Results-driven Computer Science MS Graduate with a focus on **Data Engineering and AI Systems**. Experienced in building scalable data pipelines, optimizing large-scale databases (Solr, MySQL), and developing end-to-end AI-driven applications. Proven track record of improving system efficiency by up to 60% through automation and modern cloud integration.

TECHNICAL SKILLS:

- **Languages:** Python (Pandas, NumPy, Scikit-Learn), SQL, Java, C, JavaScript (React.js).
- **Data & AI:** Apache Kafka, Apache Solr, Model Context Protocol (MCP), Deep Learning (VGG16), Tableau, Power BI.
- **Cloud & Tools:** Azure, Docker, Git, DBeaver, Postman, VS Code.
- **Databases:** MySQL, Solr, PostgreSQL.
- **Methodologies:** Agile/Scrum, JIRA, Technical Documentation.

PROFESSIONAL EXPERIENCE:

Cintell LLC | *AI Data Associate* | **Remote** | **April 2025 – Present**

- **Developed and implemented** an MCP-based (Model Context Protocol) system to connect LLMs with a remote Apache Solr database containing **159M+ records**.
- **Built custom Python scripts** to automate complex data lookups (Email, ID, Raw Queries), streamlining the data retrieval process.
- **Assisting in the migration** of local workflows to **Azure Cloud** and testing Natural Language Processing (NLP) features to support English-based data queries.

Ikart Solutions | *Junior Software Developer* | **Remote(India)** | **April 2024 – March 2025**

- **Developed SQL-based data models** to help automate payroll for various employment types, contributing to a **40% increase in processing speed**.
- **Supported the backend team** in optimizing analytics logic to ensure data consistency across internal payroll reports.
- **Enhanced the UI/UX** of the internal dashboard using React.js, which improved the navigation experience for the HR team.

Horizon Technologies | *Backend Developer (Intern)* | **India** | **April 2021 – March 2022**

- **Created a business audit tool** using MySQL to track data points for scooter usage, including battery health and service history.
- **Improved database query performance** by 20% through schema refinements and SQL query optimization.
- **Implemented secure user login modules** and registration pages using HTML, CSS, and basic backend validation.

TECHNICAL PROJECTS:

Reddit Data Archival System | Apache Kafka & Java

- **Built** a data ingestion pipeline to archive Reddit posts in real-time.
- **Implemented** a Producer-Consumer model using Kafka, improving data ingestion speed by 60% and ensuring system reliability.

Brain Tumor Classification | Deep Learning & Python

- **Designed** a Convolutional Neural Network (CNN) using VGG16, achieving over **90% accuracy** on MRI image datasets.
- **Automated** image normalization and augmentation, reducing data pre-processing time by 35%.
- **Developed** a simple React-based interface for users to upload images and view classification results.

EDUCATION:

- MS Computer Science | *Wright State University*, Dayton, OH | May 2025
- B.Tech Computer Science | *GVPCEW (JNTUK)*, India | April 2023
