Phone: +1 502-219-4528

Louisville, Kentucky, United States.

Highly seasoned and accomplished Senior QA Automation Engineer, Lead and Business Analyst with a track record of over 11+ years in spearheading all facets of the Software Testing Life Cycle (STLC) and Software Development Life Cycle (SDLC). Proficient in crafting comprehensive Test Strategies, Test Plans, Test Cases and the Automation of Test Scripts. Extensive experience and domain expertise in Banking, Finance, Oil & Gas and Insurance sectors contributing to the successful delivery of high-quality software solutions. Equipped to excel both independently and as an integral team member, possessing a strong blend of technical proficiency and business acumen to drive project success.

PROFESSIONAL SUMMARY:

- **Leadership Roles:** Successfully served as a Senior Test Analyst, Team Lead, and Business Analyst, leading and managing teams while ensuring project success.
- **Broad Testing Proficiency:** Skilled in Functional Testing, Performance Testing, API Testing, Regression Testing, Back-end Testing, Mobile Testing, Sanity Testing, GUI Testing, Database Testing, System Testing, Build Verification Testing, Integration Testing, and Retesting .
- **API Testing Expertise:** Experienced in API testing using SoapUI, Swagger, and Postman.
- **Multi-Platform Testing:** Demonstrated ability in Web, Windows, and Mobile Application Testing, including Macmini, Router, iPad, real devices on Pcloudy.
- **SDLC and Agile:** Profound understanding of Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC). Experience in Agile Scrum methodologies, including daily scrum calls, sprints, retrospectives, effort estimation, grooming, and backlog refinement.
- **Test Management Skills:** Proficient in creating Test Suites, managing impediments, executing Test Cases (TCs), Product Backlog Items (PBIs), and Bug Reporting using ADO (Azure DevOps) and HP ALM/QC (Quality Center).
- **Automation Tools:** Expertise in Tricentis Tosca Automation Testing, including developing Test Scenarios, Test Suites, Test Cases, Test Procedures, and Test Reports.
- **Business Analysis:** Successfully served as a liaison between business stakeholders and technical teams, eliciting, specifying, and validating business needs, improving processes, and implementing solutions.
- **Requirements Gathering:** Conducted interviews and meetings to gather customer requirements through workshops, questionnaires, and surveys.
- **Effective Documentation:** Proficient in developing and utilizing standard templates for accurate and concise requirements specifications. Translated customer requirements into clear, developer-friendly functional requirements.
- **Quality Assurance:** Strong background in Quality Assurance of GUI-Based and Client Server Applications.
- **Domain Expertise:** Experienced in Finance, Insurance, Oil & Gas, Banking and TCS Bancs Application domains.
- **Database Proficiency:** Conducted back-end testing by writing SQL queries with databases like Oracle, MySQL, and MS SQL Server.
- **Defect Tracking:** Proficient in using Defect tracking tools, including JIRA, qTest, Azure DevOps, and Quality Center/ALM to monitor test progress, execution, and deliverables.
- **Training and Optimization:** Received training in implementing test automation scripts for API testing using Tosca.

Actively contributed to process development and implementation, prioritizing improvements.

- **Strong Communication:** Excellent communication and interpersonal skills, capable of working independently and collaboratively in cross-functional and global teams.
- **Resource Management:** Proficient at optimizing resource allocation to meet tight schedules and program milestones.
- **Documentation Skills:** Strong documentation skills with an analytical problem-solving approach, ensuring on-time and complete project deliverables.

