

UJWAL DAYASAGAR DAMA

Charlotte, NC | +1 7042583372 | Uddama2000@gmail.com | [Linkedin](#)

EDUCATION

University of North Carolina at Charlotte
Master's, Cybersecurity

Aug 2024 - May 2026
NC, USA

Vishwakarma Institute of Technology
Bachelor of Technology, Computer Engineering

Aug 2018 - Jun 2022
Pune, India

EXPERIENCE

TECHTOASTERS

Aug 2022 - Jan 2024

Associate Software Developer

Pune, India

- Built and maintained scalable Java and Python backend microservices, implementing RESTful APIs and optimizing SQL queries to reduce response time and increase system throughput.
- Worked across the full software development lifecycle - development, unit testing, CI/CD automation, and production debugging - collaborating with DevOps teams in an agile environment to streamline deployments.

PROJECTS

Web Application Security Assessment & Hardening - ITIS 5221 Penetration Testing

Aug 2025 - Dec 2025

- Performed an end-to-end vulnerability assessment of a Java Spring Boot application using OWASP ZAP as an intercepting proxy, exploiting and documenting 8 vulnerability classes across the OWASP Top 10, including SQL, XPath, and command injection; XSS across HTML, attribute, and JavaScript contexts; IDOR; SSRF; and path, log, and SMTP header manipulation.
- Traced each finding to root cause in controller and helper classes, remediating with parameterized JDBC and XPath queries, context-sensitive output encoding via the OWASP Encoder library, allow-list input validation, and ProcessBuilder with fixed arguments in place of Runtime.exec.
- Eliminated broken access control by binding authorization to server-side session identity rather than client-supplied parameters, and mitigated SSRF through host and path allow-listing of outbound requests.
- Verified every mitigation by replaying the original exploit chains and delivered an engagement-style report documenting investigation findings, annotated evidence, and before-and-after code for each fix.

AWS Academy Cloud Architecting - Cafe Cloud Application

Aug 2025 - Dec 2025

- Built an end-to-end AWS architecture for a café ordering application, evolving an S3-hosted static site into a three-tier EC2 and Amazon RDS system inside a securely segmented VPC, with public and private subnets, internet/NAT gateways, security groups, and network ACLs applying network security controls across the web, application, and database tiers.
- Added high availability and elasticity with an Application Load Balancer and Auto Scaling groups across multiple Availability Zones, automated repeatable deployments with infrastructure-as-code, and built a serverless Lambda/SNS reporting pipeline delivering daily sales insights.

Reverse Shell & USB-Based Insider Attack Analysis

Jan 2025 - May 2025

- Conducted an in-depth forensic investigation of a simulated insider data breach using FTK Imager, Autopsy, and Registry Explorer on Windows 11; acquired and analyzed system and USB images and verified integrity via MD5/SHA-1 hashes.
- Identified Netcat-based reverse shell activity triggered by a malicious batch script (CONFIDENTIAL.bat), and mapped cross-system USB usage, registry and file system artifacts, and browser history to reconstruct the attack timeline and detect Windows Defender tampering.
- Compiled a detailed investigative report correlating digital evidence to insider actions, demonstrating artifact analysis and forensic documentation.

FENS

Aug 2022 - Jan 2024

- A microservices-based application for security analysis and monitoring of client cloud accounts was created utilizing a CI/CD pipeline. Git, Jenkins, and shared libraries have been integrated to allow for automated deployments.
- Terraform managed infrastructure provisioning and Ansible setup, resulting in scalable and dependable environments. Non-production deployments were done with Minikube and Kubeadm, whereas production deployments were done on AWS.
- Implemented centralized monitoring with OpenSearch, Grafana, and Prometheus, as well as progressive delivery using ArgoCD and Argo Rollouts. FluentD and FluentBit have been integrated for log aggregation.

SKILLS

- **Security:** Penetration Testing, Web Application Security (OWASP Top 10), Vulnerability Assessment & Remediation, Digital Forensics, Secure Code Review, Network Security, Incident Response, Threat Detection, Security Monitoring
- **Security Concepts:** Identity & Access Management (IAM), Security Information & Event Management (SIEM), Endpoint Detection & Response (EDR), MITRE ATT&CK, Applied Cryptography, DNSSEC, LDAP/Kerberos, NetFlow Analysis, Cybersecurity, TCP/IP, DNS, HTTP/HTTPS, VPNs, Security Log Analysis
- **Security Tools:** Burp Suite, OWASP ZAP, Nmap, Wireshark, FTK Imager, Autopsy, Registry Explorer, Kali Linux, Elastic & Kibana, Splunk
- **Cloud & DevOps:** AWS (EC2, S3, IAM, VPC, RDS, Lambda), AWS Cloud Security, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, ArgoCD
- **Programming & OS:** Python, Java, SQL, Bash, JavaScript, Spring Boot, Linux, Windows
- **Hands-on Platforms:** TryHackMe, Hack The Box

CERTIFICATIONS

- CompTIA Security+
- Google Cybersecurity Professional Certificate
- AWS Academy Cloud Architecting
