PROFESSIONAL SUMMARY

Entry-Level Data Engineer with an M.S. in Computer Science and hands-on experience using SQL, Python, ETL/ELT, relational databases, cloud technologies, and data pipelines. Skilled in extracting, transforming, validating, and analyzing data from databases, APIs, and files; developing automated data-processing workflows; and troubleshooting data-quality issues. Strong foundation in data warehousing, data modeling, Git, and scalable data engineering practices.

TECHNICAL SKILLS

Programming: Python, SQL, Java, Bash

Data Engineering: ETL/ELT, Data Pipelines, Data Integration, Data Ingestion, Data Transformation, Data Validation, Data Quality

Databases: PostgreSQL, MySQL, SQL Server, Snowflake, Amazon Redshift

Cloud & Big Data: AWS, Azure, Databricks, Apache Spark, PySpark, S3

Data Architecture: Data Warehousing, Data Lakes, Relational Databases, Data Modeling, Star Schema

Integration: REST APIs, JSON, CSV, Database/File Ingestion

Tools: Git, GitHub, Docker, Linux, Jupyter Notebook, Power BI

Practices: Pipeline Monitoring, Troubleshooting, Data Reconciliation, Testing, Documentation, Agile

EXPERIENCE

Data Engineer — John Deere

Feb 2026 – Present

- Develop and maintain ETL/ELT pipelines using Python and SQL to ingest, transform, validate, and deliver datasets for analytics and reporting.
- Extract and integrate data from relational databases, APIs, and file-based sources into standardized downstream datasets.
- Write and optimize SQL queries for data extraction, transformation, aggregation, reconciliation, and quality analysis.
- Build Python scripts to automate recurring data-processing, validation, and engineering workflows, reducing manual processing effort.
- Perform data-quality checks to identify null values, duplicates, schema inconsistencies, transformation errors, and anomalous records.
- Monitor pipeline executions, investigate failures, troubleshoot data issues, and document resolutions to improve reliability.

Software Engineer Analyst — Accenture

Sep 2020 – Jul 2023

- Developed Python and SQL solutions supporting enterprise data processing, automation, application integration, and operational workflows.
- Created SQL queries to extract, join, transform, and analyze data stored across relational database systems.
- Integrated applications and data workflows using REST APIs and structured formats such as JSON.
- Investigated production issues through debugging, log analysis, SQL validation, and root-cause analysis.
- Collaborated with developers, analysts, and stakeholders in Agile teams using Git, testing, code reviews, and technical documentation.

PROJECTS

Cloud ETL Data Pipeline

- Built an ETL pipeline using Python, SQL, and AWS to ingest data from APIs and files, perform transformations, and load analytics-ready datasets.
- Implemented validation and reconciliation checks for missing values, duplicates, schema inconsistencies, and transformation accuracy.
- Organized processed datasets using data warehouse concepts and documented pipeline architecture, transformations, and dependencies.

Automated Data Processing & Quality Framework

- Developed Python and SQL workflows to clean, standardize, transform, and validate structured datasets from multiple sources.
- Automated recurring quality checks and generated exception outputs to simplify investigation of failed validation rules.
- Used Git for version control and maintained reusable scripts and technical documentation for pipeline workflows.

EDUCATION

Master of Science in Computer Science

Dec 2025

Concordia University Wisconsin

GPA: 3.7/4.0

Bachelor of Technology in Information Technology

2020

Shadan College of Engineering and Technology