Technical Skills:

Methodologies	Agile, Waterfall.
Testing tools	TOSCA, Selenium with BDD cucumber
Skill Set	Mobile application testing through router/ipad/Mac mini, Tosca Automation Testing, API Testing using Postman/Swagger/SOAP UI, Database testing, Regression Testing, Manual testing, Creation of feasibility, impact, requirement analysis, and traceability matrix documents, Analytical problem solving capabilities, Business structure understanding.
Databases	MYSQL, SQL Server
Browsers	Internet Explorer, Mozilla Firefox, Google Chrome, Microsoft edge.
Applications	Web Application, API, Mobile, Pcloudy, Maximo
Operating Systems	Windows
MS office Tools	MS Outlook, MS Word, MS Excel, MS PowerPoint, MS Access, MS Visio
Defect Tools	JIRA, HP ALM/Quality Center, Azure DevOps.
API testing	SOAP, POSTMAN, Swagger.
Test Approaches	Waterfall, Agile/Scrum, SDLC, STLC, Bug Life Cycle.

Education:

Master of Technology in Computer Science from Jawaharlal Nehru technological University, Hyderabad (JNTU) with distinction in 2014.

Bachelors of Technology in Computer Science Jawaharlal Nehru technological University, Hyderabad (JNTU) with distinction in 2012.

Work Experience:

Client- TIAA

Project- Maximo Asset Management

Company: Ardor IT Systems Aug 2023 – Till Date

Role: Test Lead

Responsibilities:

- Developed comprehensive test plans, defining clear objectives, strategies, and entry/exit criteria for testing Maximo Asset Management.
- Executed effective test planning to ensure thorough coverage of business processes within the Maximo application.

- Designed detailed test cases, scenarios, and scripts for various Maximo modules, ensuring a systematic approach to testing.
- Successfully executed manual and automated testing procedures, validating the functionality and performance of Maximo.
- Identified, logged, and tracked defects using a structured defect tracking tool, collaborating with development teams for timely resolution.
- Conducted rigorous regression testing to verify that new enhancements or fixes did not adversely impact existing functionalities in Maximo.
- Demonstrated expertise in efficiently managing defect lifecycles to enhance the overall stability of Maximo.
- Validated integration points within Maximo, ensuring seamless interactions with other systems and modules in the enterprise architecture.
- Maintained detailed documentation, including comprehensive test cases, scripts, and testing results for effective knowledge transfer and future reference.
- Collaborated effectively with business analysts, developers, and stakeholders to understand requirements, contributing to a cohesive testing process.
- Successfully contributed to UAT planning by drafting comprehensive test scenarios, test cases, and run plans, leading to effective manual UAT execution.
- Demonstrated leadership skills in effectively managing testing teams, fostering collaboration, and ensuring successful project delivery.

Client- Schlumberger

Project- MT Ecosystem

Company: Schlumberger

April 21 – June 23

Role: Test Lead/BA

Responsibilities:

- Lead a team of 8 people with multiple modules assigned under me, including test case creation, review by PO, uploading to ADO, and execution and manage impediments and production bugs in ADO.
- Collaborate with business users during workshops, facilitating requirements documentation, and new feature development.
- Interacting directly with business users during workshops to document and analyze their requirements and help in designing & developing new functionality of the application.
- Maintaining oversight on all on-going and production projects and help with fixing critical issues.
- Mentor the business rules development team to use best practices and improve the quality & reusability of rules code.
- Developed process diagrams and data flow diagrams that improved understanding of system.
- Attending Sprint Demo, Retrospective, Sprint planning, and effort estimation call and Preparing Impact analysis, feasibility analysis, requirement QA analysis documents.
- Sharing monthly MT QA Status for the competency pillar, Internal QA discussion related to any clarification/issues.
- Conduct comprehensive end to end testing of mobile/Web applications across various platform and devices using the PCloudy platform (Apps like- like MT Shop inspection, MT Field tech, Asset care portal, MT Service, MT Stem, MT Point, MT equipment, MT Job, MT Profile, MT Meter reading, etc.)
- Participated in gathering requirements for the integration of various mobile iOS/Web applications like MT Shop inspection, MT Field tech, Asset care portal, MT Service, MT Stem, MT Point, MT equipment, MT Job, MT Profile, etc.
- Arranging/mentoring MT QA team for MT applications and new joiners.
- Take ownership of applications and projects including identifying issues, proactively looking for solutions and delivering on milestones.

