<https://github.com/thanishvavella07>

Summary

Cloud DevOps Engineer with around 7+ years of overall IT experience specializing in AWS and Azure cloud platforms, infrastructure automation, and DevOps practices. Experienced in designing, deploying, and managing scalable cloud infrastructure to support enterprise-level telecom and healthcare applications with high availability and performance. Skilled in Infrastructure as Code using Terraform and CloudFormation to automate provisioning and maintain consistency across environments. Strong hands-on experience in building and supporting CI/CD pipelines using Jenkins and Azure DevOps for faster and reliable software delivery. Proficient in containerization and orchestration using Docker and Kubernetes (EKS and AKS) for scalable and efficient deployments. Experienced in implementing cloud security practices using AWS IAM, Azure AD, RBAC, Secrets Manager, and Key Vault. Hands-on expertise in monitoring and logging using CloudWatch, Azure Monitor, Log Analytics, and Application Insights for proactive system health tracking. Adept at automating operational tasks using Shell scripting, PowerShell, and Python to reduce manual effort and improve efficiency. Experienced in managing deployments across Dev, QA, UAT, and Production environments with strong release management practices. Strong troubleshooting skills with proven experience in production support, incident management, and root cause analysis. Worked on cloud migration and modernization initiatives moving workloads from legacy environments to cloud-native architectures. Collaborative team player working closely with development, QA, and operations teams in Agile environments. Possess strong background in automation and manual testing ensuring software quality and reliability. Experienced across telecom, healthcare, banking, and logistics domains delivering stable and scalable solutions. Highly motivated professional focused on automation, continuous improvement, reliability, and operational excellence in cloud environments.

Skill Matrix

Cloud Platforms	AWS, Microsoft Azure
DevOps Tools	Jenkins, Azure DevOps, Git, GitHub, Bitbucket
Infrastructure as Code (IaC)	Terraform, AWS CloudFormation
Containerization & Orchestration	Docker, Kubernetes, EKS, AKS, Helm
CI/CD & Deployment	Continuous Integration, Continuous Deployment, Blue-Green Deployment, Rolling Deployment
Monitoring & Logging	AWS CloudWatch, Azure Monitor, Log Analytics, Application Insights
Security & Identity	AWS IAM, Azure Active Directory, RBAC, AWS Secrets Manager, Azure Key Vault
Scripting & Automation	Shell Scripting, PowerShell, Python
Cloud Networking	AWS Route 53, Azure DNS, Load Balancers, Virtual Networks, Subnets
Configuration & Release Management	Release Automation, Environment Management (Dev, QA, UAT, Production)
Backup & Disaster Recovery	AWS Backup, Azure Recovery Services Vault
Testing Tools	Selenium, TestNG, Manual Testing, Automation Testing
Database & Querying	SQL, Database Validation, Data Verification
Methodologies	Agile, Scrum, SDLC, STLC

Professional Experience

AT&T Atlanta, GA
Cloud DevOps Engineer

Nov 2024 to till date

Role & Responsibilities

- Worked on designing and managing cloud infrastructure in AWS and Azure, ensuring applications run smoothly with high availability and scalability to support telecom workloads.
- Used Terraform and CloudFormation to create infrastructure as code, which helped in automating resource creation and maintaining consistency across environments.
- Built and supported CI/CD pipelines using Jenkins and Azure DevOps, enabling developers to deploy applications faster and with fewer errors.
- Containerized applications using Docker and deployed them on Kubernetes clusters (EKS and AKS) to improve application performance and scalability.
- Implemented security controls using AWS IAM and Azure AD, ensuring only authorized users and services had access to cloud resources.
- Set up monitoring and logging using CloudWatch, Azure Monitor, and Log Analytics to track system health and quickly detect issues.
- Automated day-to-day operational tasks using Shell scripting, PowerShell, and Python, which reduced manual work and deployment time.
- Managed sensitive data and credentials securely using AWS Secrets Manager and Azure Key Vault following security best practices.
- Supported deployments across Dev, QA, UAT, and Production environments, ensuring proper testing and smooth releases.
- Worked closely with development and QA teams to troubleshoot deployment issues and improve release stability.
- Performed production support and incident management, analyzing root causes and implementing permanent fixes to avoid repeat issues.
- Assisted in migrating applications from on-premises or legacy systems to cloud-native architectures on AWS and Azure.
- Documented cloud setups, deployment steps, and operational procedures to support audits and team knowledge sharing.
- Configured and managed AWS Route 53 and Azure DNS, ensuring reliable domain resolution and traffic routing for telecom applications.
- Implemented Infrastructure cost optimization strategies using AWS Cost Explorer and Azure Cost Management to monitor usage patterns and reduce unnecessary cloud spend.
- Designed and maintained Kubernetes Helm charts for application deployments, enabling standardized and repeatable deployment processes across environments.
- Designed backup and disaster recovery strategies using AWS Backup and Azure Recovery Services Vault to ensure business continuity for critical telecom workloads.
- Implemented Blue-Green and Rolling Deployment strategies in Kubernetes and Azure DevOps to minimize downtime and ensure zero-impact production releases.

