingest and transform multi-source SAP, customer, and demand data, applying regression and time-series models to raise forecasting accuracy to 90%.
- Ran exploratory queries and validation scripts across multiple Salesforce datasets in SQL, reconciling records across systems to strengthen data quality and the reliability of downstream models and tables.
- Partnered with business stakeholders to translate reporting requirements into interactive KPI dashboards in Power BI and Salesforce, improving visibility into performance trends and cutting reporting turnaround time by 25% through pipeline automation.
- Applied data mining and segmentation techniques to customer behavior data, informing high-impact segments that improved cost efficiency by 12%.
- Implemented AI-driven solutions to answer stakeholder queries on revenue, sales, and data insights, improving decision-making efficiency.

Software Engineer | PARC Robotic Systems Pvt Ltd Jan 2022 – July 2024

- Engineered automated data pipelines for structured and semi-structured datasets, architecting a unified inventory and ordering system with Python, MySQL, and MongoDB that reduced manual procurement effort by 50%.
- Optimized backend real-time processing workflows by integrating PyTorch, TensorFlow and NumPy, accelerating order handling speeds and driving measurable increases in operational efficiency.
- Implemented an intelligent dealer recommendation engine utilizing supplier scorecards to dynamically surface 15+ highly verified flooring vendors for procurement.
- Aligned technical system outputs with core business requirements, fostering cross-functional coordination and streamlining data-driven decision-making between the operations and procurement teams.

PROJECT:

AZ National Trucking - Big Data Risk Analysis Jan 2025 – May 2025

- Engineered automated data ingestion pipelines to extract real-time vehicle telematics and geolocation data via RESTful APIs, processing large-scale datasets using Hadoop.
- Executed statistical analysis using Matplotlib to characterize fleet performance and safety-risk patterns, managing the project through the full Agile SDLC (requirements, development, testing, and deployment).
- Developed interactive Tableau and Power BI dashboards to track key performance metrics, enabling stakeholders to continuously monitor safety and operational trends.

Superstore Inventory Management System Aug 2024 – Nov 2024

- Engineered a robust inventory backend utilizing Python, MySQL, and MongoDB, facilitating real-time stock updates and automated supplier performance tracking.
- Implemented an LLM-based chatbot to democratize data access, translating natural language into complex SQL queries so non-technical users could instantly retrieve inventory metrics.
- Executed customer segmentation and behavioral analysis to uncover procurement patterns and pinpoint supplier gaps, directly informing data-driven restocking strategies.
- Visualized stock depletion rates and supply chain bottlenecks through interactive dashboards, helping management proactively reduce stockouts and overstocking.

Skill Bridge - AI-Powered Career & Learning Platform Aug 2025 – Nov 2025

- Integrated the Google Gemini API via robust backend endpoints to dynamically generate personalized career roadmaps and educational content.
- Designed an AI-driven workflow to automate skill analysis and targeted course recommendations, significantly improving content delivery speed and scalability.
- Managed the platform's rollout, moving smoothly from initial requirements and architectural design through API testing and final production deployment.

SKILLS

- Programming & Analysis: Python (pandas, NumPy), SQL, R
- Data Engineering: ETL Pipeline Design, Data Ingestion & Transformation, Data Modeling, Data Validation & Reconciliation, EDA
- Big Data: Apache Spark, Hadoop (HDFS, Hive), Large-Scale Distributed Data Processing, Gemini - API, LLM
- Cloud & Databases: AWS (EC2, S3), Snowflake, Azure, MySQL, MongoDB (NoSQL)
- Modeling & Forecasting: Regression, Time-Series Forecasting, Classification, A/B Testing, Statistical Analysis, Predictive Analysis
- Visualization & BI: Power BI, Tableau, Matplotlib, Seaborn, Excel