- Worked in collaboration with the development team to develop new logic to write vocabulary for business rules.
- Collaborating with support/Developer team for understanding the API services via swagger and then helping MT QA team.
- Involved in preparing mock up docs for MT projects in power BI and visually impactful presentations that effectively conveyed complex ideas, data findings, including data visualizations, charts, and graphical elements, and presented to stakeholders on each sprint, and worked on their feedback in order to improve efficiency & adaptation of the application by SLB users globally.
- Implement exploratory session-based testing, Common Repository setup, Tosca server installation, License Management and qTest to Tosca integration in Project.
- Automate testing scenarios using TOSCA for MT Web/API Applications.
- Implementing key TOSCA features in Automation assignment like Requirement Mapping, Test Case Design, Test Case, Test Execution and Modules which are reliable, robust, and reusable.
- Executing the test cases through scratch book and executions lists, and generating the test reports. Linking the test results to the requirements.
- Monitoring of software development processes to enhance performance and efficiency.
- Anticipates and appropriately escalates on forthcoming issues and risks of the software solution.
- Effectively communication insights and plan to cross-functional team members and management.
- Prioritizing requirement based upon different attributes agreed by the business.
- Monitoring deliverables and ensure timely completion through collaboration and daily stand-up meetings.

Client- Schlumberger

Project- CMS (Competency Mgmt system)

Company- Schlumberger

Dec 16 -Mar 21

Role: Test Lead

Responsibilities:

- Lead and manage a team of 6 testers, ensuring effective allocation of tasks, monitoring their progress, and providing guidance and support to achieve project goals. Managed automated testing processes, including scripting and maintenance.
- Worked like a SME and POC for the Team to give resolution for the various queries of Tosca tool.
- Create Trouble shoot documents and best practice document for project.
- Committed to ensuring software product quality and reliability through systematic testing and validation.
- Skilled at working collaboratively with cross-functional teams, including developers, product managers, and QA teams.
- Participated in the identification, understanding, and documentation of business requirements, keeping in mind the need for the application based on the project Scope and SDLC methodology using agile and Waterfall methodologies.
- Worked with development managers and trade show organizers to translate the business requirements into functional requirements FRD and non-functional requirements that supported overall strategy, goals, and objectives.
- Created Use Case scenarios, documented planned work-flow business processes, traced Requirements to High Level Design, Test Cases and Product Requirements. Assisted scrum master with the scheduling and execution of implementation tasks.
- Develop creative solutions to complex problems, validate requirements with stakeholders, and provide the optimal IT solution using JIRA and HP ALM.
- Worked with production staff to develop functional requirements, identify and map detailed current processes, identify gaps and failure points, perform root cause analysis.
- Involved in proof of concept (POC) for automation of Web application using selenium with BDD cucumber framework.

- Knowledge in creating and managing a Test Data Repository (TDM) using TOSCA TDM, ensuring the availability of high-quality test data for test automation efforts.
- Experience in creating test suite for web application using selenium with BDD cucumber framework and UFT.
- Involved in developing **Test cases, Modules, Requirements, Test Executions, Test reports and issues using Tosca**. Creating manual Test cases in QTest.
- Good hands on experience in TOSCA automation tool, Framework development, automating the regression pack, script execution and failure analysis.
- Work experience in **Tosca Server installation** for Test Data Management and Test Data service. Experience in **License Management** for multiuser workspace in Tosca.
- Worked on **qTest** as a Test Management tool, for creating and managing manual test cases.
- Integrated **qTest with Tosca** and with other project management tools such as HP ALM, Jira, and Azure DevOps.
- Generating the test reports, linking the test results to the requirements.
- Understanding the automation issue resolution from QA Practice team and take them up for QA team.
- Led diverse business, technology, and testing teams through matrix management, fostering collaboration and delivering successful outcomes.
- Effectively bridged cross-functional gaps, aligning teams to achieve project goals and ensure efficient resource utilization.
- Involved in integrating testing process into CI/CD pipeline using Git Hub and share automation reports to QA managers, Development team and Stakeholders
- Provide sprint /iteration release application demo to Product team.
- Involved in daily scrum, sprint, retrospective, defect triage, grooming, and demo meetings.
- Performed back-end testing by writing SQL queries with various Databases like MYSQL, MS SQL Server.
- Present implemented functionality to stakeholders every two weeks.
- Participate in knowledge sharing between team members, and Provide first line support for competency issues and escalate where appropriate.
- Late night calls with onsite stakeholders to update on QA tasks for competency pillar and highlight issues, if any.

