## SUMMARY

Data Analyst with nearly five years of experience analyzing healthcare claims, retail sales, inventory, survey, and customer data. Skilled in SQL, Python, Power BI, Tableau, and Advanced Excel for data cleaning, analysis, dashboard development, reporting automation, and forecasting. Experienced in building KPI reports, validating large datasets, improving query performance, and presenting clear findings to business and nontechnical stakeholders. Holds a Master's degree in Computer Science and Information Technology.

## TECHNICAL SKILLS

### Data Analysis & Programming:

Python, Pandas, NumPy, Jupyter Notebook, Advanced Excel, Exploratory Data Analysis, Trend Analysis, Data Transformation, Reporting Automation

### Business Intelligence & Visualization:

Power BI, Tableau, Power Query, Power Pivot, DAX, Star Schema, Interactive Dashboards, KPI Scorecards, Drill-Through Reports, Key Influencers, Decomposition Trees, Self-Service Analytics

### SQL & Database Analysis:

SQL, Complex Queries, Joins, CTEs, Window Functions, Indexing, Query Optimization, Data Extraction

### Data Cleaning & Validation:

Data Cleaning, Data Profiling, Data Validation, Data Quality Monitoring, Missing-Value Analysis, Duplicate Detection, Coding Consistency Checks, Data Standardization, Report Validation, Dashboard Testing

### Statistical & Predictive Analytics:

scikit-learn, Regression Modeling, Sales Forecasting, Demand Analysis, Customer Segmentation, Consumer Preference Analysis, Driver Analysis, Feature Engineering, Model Evaluation

### Business & Domain Analytics:

Healthcare Claims Analytics, Prior Authorization Analysis, Retail Analytics, Inventory Analysis, Survey Research, Campaign Analysis, Pricing Analysis, KPI Documentation, Requirements Gathering, Stakeholder Reporting

## EXPERIENCE

### Data Analyst Intern | UnitedHealth Group, USA

Apr 2026 – Jun 2026

- Reviewed de-identified prior authorization and claims data using SQL and Advanced Excel to identify utilization patterns, supporting assessment of services within the company's announced 30% reduction.
- Prepared Power BI dashboards with Power Query and DAX to track approval volumes, turnaround times, and service categories, providing weekly visibility to healthcare operations analysts.
- Validated de-identified claims extracts using Python and Pandas to find missing values, duplicate records, and coding inconsistencies, improving data reliability before team review.
- Supported senior analysts by documenting KPI definitions and comparing monthly prior authorization trends, helping maintain consistent reporting and communicate findings to nontechnical stakeholders.

### Sr. Data Analyst | Dynata, India

Aug 2023 – Feb 2025

- Evaluated first-party survey responses and retail purchase datasets through SQL, Python, Pandas, and NumPy, identifying consumer preferences and category trends that strengthened research recommendations.
- Built Power BI consumer research scorecards with DAX measures across brand awareness, favorability, and purchase intent, giving teams consistent weekly campaign performance comparisons.
- Configured Key Influencers, decomposition trees, and drill-through views in Power BI to examine demographic differences, helping analysts uncover drivers behind customer preferences.
- Standardized data cleaning and validation rules for incomplete, duplicate, and inconsistent survey responses, improving dataset reliability and reducing biased findings before client reporting.
- Refined complex SQL queries with CTEs and window functions to transform consumer research data, shortening report generation by 25% and supporting more dependable delivery schedules.
- Forecasted weekly sales patterns using scikit-learn regression models and historical purchase data to support demand planning, pricing reviews, and product strategy decisions.
- Presented Power BI reports combining survey and sales insights to marketing and research stakeholders, guiding audience targeting, product positioning, and pricing recommendations.

### Data Analyst | GlobalLogic, India

Jun 2020 – Apr 2023

- Analyzed retail sales, inventory, and product data with SQL and Python, identifying demand patterns that supported inventory planning and reduced stock imbalances across regional categories.
- Implemented row-level security and scheduled refreshes in Power BI to provide controlled, current sales reporting for regional managers while reducing manual access requests.

- Developed interactive Power BI dashboards with DAX and Power Query to monitor sales, inventory turnover, and category KPIs, enabling weekly reviews and clearer decisions for business leaders.
- Optimized complex SQL queries through joins, CTEs, and indexing, cutting data retrieval time by 25% and improving analyst productivity across recurring reporting workflows.
- Conducted exploratory data analysis on customer purchase and campaign data with Pandas and Tableau to evaluate behavior patterns, supporting targeted segmentation and more relevant marketing decisions.
- Automated weekly Excel and Python reporting workflows to consolidate source files, validate business data, and save several hours of manual preparation per reporting cycle.
