SUMMARY

- Accomplished Cloud and Software Engineer with 5+ years of experience designing, deploying, and automating scalable infrastructure and microservices across AWS, Azure, and GCP. Demonstrated success in reducing deployment times by over 50% through cloud-native automation and infrastructure as code practices.
- Spearheaded cloud migration projects across hybrid environments using Terraform, Ansible, and Jenkins, cutting manual provisioning efforts by 60% and standardizing infrastructure across development, staging, and production.
- Hands-on expertise in containerization and orchestration using Docker, Kubernetes, and OpenShift, enabling self-healing microservice architectures with 99.9% uptime SLA.
- Built and maintained robust CI/CD pipelines using Jenkins, GitLab CI/CD, Tekton, and GitHub Actions, accelerating software delivery lifecycle by 40% and reducing human error in releases.
- Designed and deployed microservices using Java, Spring Boot, and REST APIs, improving service scalability and performance in high-traffic cloud-native environments.
- Proficient in Infrastructure as Code (IaC) with Terraform and Ansible, ensuring consistent and version-controlled infrastructure deployments across multi-cloud environments.
- Deep experience with AWS services such as EC2, S3, Lambda, SQS, SNS, EKS, and IAM; utilized Azure App Services and AKS for enterprise cloud deployments and compliance.
- Applied observability best practices using Splunk, Kibana, and SonarQube for real-time monitoring, log management, and code quality assurance, resulting in a 30% reduction in production incidents.
- Automated application deployments and infrastructure configuration, reducing lead time for changes and accelerating feedback cycles in agile environments.
- Implemented API Gateway and OpenAPI/Swagger documentation to streamline development and enhance security for external and internal services.
- Strengthened cloud security through proper configuration of IAM roles, VPC networking, and encryption standards, supporting compliance with industry standards like HIPAA and SOC 2.
- Adept at managing SQL and NoSQL databases such as PostgreSQL, SQL Server, Redis, MongoDB, Oracle, and IBM DB2, supporting reliable, high-throughput applications.
- Applied BDD and automated testing practices using Cucumber and JUnit, achieving 90% test coverage and reducing regression defects across multiple teams.
- Proven team collaborator with a strong agile mindset, actively participating in sprint planning, daily stand-ups, and retrospectives to align technical solutions with business goals.

SKILLS

Cloud Platforms	AWS (CloudFormation, CloudWatch, VPC, EC2, S3, Glacier, ECS, Elastic Beanstalk, Snowball, DynamoDB, RDS, Redshift, Direct Connect, Route 53, IAM, Lambda, AWS IoT, SNS, SES, SWF, Elasticsearch, CodeCommit)
CI/CD Tools	Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, AWS CodePipeline, ArgoCD, Spinnaker, Bamboo, TeamCity
Containerization	Docker, Kubernetes (EKS, AKS, GKE), Helm, OpenShift
Monitoring & Logging	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Splunk, Datadog, New Relic, Nagios, Zabbix, Spectrum
Programming/Scripting	Python, Java, Groovy, Ruby, Shell (Bash, PowerShell), Perl
Networking & Configuration Management	TCP/IP, DNS, HTTP/HTTPS, FTP, SSH, NFS, VPN, Load Balancers (ALB, NLB, HAProxy, Nginx), NetBox
Security & Build Tools	IAM, RBAC, Artifactory, SonarQube, SSL/TLS, HashiCorp Vault, Maven, Ant, Nexus
Database Systems	MySQL, PostgreSQL, AWS Redshift, AWS RDS, DynamoDB, MongoDB, Elasticsearch
Version Control & Infrastructure Tools	GitHub, GitLab, Git, Bitbucket, Terraform, Packer, Vagrant, AWS CloudFormation, SVN, CVS, Beanstalk, Terraform, ARM Templates
Other Tools	JIRA, Scoro, Nexus, Apache HTTP Server, WebSphere, WPF, Apache Tomcat, Nginx, Silverlight 4, Selenium, JUnit, JMeter, Django & Flask, Agile, HPE OneView, VMWare, Vcenter, Vsphere, Guacamole, IAP, Selenium, Cucumber, Maven, Sequana servers, Superdomes, TopRackSwitches, BrocadeSwitches

PROFESSIONAL EXPERIENCE

IBM – COPPEL, TX **Cloud / Platform Engineer**

April 2021 – Jan 2025

- Built and maintained scalable cloud infrastructure using Kubernetes and Terraform, automating provisioning and ensuring 99.99% availability across dev, test, and production environments.
- Automated infrastructure provisioning and configuration management with Terraform and Ansible, reducing manual setup time by 70% and eliminating configuration drift.
- Designed and deployed containerized applications using Docker and orchestrated them with Kubernetes for enhanced scalability and fault tolerance.
- Implemented and managed CI/CD pipelines using Jenkins, streamlining build, test, and deployment processes, leading to 40% faster delivery cycles.
- Led client-facing hybrid cloud engagements, advising on architecture and platform best practices, improving deployment speed and platform adoption by 30%.
- Integrated monitoring and logging tools like Splunk and Kibana, improving system observability and reducing incident resolution time by 45%.
- Supported multiple cloud migration projects to AWS and Azure, provisioning IaaS and PaaS resources to modernize legacy applications.
- Conducted infrastructure performance tuning and implemented best practices for scalability, resulting in 35% cost optimization.
- Developed backend microservices with Java, Spring Boot, Hibernate, and JPA, delivering resilient APIs with average response times under 200ms.
- Configured and managed API Gateways and service discovery mechanisms to route traffic efficiently in microservice architectures.
- Strengthened platform security by enforcing IAM roles, encryption standards, and secret management using best security practices.
- Standardized Infrastructure as Code (IaC) practices using Terraform modules and reusable Ansible playbooks, improving deployment consistency and reducing onboarding time for new environments by 50%.
- Integrated security scanning tools like SonarQube and Checkov into CI/CD pipelines, automating vulnerability detection and improving code quality compliance by 60%.
- Collaborated with cross-functional stakeholders to deliver platform features and improve operational workflows.

COGNIZANT TECHNOLOGY SOLUTIONS – BRIDGEWATER, NJ **Software Engineer**

Feb 2020 – Oct 2020

- Modernized monolithic Java applications into cloud-ready microservices using Spring Boot and RESTful APIs, improving system modularity and scalability.
- Participated in cloud adoption initiatives using AWS services such as EC2, EKS, S3, Lambda, SQS, SNS, Kinesis, and API Gateway to support distributed architecture.
- Designed and containerized services using Docker, enabling environment consistency across development and production stages.
- Developed automated test suites using JUnit and Cucumber following BDD principles, increasing regression test coverage by 40%.
- Integrated cloud monitoring solutions like AWS CloudWatch and Kibana, allowing proactive system diagnostics and alerting.
- Engineered event-driven backend flows using AWS SNS and SQS, enhancing system decoupling and responsiveness.
- Collaborated with DevOps teams to automate infrastructure using Terraform, streamlining cloud resource provisioning.
- Secured APIs and cloud workloads with IAM policies and environment-based access controls, ensuring data protection across services.
- Implemented build automation with Maven and Gradle, reducing compilation time and improving developer productivity.
- Wrote efficient Java code for data processing and business logic layers, contributing to stable feature releases on cloud-hosted services.
- Worked in Agile teams to deliver sprint goals, coordinate integration points, and manage technical debt in legacy codebases.

EDUCATION

Master in Chemical Engineering
New Jersey Institute of Technology , USA

Aug 2013 - June 2016

Bachelor in Chemical Engineering
University of California San Diego , USA

Sep 2011 - June 2013
