

Tarun Puthineedi

Cloud DevOps Engineer

Ph: (862)-372-5203

Email: psaitarun28@gmail.com

About Me:

A **DevOps Engineer** with **5+ years of experience** who is extremely proficient and has a track record of developing, putting into practice, and optimizing **DevOps** techniques for challenging software development projects. Committed to improving scalability, optimizing procedures, and assuring continuous integration and delivery to optimize organizational effectiveness and productivity. Expertise in using cloud computing platforms including **Azure, and Amazon Web Services (AWS)**.

Automation, configuration, and deployment of instances on cloud platforms and in data centers; involvement in **DevOps, CI/CD pipeline, build and release management; AWS, Azure Implementation & DevOps practice; build, release, and deployment of code through CI&CD pipelines; and in-depth understanding of key DevOps concepts like Kubernetes, automation, scripting, containerization, and infrastructure as code.** Good **Scripting skills on Shell and Bash.**

PROFESSIONAL SUMMARY

- ⬆ With over **5+ years** of experience as a DevOps Engineer, I've led **end-to-end DevOps projects**, achieving successful results. My background includes implementing DevOps methodologies and working with Cloud services such as AWS, as well as **Configuration management, Infrastructure automation, and Continuous Integration and Delivery (CI/CD)**.
- ⬆ I have experience with AWS Cloud Services, encompassing **EC2, EBS, VPC, RDS, SES, ELB, Auto scaling, CloudFront, Cloud Formation, Elastic Cache, API Gateway, Route 53, and Cloud Watch**. My skills extend to building CI/CD in the AWS environment using AWS Code Commit, Code Build, Code Deploy, and Code Pipeline, as well as using AWS CloudFormation, **API Gateway, and AWS Lambda** for **automation and security**.
- ⬆ I have transitioned existing AWS infrastructure to a Serverless architecture, which involved the creation of a Serverless Architecture using **AWS Lambda, API gateway, Route 53, and S3 buckets**.
- ⬆ Proficiency in deploying applications within **Kubernetes** using **GitOps Tools, notably Argo CD**.
- ⬆ Experienced in **project creation** within **Argo CD** and deploying **Argo CD** into **Kubernetes clusters** from **scratch**.
- ⬆ Adept at deploying applications directly into **Kubernetes clusters** from **GitHub** using the **Argo CD tool**.
- ⬆ My expertise in automating infrastructure provisioning encompasses Terraform and AWS CloudFormation, leading to improved agility, reliability, and scalability in infrastructure deployment.
- ⬆ I've set up **infrastructure** using **Terraform** and have written **YAML scripts**, as well as used **terraform** modules to create dependencies between microservices in AWS.
- ⬆ My experience also includes the conversion of **Terraform modules** with version conflicts to utilize CloudFormation templates during deployments, along with regularly updating **Terraform scripts** based on project requirements.
- ⬆ Configuration management tools like **Chef, Ansible, and Puppet** is part of my skill set. I've created **playbooks** for automating software installations.
- ⬆ In terms of **Ansible**, I'm experienced in **Ansible Tower**, which provides a dashboard and role-based access control. I've developed **Ansible playbooks** for managing application/OS configuration files, integrated them with **Jenkins**, and verified using **Jenkins plugins**, deploying applications in a Linux environment.
- ⬆ I've set up **Ansible**, managed hosts files, used YAML linters, authored various **playbooks**, and created custom modules for automating AWS services.
- ⬆ I've utilized **CI/CD pipelines** for automated building, testing, code quality analysis, artifact management, and deployment using **Jenkins** and **GitLab**. These pipelines have been integrated with **Ansible**.
- ⬆ Following the code build, functional and unit tests are executed to ensure quality and functionality. **Code quality, bugs, vulnerabilities**, and coding standards are checked using **SonarQube**.

- ⤴ **Artifacts** such as compiled binaries and deployable packages are stored in an artifact repository like **Artifactory**.
- ⤴ Applications are deployed to managed services, such as **AWS Beanstalk** for AWS cloud, using Infrastructure as Code tools like AWS CloudFormation.
- ⤴ Deployment takes place in multiple stages, including **DEV** for continuous **deployments**, **TEST**, **UAT** (per sprint), **STAGING/Pre-Prod**, and **PRODUCTION** with approval.
- ⤴ I've set up continuous integration and continuous deployment (**CI/CD**) pipelines for **Kafka** configurations and applications.
- ⤴ I have experience integrating **Docker files** into CI/CD pipelines for automating the building and deployment of **Docker images** and creating efficient and secure Docker files for containerized applications.

