Education

Kennesaw State University

Aug 2022 - May 2024

Bachelor of Science in Computer Science (GPA: 3.92 / 4.00)

Kennesaw, GA

- **Relevant Coursework:** Data Structures, Programming and Problem Solving II, Discrete Mathematics
- **Awards:** Dean's List Spring 2024, President's List Fall 2023, President's List Fall 2022

University of Georgia

Aug 2024 - Expected May 2026

Bachelor of Science in Computer Science (GPA: 3.72 / 4.00)

Athens, GA

- **Relevant Coursework:** Software Development, Computer Architecture and Organization, Computer Networks, Computing Ethics and Society, Software Engineering, Web Programming, Algorithm Analysis, Systems Programming, Operating Systems, Artificial Intelligence
- **Awards:** Dean's List Summer 2025, Dean's List Spring 2025, Presidential Scholar Fall 2024, Dean's List Fall 2025

Experience

Terma Inc

May 2025 - Present

Software Engineer Intern

Marietta, GA

- Streamlined CI/CD workflows by managing an internal Jenkins server, troubleshooting build failures, and optimizing Groovy pipelines for 2 different projects
- Implemented automated code linters, eliminating manual style checks and standardizing the codebase depending on a project's Software Development Plan (SDP)
- Developed Python scripts utilizing an internal LLM to generate hundreds of unit tests, increasing code coverage and decreasing the time it takes to write tests
- Researched and created Docker images to tailor environments to include a specific project's dependencies

Projects

Tasty Tracker | Java, JavaFX, Gson, RESTful APIs, Git

- Architected a multi-threaded desktop application to provide recipes for meals with a real-time nutritional analysis
- Integrated external REST APIs using Java's HTTP client, processing JSON payloads and converting data into user content
- Engineered a modular GUI in JavaFX following the MVC architecture
- Implemented Asynchronous Programming using Java Threads to separate API request handling from the UI, ensuring a highly responsive interface while data fetching
- The repository for this project is private and can be viewed upon request

Java API Integration Project: Simple Scythes | Java, Spigot API, Git, YAML

- Architected and published a custom game-logic extension for a Java server environment, managing the full development cycle from design to release
- Leveraged the Spigot API to catch and modify server-side packets and implement custom game logic through an event-driven architecture
- Developed complex state-handling logic to manage custom item data and interactions, ensuring persistent behavior across server restarts
- Engineered a custom configuration layer using YAML, enabling end-users to dynamically modify the extension's functionality without any code recompilation

Snake Game | Python, PyGame, Git

- Engineered a centralized game-loop to process frame-by-frame updates, utilizing a grid-mapping system to manage snake growth and collision events
- Optimized snake segment updates to $O(1)$ time complexity using a doubly linked list, ensuring 60 FPS gameplay

Technical Skills

Languages: Java, Python, JavaScript, Lua, C#, C++, C, Groovy

Technologies/Tools: Eclipse, IntelliJ IDEA, Visual Studio Code, Microsoft Visual Studio, PyCharm, SQL, Unix, Emacs, Git, Bitbucket, Jira, Confluence, Jenkins, Docker

Concepts: Event-Driven Programming, Object-Oriented Programming, API, Libraries, Parallelism, Databases, CI/CD
