Professional Summary

Graduate CS student with cloud and full-stack experience gained at publicly traded technology firms, known for solving complex problems and delivering patented innovations. Proven ability to build scalable systems and collaborate effectively to drive impact.

Education & Certifications

The University of Texas at Dallas , Richardson, TX	Expected May 2026
Master of Science, Computer Science (focus on Machine Learning/Artificial Intelligence)	GPA - 4.0/4.0
Recipient of Jonsson School Graduate Scholarship, Teaching Assistant for C++ Programming class.	
Vishwakarma Institute of Information Technology , Pune, India	July 2023
Bachelor of Technology, Computer Engineering	GPA - 3.94/4
Certifications: AWS Certified Cloud Practitioner (Link)	January 2026

Work Experience

Strategy INC (Nasdaq: MSTR) , Virginia, USA	May 2025 - August 2025
<i>Software Engineering Intern</i>	

- Developed 8 orchestration APIs using AWS Lambda and AWS API Gateway to provision RDS Postgres databases, MSK Kafka topics and Dockerized Python/Java services on ECS, enabling migration of 2000 tenants to a multi-tenant AWS environment.
- Reduced AWS RDS costs by 70% using shared resources and database sharding along with writer-instance autoscaling.
- Implemented Mutual-TLS authentication for MSK Kafka using AWS PCA issued tenant certificates and a Certificate Authority.
- Leveraged LLMs (ChatGPT, Gemini) to rapidly learn new frameworks and accelerate development and debugging speed.

The Citco Group Limited , Pune, India	April 2024 - July 2024
--	------------------------

Full Stack Junior Developer

- Migrated multiple JavaScript web pages to React, integrated them with Java Spring Boot REST APIs, and optimized Oracle SQL queries by normalizing large tables into smaller relational parts, improving average API response time by 20%.

Integral Ad Science (Nasdaq: IAS) , Pune, India	June 2023 - December 2023
--	---------------------------

Associate Software Engineer

- Developed features for Java and Python Microservices in AWS to improve API performance and reduce response times by 2ms.
- Designed and built an ETL streaming pipeline using PySpark and Kafka in Databricks to process 5B+ records/month, cutting duplicates to 0.5% with Watermarking and Time Travel; integrated outputs into Snowflake for analytics and Looker dashboards.
- Worked under and learned from the Tech Lead while jointly migrating regression tests for a major Java application to a parallel Dockerized environment integrated with Jenkins CI/CD running on EC2, achieving a 10 times reduction in execution time.

Integral Ad Science (Nasdaq: IAS) , Pune, India	July 2022 - May 2023
--	----------------------

Software Engineering Intern

- Solved a major industry gap in measuring In-game Ad viewability for flat banner ads and complex 3D/curved surfaces in 3D games by building an SDK for Unity3D and Unreal (C#, C++), enabling accurate fraud detection and resulting in 4 filed patents.
- Engineered a web crawling algorithm in Python to crawl 3.6 million apps improving the runtime by 50%.
- Led a global tech session on Spark streaming in Databricks, pioneering the implementation of the new tech stack.

Technical Skills

Programming Languages: Java, Python, C++, JavaScript

Tools: AWS(AWS Certified), Jira, Confluence, Docker, Kubernetes, Git

Full-Stack: React.JS, NodeJS, HTML, CSS, SpringBoot, Web Crawling

Data Engineering: Apache Spark/PySpark, Kafka, SQL, ETL, Databricks Platform, Snowflake

Projects

AI Resume Evaluation and Optimization ([Github](#)):

- Built a resume matching pipeline using TF-IDF, Word2Vec embeddings, and 1,200+ scraped job descriptions to extract key skills, identify best fit roles, and serve results through a React-based web interface.
- Implemented a RAG model using open-source Llama to generate resume improvements, highlight missing skills, and produce role-aligned suggestions, and output a job-match score.
- Scraped 1,200+ job descriptions using Selenium WebDriver, BeautifulSoup, and Python scripts to calculate TF-IDF weights.

PlanetStat - Website to Display World Stats: ([Github](#)) ([Website](#)):

- Built with React, HTML/CSS, and Python, the website displays economic statistics across 800+ pages, hosted on AWS Amplify.
- Provides real-time GDP, debt, population, and economic data for all 197 countries worldwide through interactive graphics.
- Achieved top Google search rankings, driving 2500 daily impressions and engaging 25 active users daily.

Patents & Certifications

Obtained **4 patents** while working at Integral Ad Science, including:

- Methods Determining Viewability of Three Dimensional Digital Advertisements. (US-20240185287-A1) [Link](#)
- Methods for Determining Curved Advertisement Viewability in Virtual Environments. (US-20240185307-A1) [Link](#)
