SUMMARY

Junior SQL Developer with a Master's degree in Electrical and Computer Engineering from SUNY Albany and a strong foundation in database design, data manipulation, and query optimization. Skilled in writing efficient SQL queries, working with relational databases like PostgreSQL and MySQL, and building automated data workflows using Python and Java. Eager to apply analytical problem-solving skills and technical expertise to manage database systems and support data-driven solutions.

EDUCATION

University at Albany, State University of New York
MS in Electrical and Computer Engineering

Aug 2024 - May 2026

Honors:
I was offered a Deans Merit Scholarship - International for the duration of my course.

SKILLS

Programming & Scripting	Python, Java, JavaScript, PHP
Databases & Architecture	PostgreSQL, MySQL, MongoDB
DevOps, Tools & Methodologies	Git, GitHub Workflows, Linux/Unix CLI, SDLC, Agile/Scrum, OOP, Multithreading, VS Code, DSA

PERSONAL PROJECT EXPERIENCE

PHP Address Book Application

A web-based contact management system built with PHP and MySQL, featuring full CRUD (Create, Read, Update, Delete) functionality. Users can input and manage contact details stored securely in a relational database, with built-in export utilities that allow contact lists to be instantly downloaded in both CSV and vCard formats.

[LinkedIn](#)

PHP Document OCR & Processing System

An automated document management backend built with PHP and MongoDB, designed to process and digitize PDF files. The application converts incoming PDFs into high-resolution images, extracts text using Tesseract OCR, and securely stores the structured text data in MongoDB. It features a retrieval interface that allows users to instantly fetch and view document details using a unique acknowledgement number.

PROFESSIONAL EXPERIENCE

Wipro Limited, Hyderabad, TG, India
Senior Analyst

Mar 2021 - July 2024

- **Vendor & Roadmap Management:** Served as the primary liaison for 3+ key technology vendors, managing service-level agreements (SLAs) and technical roadmaps to ensure 99.9% platform uptime and alignment with organizational objectives.
- **Process Optimization:** Analyzed complex system requirements to identify inefficiencies, implementing targeted optimizations that boosted workflow automation by 30% and reduced annual operational overhead by \$50,000+.
- **Agile Delivery & Documentation:** Maintained peak performance in fast-paced environments, successfully managing 4+ concurrent projects while delivering 100% of technical documentation on time and upholding rigorous QA standards.
- **Cross-Functional Collaboration:** Collaborated with 5+ multi-disciplinary teams to bridge technical gaps, accelerating project delivery timelines by 15% through actionable insights shared with both technical and non-technical stakeholders.
- **Technical Stakeholder Engagement:** Acted as the technical bridge between client-facing business units and engineering teams, translating complex architectural requirements into scalable development tasks managed via Agile/Scrum methodologies.