TECHNICAL SKILLS

Cloud Environments	Amazon Web Services (AWS)
AWS	AWS EC2, ELB, S3, EBS, VPC, Route 53, RDS, Auto-Scaling, IAM, SNS, SES, SQS, Cloud Front, Cloud Formation, Cloud Watch, Elastic Beanstalk
Programming/Scripting Languages:	Python, Groovy, YAML, Bash, Shell
Technologies & frameworks	CI/CD, Docker, AWS, EC2, S3, Lambda, Groovy, Jenkins, Kubernetes.
Web Servers:	Apache Tomcat, Nginx
Version Control Tools	SVN, GIT, GitHub, GitLab, Bitbucket
Tracking Tools	JIRA, Bugzilla
Build/Release (CI/CD)	Chef, Puppet, Ansible, Jenkins, Kubernetes, Maven, ANT, Git, SVN, Atlassian Jira, Selenium, Docker.
Automation Tool	Ansible, Terraform, ARM templates
Deployment Tools	Azure DevOps Server, Octopus
Monitoring Tools	Nagios, Splunk, ELK, CloudWatch, Azure Monitor, Prometheus, New Relic, Grafana.
Container Tools	Docker, Docker Swarm, Kubernetes, Mesos, OpenShift, Aws ECS.
Web Servers	Tomcat, APACHE 2.x, 3.x, JBoss 4.x/5.x, Web Logic (8/9/10) & Web Sphere 4.0/5.0
Application Servers	Web logic, Web sphere, Apache Tomcat, Nginx, Oracle application server
Networking/Protocol	TCP/IP, NIS, NFS, DNS, DHCP, WAN, SMTP, LAN, FTP/TFTP
Scripting	Python, YAML, Ruby, PHP, Bash, PowerShell, JSON, Shell Scripting, C, C++, XML, PL/SQL, HTML, PERL, .Net, Gradle, Groovy

PROFESSIONAL EXPERIENCE:

Client: Delta Air Lines, TX, USA

May 2023 to Till Date

Role: AWS/DevOps Engineer

Responsibilities:

- ⤴ Configured **Amazon S3, Elastic Load Balancing, IAM**, and Security Groups in public and private subnets within the **VPC** AND Set up Amazon **EC2 instances, Virtual Private Clouds (VPCs)**, and **security groups**. I had the opportunity to work extensively with various AWS **IaaS** and **PaaS** services, such as **EC2, RDS, S3, Lambda**, and **Elastic Beanstalk**. I was responsible for tailoring these services to meet specific business needs, ensuring they were both highly available and secure.
- ⤴ Implemented automated deployment pipelines for **Collibra** and Informatica platforms, reducing manual intervention and deployment time.
- ⤴ Established CI/CD pipelines using tools like Jenkins and Git for **Collibra** and Informatica, enabling rapid and reliable software releases.
- ⤴ Managed configuration settings for **Collibra** and Informatica environments using tools like Ansible, ensuring system stability and consistency across multiple environments.
- ⤴ Orchestrated Docker containers for **Collibra** and Informatica applications, optimizing resource utilization and facilitating quick deployment and scaling.
- ⤴ My experience in automation extended to both **Windows** and **AWS** environments. I created and maintained scripts using **PowerShell** and **AWS CloudFormation** templates, which significantly streamlined provisioning and management tasks while following Infrastructure as Code (IaC) principles.
- ⤴ Implemented Infrastructure as Code practices using tools like **Terraform** or CloudFormation to automate the provisioning and configuration of infrastructure resources in **TKE clusters**.
- ⤴ Conducted resource analysis and optimization to ensure efficient resource utilization within **TKE clusters**, resulting in cost savings and improved performance.
- ⤴ the migration of data stores and databases from **PCF** to **TKE**, ensuring data consistency and minimal downtime for critical data-intensive applications.
- ⤴ Utilized **Git, CVS, Subversion, GitLab, and Bitbucket for version control**, maintaining the integrity of application source code during the migration process.
- ⤴ Implemented **Maven, Ant, Gradle, and MS Build** for build **automation**, optimizing the build and deployment processes for migrated applications.
- ⤴ Orchestrated CI pipelines using **Jenkins, TeamCity, and GitLab**, automating the testing and deployment of applications on **TKE clusters**.
- ⤴ Developed custom scripts using Shell, Python, and Bash to automate various migration tasks, improving efficiency, and reducing manual effort.
- ⤴ Leveraged **AWS** services, including **EC2, CloudFormation, S3, ELB, RDS, and IAM**, to support hybrid cloud deployments and integrate on-premises resources with TKE clusters.
- ⤴ Handled **Docker, OpenShift, and Kubernetes** to containerize and manage applications, ensuring high availability, auto scaling, and efficient resource utilization.
- ⤴ I played a key role in implementing disaster recovery solutions using **AWS Elastic Disaster Recovery** and/or **Cloud Endure**.
- ⤴ These measures ensured that our critical applications and data were safeguarded in the event of outages or disasters.
- ⤴ My work demanded an in-depth understanding of networking and internet protocols, including **TCP/IP, DNS, SMTP, and HTTP**.
- ⤴ I applied this knowledge to design and manage distributed networks effectively.
- ⤴ My proficiency extended to designing and maintaining AWS Virtual Private Cloud (**VPC**) environments. I managed various aspects, including subnets, security groups, and routing tables, to ensure a secure and well-connected AWS infrastructure.

