Education

University at Albany - SUNY

Masters of Science in Data Science

Aug 2022 – May 2024

Albany, NY

Vignana Bharathi Institute of Technology

Bachelor of Technology in Electronics and Communication Engineering

Aug 2018 – May 2022

Hyderabad, Telangana

Experience

HubGroup

Data Engineer

May 2024 – Present

Albany, NY

- Migrated 20TB+ of data from on-premise systems to Azure Data Lake Storage and Synapse Analytics, ensuring 99.9% data availability and integrity.
- Developed high-performance ETL pipelines in Azure Databricks using PySpark, reducing pipeline runtime by 40% and enabling near real-time analytics.
- Optimized T-SQL queries and indexing strategies, reducing query runtime by 40% and improving data retrieval efficiency in large datasets.
- Designed optimized Synapse Analytics schemas, implementing dynamic data masking and partitioning, improving query performance by 35%.
- Automated data workflows using Azure Data Factory, reducing manual intervention by 70% and operational costs by 25% through ARM template-based deployments..
- Built Power BI dashboards to enable real-time business insights, reducing report generation time by 60%, supporting executive decision-making..
- Integrated Snowflake for scalable data warehousing solutions, enabling efficient cross-cloud data processing and analysis.

University at Albany - SUNY

Data Analyst, Student Assistant

Sep 2022 – Jan 2024

Albany, NY

- Implemented Generative AI-powered dashboards using Power BI and Azure OpenAI, providing actionable insights for strategic energy optimization.
- Streamlined GenAI workflows with Azure Functions and Python, reducing manual intervention and enhancing processing speed by 35%.
- Migrated on-premise SQL databases to Azure Blob Storage and optimized T-SQL workflows for warehouse operations, reducing data update times by 40%.
- Migrated on-premise systems to Azure Cloud, leveraging Azure Cognitive Services for intelligent data processing and classification.

Cognizant

Data Analyst Intern

Jan 2022 – Jun 2022

Hyderabad, India

- Optimized data pipelines and workflows using Azure Databricks, Hive, and Kafka on Azure HDInsight, enhancing processing efficiency within distributed systems.
- Automated data workflows with Azure DevOps pipelines, reducing manual intervention and streamlining data analysis processes.
- Created interactive dashboards and reports in Power BI and SQL, enabling stakeholders to make data-driven decisions with real-time insights.
- Managed secure data storage and retrieval with Azure Cosmos DB and Azure Key Vault, ensuring data integrity and compliance.
- Improved collaboration and delivery through Azure DevOps pipelines and implemented ELT methodologies for better data handling.

Green Tree Solar Solutions

Data Engineer

Jan 2019 – Dec 2021

Hyderabad, India

- Optimized Synapse Analytics schemas with dynamic data masking and partitioning, boosting query performance by 35%..
- Developed stored procedures and user-defined functions to automate data transformations, enhancing ETL workflows and ensuring data consistency.
- Automated ETL pipelines using Azure Data Factory, reducing manual tasks by 70% and lowering costs by 25%.
- Developed Power BI dashboards for real-time KPIs, cutting report generation time by 60% and enhancing data-driven decisions.
- Collaborated with stakeholders to extract actionable insights, aligning data trends with strategic business objectives.

Projects

Scalable Data Lake for E-commerce Analytics | *Azure Data Factory, Azure Data Lake Storage, Databricks, Synapse Analytics,*

- Built a data lake on Azure Data Lake Storage and Databricks to process large-scale clickstream and transactional data.
- Enabled insights with Synapse Analytics and Power BI dashboards, improving targeted marketing efficiency by 30%.

Intelligent E-commerce Chatbot | *Python, GPT-4, LangChain, E-commerce APIs (Shopify), Twilio/Telegram for chatbot*

- **Features:** Personalized product recommendations, real-time inventory checks, automated checkout, and order tracking.
- **Impact:** Improves customer engagement and experience by offering tailored shopping advice and automating purchasing processes.

Technical Skills

Languages: Python, PySpark, R, SQL (T-SQL).

Cloud Platforms: Snowflake, Azure (Data Factory, Databricks, Synapse Analytics, Data Lake Storage, Blob Storage, Functions, Purview, Key Vault).

Data Tools: Azure Synapse Analytics, Databricks, Excel, Hadoop, Hive.

BI Visualization: Power BI

Frameworks: PyTorch, TensorFlow, Scikit-learn.

Concepts: ETL/ELT, Data Modeling, Data Governance, Workflow Orchestration, Real-Time Streaming, Big Data technologies, Machine Learning.
