

Venkateswarlu Bandaru

DevOps Engineer / Kubernetes

mobile: 9407583153

Email: Venkateswarlub977@gmail.com

PROFILE SUMMARY

- **DevOps / Cloud Engineer** with **4+ years of experience** designing, automating, and managing highly available, scalable, and secure cloud infrastructure across **AWS, Microsoft Azure, and Google Cloud Platform (GCP)**, supporting enterprise-grade production environments.
- Extensive expertise in **CI/CD pipeline** architecture and automation using **Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, AWS CodePipeline, and CircleCI** enabling faster and reliable software delivery in Agile and DevOps environments.
- Strong experience implementing **Infrastructure as Code (IaC)** using **Terraform, AWS CloudFormation, and ARM templates** to provision and manage cloud infrastructure with repeatable, automated deployments.
- Deep knowledge of containerization and orchestration technologies including **Docker, Kubernetes, Amazon EKS, and Helm**, enabling scalable microservices architecture and resilient cloud-native deployments.
- Skilled in cloud networking and security architecture, including **TCP/IP, DNS, HTTP/HTTPS, VPNs, VPCs, firewalls, load balancers, IAM policies, and Zero Trust security models** to ensure secure and compliant infrastructure.
- Hands-on expertise in **observability, monitoring, and logging solutions** including **Prometheus, Grafana, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Nagios, AWS CloudWatch, and Azure Monitor** to maintain system reliability and performance.
- Proficient in automation and scripting using **Python, Bash, PowerShell, Ruby, and Perl**, building automation frameworks to streamline infrastructure management, deployment workflows, and operational tasks.
- Experience implementing event-driven and serverless architectures using **AWS Lambda, Azure Functions, Kafka, RabbitMQ, AWS SNS/SQS, and API Gateway**, enabling scalable, cost-efficient application integrations.
- Strong background in database and data infrastructure management including **MySQL, PostgreSQL, Oracle, MongoDB, Cassandra, and DynamoDB**, focusing on performance optimization, high availability, and disaster recovery. · Administered Amazon EKS clusters including node group scaling, workload scheduling, cluster maintenance, and deployment troubleshooting.
- · Automated Kubernetes deployment workflows using Helm charts and GitHub Actions.
- Experienced supporting production **Kubernetes clusters** including workload management, cluster upgrades, monitoring, troubleshooting, and platform reliability across cloud and hybrid environments.
- Strong background in Infrastructure as **Code using Terraform** and **ARM templates** to automate **scalable Kubernetes** and cloud infrastructure deployments.
- Hands-on experience improving deployment reliability, reducing operational toil through automation, and supporting enterprise DevOps operations in Agile environments."
- Experience implementing secure DevOps practices aligned with compliance and organizational security standards.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud Platform (GCP)
- **DevOps & CI/CD:** Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, AWS CodePipeline, CircleCI, ArgoCD
- **Infrastructure as Code (IaC):** Terraform, AWS CloudFormation, Azure Resource Manager (ARM), Helm
- **Configuration Management:** Ansible, Puppet, Chef
- **Containerization & Orchestration:** Docker, Kubernetes, Amazon EKS, Azure Kubernetes Service (AKS), Google Kubernetes Engine (GKE)
- **Version Control:** Git, GitHub, GitLab, Bitbucket
- **Scripting & Programming:** Python, Bash, PowerShell, Shell Scripting, Ruby, Perl
- **Monitoring & Observability:** Prometheus, Grafana, Nagios, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Azure Monitor
- **Databases:** MySQL, PostgreSQL, Oracle, MongoDB, Cassandra, DynamoDB, Redis
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, VPN, VPC, Subnets, Firewalls, Load Balancers
- **API & Integration:** RESTful APIs, AWS API Gateway, Azure API Management

- **Security & Compliance:** AWS IAM, Azure AD, RBAC, KMS, HashiCorp Vault, Secrets Manager, DevSecOps
- **Serverless Computing:** AWS Lambda, Azure Functions, Event-Driven Architectures
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, AWS SNS, AWS SQS
- **Operating Systems:** Linux (Ubuntu, CentOS, Red Hat), Windows Server
- **Web & Application Servers:** Apache, Nginx, Tomcat
- **Virtualization:** VMware, Hyper-V, VirtualBox
- **Backup & Disaster Recovery:** AWS Backup, Azure Site Recovery, RDS Snapshots
- **Collaboration & Project Tools:** Jira, Confluence, Slack
- **AI-Enabled Development:** GitHub Copilot, AI-assisted coding, DevOps automation using AI tools
- **AI / ML & GenAI Infrastructure:** Machine Learning deployment, NLP pipelines, Large Language Models (LLMs), Generative AI infrastructure, model API integration
- **Methodologies:** Agile, Scrum, Kanban, DevOps, CI/CD Best Practices

EDUCATION DETAILS

- Master's in cyber security from Lindsey Wilson University, USA (Jun 2024 - Dec 2025)