- ⬆ I was well-versed in **VPC** peering and Direct Connect configurations, which were crucial in setting up complex network architectures.
- ⬆ Communication and organization were essential in my role. I collaborated effectively with cross-functional teams, documented processes, and consistently met project goals in a dynamic work environment.
- ⬆ My strong interest in cloud engineering fueled my commitment to staying updated with the latest **AWS services** and best practices, recognizing their potential to revolutionize our business practices.
- ⬆ I demonstrated the ability to work both as part of a team and independently, adapting to project requirements and contributing to the **team's success** as needed.

Environment: Amazon Web Services (Aws), EC2, RDS, S3, Cloud Watch, EBS, NACL, VPC, DNS, Docker Containers, Docker swarm, Kubernetes(k8s), Chef, Terraform, Jenkins, Git, GitHub, MAVEN, ELK, Nagios, Shell, Python, JIRA, Linux, Nexus, SonarQube, JFrog, Webhooks.

Client: Anthem, Buffalo, New York

Aug 2022 to May 2023

Role: DevOps Engineer

Responsibilities:

- ⬆ Automating infrastructure management and configuration with Chef.
- ⬆ Setting up the environment from individual developer environments through to production. Writing custom modules as per the client's requirements.
- ⬆ Debug existing automation code and test to confirm functionality.
- ⬆ Create modules for deployment automation.
- ⬆ Create documentation for Chef best practices to be used by developers as a guide to Chef Automation.
- ⬆ Work directly with customers to ensure their deployments are secure, reliable and scalable.
- ⬆ Installation of patches and packages using RPM and YUM in Red hat Linux
- ⬆ Administered Linux servers for several functions including managing Apache/Tomcat Server, Mail Server, and MySQL databases in both development and production.
- ⬆ Expert in installing, configuring and maintaining Apache/Tomcat.
- ⬆ Creating Mounting and Troubleshooting NFS files with different OS platforms.
- ⬆ Linux kernel, memory upgrades and swaps area. Red Hat Linux kickstart installation.
- ⬆ Capacity Planning, Infrastructure design and ordering systems.
- ⬆ Attended team meetings, change control meetings to update installation progress, and for upcoming changes in the environment.
- ⬆ Updated data inventory management package for Software and Hardware products.
- ⬆ Worked with DBAs on the installation of RDBMS database, restoration and log generation.
- ⬆ Bash shell scripts to automate routine activities.
- ⬆ Monitored trouble ticket queue to attend user and system calls.
- ⬆ Collaborated using Atlassian tools including Jira, Confluence and GIT.
- ⬆ Provided 24*7 on call production support and resolved tickets.
- ⬆ Installed and configured MS SQL server and Oracle in Linux server.
- ⬆ Environment: AWS, Chef, Jenkins, Linux, Windows, Cognos BI and SQL server.

Environment: AWS, Chef, Jenkins, Linux, Windows, Cognos BI and SQL server.