J&J, NJ

May 2023 to Oct 2024

Cloud DevOps Engineer

Role & Responsibilities

- Played a key role in building and supporting Azure cloud platforms used for healthcare applications, ensuring systems met high standards for availability, performance, and data protection.
- Designed and maintained automated release pipelines in Azure DevOps, allowing development teams to deploy applications safely and consistently with minimal manual intervention.
- Worked extensively on Azure Kubernetes Service (AKS), supporting application deployments, scaling strategies, and cluster maintenance to ensure uninterrupted service delivery.
- Implemented environment separation strategies so that development, testing, and production workloads remained isolated, reducing risk and improving deployment confidence.
- Managed identity and access controls using Azure Active Directory and RBAC, ensuring users and services had only the permissions required to perform their tasks.
- Configured detailed application monitoring and telemetry using Application Insights, helping teams identify performance issues and improve application response times.
- Supported secure handling of sensitive information such as secrets, certificates, and keys by integrating applications with Azure Key Vault.
- Collaborated closely with application and QA teams to onboard new workloads into Azure and guide them through cloud deployment best practices.

- Monitored system behavior during peak usage and helped resolve performance and capacity-related issues by adjusting Azure resources appropriately.
- Actively participated in production support activities, analyzing alerts, identifying root causes, and implementing fixes to prevent recurring incidents.
- Assisted security and compliance teams by providing visibility into Azure configurations and supporting audit and regulatory requirements common in healthcare environments.
- Improved deployment reliability by adding approval gates, validation steps, and rollback mechanisms within Azure release pipelines.
- Took part in regular Azure maintenance activities, including service updates and platform improvements, to keep environments secure and up to date.
- Created clear operational documentation and troubleshooting guides to support ongoing operations and enable faster issue resolution by support teams.

HSBC, Hyderabad
Automation Test Engineer

June 2021 to Dec 2022

Role & Responsibilities

- Worked on automating test cases for critical banking applications to ensure accuracy, reliability, and smooth functioning of customer-facing and internal systems.
- Designed and developed robust automation test scripts using tools like Selenium and TestNG, reducing manual testing effort and improving test coverage.
- Analyzed business and functional requirements to identify test scenarios, edge cases, and automation feasibility for complex banking workflows.
- Built reusable automation frameworks and utilities to support regression, smoke, and sanity testing across multiple application modules.
- Integrated automated test execution into CI/CD pipelines, enabling early detection of defects during build and deployment cycles.
- Performed end-to-end testing of web applications, validating user journeys such as login, transactions, reports, and data validations.
- Executed automated regression test suites regularly to ensure new code changes did not impact existing banking functionalities.
- Conducted database testing by validating backend data using SQL queries to ensure data integrity and consistency across systems.
- Logged, tracked, and managed defects using defect management tools, working closely with developers to ensure timely resolution.
- Supported manual testing activities when required, especially during UAT and release validation phases.
- Participated in sprint planning, daily stand-ups, and review meetings to align testing activities with Agile development practices.
- Ensured compliance with banking quality standards by following structured test processes and maintaining proper test documentation.
- Analyzed automation results and prepared detailed test reports highlighting test coverage, failures, and quality metrics.
- Assisted in performance and cross-browser testing to ensure applications worked consistently across different environments.
- Continuously improved automation scripts and frameworks to enhance execution speed, stability, and maintainability.

Mphasis, Hyderabad
Manual Test Engineer
Client: FedEx

Jan 2019 to May 2021

Role & Responsibilities

- Performed end-to-end manual testing of IVR (Interactive Voice Response) systems used for customer support, shipment tracking, and service inquiries.

- Analyzed IVR call flow documents and business requirements to understand menu structures, prompts, call routing, and backend integrations.
- Validated IVR call scenarios including inbound calls, menu navigation, voice prompts, keypad (DTMF) inputs, call transfers, and call termination flows.
- Tested IVR behavior for different customer journeys such as shipment tracking, delivery status, pickup scheduling, and customer support escalation.
- Verified integration between IVR systems and backend applications to ensure correct retrieval and playback of customer and shipment information.
- Conducted negative and boundary testing to validate IVR responses for invalid inputs, no input, call timeouts, and incorrect selections.
- Tested IVR functionality across different environments to ensure consistent behavior during peak and non-peak call volumes.
- Validated multi-language prompts, voice clarity, pronunciation, and accuracy of recorded messages as per business requirements.
- Logged IVR defects with detailed call steps, expected vs actual voice responses, and supporting call logs or recordings.
- Coordinated closely with developers, IVR support teams, and business stakeholders to clarify issues and verify fixes.
- Performed regression testing after IVR updates or configuration changes to ensure existing call flows were not impacted.
- Supported UAT testing by validating real-world call scenarios with business users before production releases.
- Verified failover and fallback scenarios to ensure calls were routed correctly during system or network issues.
- Ensured IVR flows met quality standards related to customer experience, response accuracy, and call handling efficiency.
- Prepared detailed test execution reports highlighting IVR coverage, defects, call flow issues, and release readiness.

Education

- M.S in Information systems - San Diego State university - January 2023 to May 2025
- B Tech in computer science & engineering - SRM University - August 2014 to May 2018

Certifications

- Q spiders - Manual testing, core java, database testing, agile methodology, web security testing - issues Nov 2019
- RPA Using Automation Anywhere - issued September 2020