PROFESSIONAL EXPERIENCE

Azure DevOps Engineer

PayPal, Austin, Texas, USA

Feb 2026 -Present

- Designed and implemented end-to-end **CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins** to automate build, test, and deployment processes for large-scale fintech applications, improving deployment reliability and release velocity.
- Managed **Kubernetes (AKS) cluster operations** including workload scaling, namespace management, ingress **configuration, RBAC**, and rolling upgrades for production environments.
- Supported troubleshooting and incident resolution for containerized applications, improving platform uptime and deployment stability.
- Implemented Helm-based deployments and Kubernetes resource optimization for scalable microservices workloads.
- Participated in production support and monitoring activities for Kubernetes-hosted applications.
- Provisioned and managed cloud infrastructure using **Terraform and Azure Resource Manager (ARM)** templates, enabling scalable, secure, and repeatable environments for high-volume payment processing systems.
- Deployed and managed containerized applications using **Docker and Kubernetes (AKS)**, ensuring high availability, scalability, and resilience for microservices-based payment and transaction platforms.
- Administered **Azure cloud services including Virtual Machines, Azure App Services, AKS, Azure Storage, and Azure Key Vault**, optimizing performance, cost, and availability of enterprise financial workloads.
- Implemented **API management and integrations using Azure API Management and RESTful APIs**, enabling secure communication between payment gateways, fraud detection systems, and internal services.
- Strengthened cloud security and compliance by configuring **Azure AD, RBAC, Network Security Groups, Azure Firewall, VPN, and TLS/HTTPS encryption**, ensuring secure financial data transactions and regulatory compliance.
- Automated infrastructure operations and deployment workflows using **Python, Bash, and PowerShell**, reducing manual interventions and improving operational efficiency across DevOps environments.
- Implemented monitoring and observability solutions using **Azure Monitor, Prometheus, Grafana, and Splunk**, enabling real-time performance monitoring, proactive alerting, and incident resolution.
- Optimized database and data pipeline performance across **Azure SQL, PostgreSQL, Cosmos DB, and distributed data systems**, ensuring reliable storage and fast processing of payment and transaction data.
- Leveraged **AI-assisted development tools such as GitHub Copilot and integrated AI/ML and GenAI services** to support **NLP workflows, LLM-powered automation, intelligent monitoring, and AI-driven insights** for DevOps operations and fintech analytics.

AWS DevOps Engineer

DoorDash, Austin, Texas, USA

Feb 2025 - Dec2025

- Designed and implemented **CI/CD pipelines** using **AWS CodePipeline, CodeBuild, CodeDeploy, and GitHub Actions**, automating build, test, and deployment workflows to support high-traffic food delivery platforms.
- Provisioned and managed cloud infrastructure using **Terraform and AWS CloudFormation**, enabling scalable, secure, and highly available environments for microservices-based applications.
- Administered **Amazon EKS clusters** including node group scaling, workload scheduling, **cluster maintenance**, and **deployment troubleshooting**.
- Automated **Kubernetes deployment** workflows using Helm charts and **GitHub Actions**.
- Deployed and orchestrated containerized applications using **Docker and Amazon EKS**, improving scalability and reliability for real-time order processing and delivery tracking services.
- Managed and optimized **AWS EC2, Auto Scaling Groups, Elastic Load Balancers (ELB/ALB), and Amazon CloudFront**, ensuring high availability, low latency, and seamless customer experience during peak traffic.
- Implemented serverless architecture using **AWS Lambda, API Gateway, and Step Functions**, supporting event-driven workflows for order notifications, payments, and real-time delivery updates.
- Strengthening **cloud security and networking** by configuring **VPC, IAM roles, Security Groups, AWS WAF, VPN, and AWS Direct Connect**, ensuring secure communication across distributed cloud environments.
- Implemented monitoring, logging, and observability using **AWS CloudWatch, Datadog, Splunk, and ELK Stack**, enabling proactive alerting, performance monitoring, and rapid incident resolution.
- Optimized data infrastructure using **Amazon RDS, DynamoDB, PostgreSQL, and Cassandra**, ensuring reliable, scalable, and high-performance data processing for large-scale transaction and analytics workloads.

DevOps Engineer

SunTrust Banks, Chennai, India

Jan 2022 - Nov 2023

- Built and maintained **CI/CD pipelines** using **Jenkins, GitLab CI/CD, CircleCI, and GitHub**, automating build, testing, and deployment processes for secure banking applications and accelerating release cycles.
- Provisioned and managed cloud infrastructure using **Terraform and AWS CloudFormation**, ensuring scalable, compliant, and highly available environments for financial services platforms.
- Deployed and managed containerized applications using **Docker and Kubernetes**, improving scalability, fault tolerance, and performance for microservices-based banking systems.
- Automated configuration management and infrastructure provisioning using **Ansible, Puppet, and Chef**, reducing manual configuration errors and ensuring consistency across environments.
- Implemented monitoring, logging, and observability solutions using **Grafana, Nagios, Datadog, and ELK Stack**, enabling proactive issue detection and improving reliability of transaction-processing systems.
- Strengthened security and networking by configuring **SSL/TLS encryption, firewalls, VPNs, API Gateways, and IAM controls**, ensuring secure financial data transmission and compliance with banking security standards.

Cloud Engineer

Tata Communications, Chennai, India

Jun 2020 - Dec 2021

- Architected and managed scalable cloud infrastructure on **AWS and Google Cloud Platform (GCP)**, ensuring high availability, performance optimization, and secure environments for enterprise applications.
- Automated infrastructure provisioning and configuration using **Terraform and AWS CloudFormation**, enabling consistent, repeatable deployments and efficient environment management.
- Built and maintained **CI/CD pipelines using Jenkins, GitLab CI/CD, and AWS CodePipeline**, accelerating build, testing, and deployment cycles while improving release reliability.
- Deployed and orchestrated containerized applications using **Docker and Kubernetes**, supporting microservices architectures and enabling scalable, resilient application deployments.
- Implemented **secure cloud networking, API integrations, and serverless services (AWS Lambda, API Gateway)** while managing databases such as **MySQL, MongoDB, and Cassandra**, ensuring secure, high-performance data processing and system reliability.