Client: MetLife, Noida, India

March 2019 - July 2021

Role: DevOps Engineer

Responsibilities:

- ⤴ Automated the provisioning and configuration of infrastructure components such as **servers, networks, load balancers, and databases**. Implemented and managed scalable, highly available **infrastructure**.
- ⤴ Established and maintained **CI/CD pipelines** to automate application and **service build, test, and deployment processes**.
- ⤴ Integrated source control systems, leveraging **Git**, along with building automation tools like **Jenkins** and **GitLab CI/CD for continuous integration and delivery**.
- ⤴ Assisted in the setup and maintenance of **Collibra** data governance platform, ensuring data quality, data lineage, and compliance with data management policies.
- ⤴ Spearheaded a pivotal initiative, overseeing the **migration of PCF workloads to TKE**, successfully ensuring minimal disruption to ongoing operations.
- ⤴ Streamlined and optimized build processes by leveraging tools such as **Maven, Ant, Gradle, and MS Build**, enhancing the efficiency of application deployment.
- ⤴ Demonstrated expertise in version control systems, including **Git, CVS, Subversion, GitLab, and Bitbucket**, ensuring code integrity during the **migration process**.
- ⤴ Employed **Ansible, Chef, and Puppet** for configuration management, maintaining consistency between **PCF and TKE** environments and ensuring smooth **migrations**.
- ⤴ Implemented resource optimization techniques to ensure cost-effective resource utilization within **TKE clusters**, leading to significant cost savings and improved performance.
- ⤴ **Collaborated with development and operations teams** to conduct **root cause analysis (RCAs)** and enforce measures to **prevent recurrence**.
- ⤴ Focused on improving system reliability, resilience, and fault tolerance, implementing practices like fault injection, chaos engineering, and disaster recovery planning.
- ⤴ Collaborated closely with cross-functional teams, including developers, system administrators, and business stakeholders, to align goals and priorities.
- ⤴ Orchestrated the **creation of Pods with Kubernetes** and implemented **Jenkins pipelines** to manage the **builds of microservices**, facilitating their **deployment** to the **Docker registry** and **Kubernetes**.
- ⤴ Leveraged **Docker** to **virtualize servers**, creating isolated environments for **testing, development, and production**.
- ⤴ Integrated the **Kubernetes Container** orchestration framework with **Docker**, streamlining container management by **creating Pods, Configuration Maps, and Deployments**.
- ⤴ Documented and shared best practices, processes, and system configurations to enhance knowledge sharing and onboarding processes. Responsibilities:

Environment: AWS, Terraform, Jenkins, Ansible, Git, GitHub, MAVEN, ELK, Nagios, Shell, Python, JIRA, Linux, Nexus, SonarQube, GIT, Maven, Splunk, Nagios, Python Scripts, Kick start, Java/J2EE, Linux, ServiceNow,

Client: Johnson Controls, Hyderabad, India

Aug 2018 - Feb 2019

Role: DevOps Engineer

Responsibilities:

- ⤴ Deployed **AWS Solutions** using **EC2, S3, and EBS, Elastic Load balancer (ELB), auto-scaling groups** and **OpsWorks**.
- ⤴ Defined and **Implemented CI** and Release Management Processes, Policies, and Procedure.
- ⤴ Automated the **release pipeline** to achieve **zero touch deployments** using **Jenkins, SVN, Nexus, and Olio**.
- ⤴ Creation and management of branches, merging branches, deletion of obsolete branches after every release.
- ⤴ Writing the **post-commit** and **pre-push** hooks in **Python** for **code checks**.
- ⤴ Managed and maintained highly available **EC2 Instances** using **Terraform** and new modules to support new functionality in **Terraform**.

- ⤴ Written Templates for **infrastructure as a code** using **Terraform** to build staging and production environments.
- ⤴ Worked on **Terraform tool** to **AWS Cloud Formation** in order create update and version our **AWS infrastructure** and deployed **Docker** on **AWS**.
- ⤴ Worked with **Terraform** to **create AWS** components like **EC2, IAM, VPC, ELB, Security groups**.
- ⤴ Installed **Ansible Registry** for local upload and download of **Docker images** and even from **Docker hub**.
- ⤴ Maintained build **related scripts** developed in shell for **Maven builds**.
- ⤴ Created and modified build configuration files including **POM.xml**.
- ⤴ Utilized **Perl** and **Python** for **GIT** for creating repository hooks.
- ⤴ Used **Maven** dependency management system to **deploy snapshot** and release artifacts to **Nexus** to share artifacts across **projects** and **environments**.
- ⤴ Configured and maintained **Jenkins** to implement the **CI process** and integrated the **tool** with **ANT** and **Maven** to **schedule** the **builds**. Took the sole responsibility to maintain the **CI Hudson server**.
- ⤴ Used **Ansible** for configuration management and **deployed** all the services on to the **cloud using Ansible**.

Environment: SVN, Jenkins, Nexus, GIT, ANT, MAVEN, Perl, Puppet, Ansible, Python Scripts, Shell Scripts, Sonar, Red Hat Kick start server, Splunk.

EDUCATION

- ⤴ Master's in information Systems at New Jersey institute of Technology.