Client- Old mutual wealth, Australian mutual provident society (AMP), SJP

Project- Bluedoor Registry

Company- DST Worldwide Services

Nov 15 – Oct 16

Role: Senior Test Engineer

Responsibilities:

- Participated in Business and Functional Document reviews to ensure accurate project understanding.
- Conducted comprehensive testing of various transaction systems, including deposits, withdrawals, transfers, and more, ensuring the reliability of financial processes.
- Supported critical functions such as Adviser setup, Client management, model portfolios, Asset management, Investment Super, and retirement product account management, Corporate action, Withdrawal, Switch, Rebalance, Transfers-In/out,.
- Collaborated with cross-functional teams to raise and clarify business requirements, ensuring a shared understanding of project goals.
- Developed test scenarios and test cases, ensuring comprehensive test coverage and validation.
- Executed test cases, meticulously analyzed test results, and reported defects to maintain software quality.
- Actively participated in User Acceptance Testing (UAT), Regression Testing, and Smoke Testing, Performance, Load and stress testing throughout project lifecycles.
- Verified defects, ensuring the identification and resolution of issues affecting system functionality.
- Provided constructive feedback to peers, contributing to improved work quality and adherence to best practices.

- Demonstrated a clear understanding of Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC), and Agile methodologies.
- Actively involved in the deployment of project builds using Octopus, contributing to efficient project management.
- Conducted API Testing of web services using SOAP UI, ensuring the functionality and security of these services.

Client- Skandia

Project- Old Mutual International Enhancement

Company- CAPITA-Contract

June 14 - Oct 15

Role: Senior Test Engineer

Responsibilities:

- Proficiently participated in Business and Functional Document reviews to ensure alignment with project goals and objectives.
- Actively engaged in raising business requirement clarifications, fostering a clear understanding of project requirements.
- Involved in validating operations such as account management, funds transfer, deposits, withdrawals, loan processing, and other financial transactions.
- In-depth knowledge of the institutional settlement process and its implications for testing procedures, facilitating thorough and accurate testing execution.
- Contributed to the creation of comprehensive test scenarios and test scripts, aligning them with business needs and software functionality.
- Diligently executed test cases, analyzed test results, and reported defects to support software quality and reliability.
- Verified defects, demonstrating meticulous attention to detail in problem identification and resolution.
- Actively participated in peer reviews, providing valuable feedback to improve project outcomes.
- Demonstrated exceptional oral and written communication skills, effectively collaborating with cross-functional teams, including developers and business analysts.
- Proven experience in UAT planning, including the creation of detailed test scenarios, test cases, and run plans. Executed manual UAT with precision, capturing evidence meticulously and effectively tracking defects with a keen eye for detail.
- Evaluated and enhanced the current QA process, contributing to continuous process improvement.
- Proactively identified and raised risks/impediments affecting testing activities during daily scrum meetings, fostering transparency and problem-solving.
- Prepared and shared daily testing status, testing summaries, and detailed weekly status reports to keep stakeholders informed.

Client- Skandia

Project- Old Mutual International

Company- CAPITA-Contract

June 14 - Dec 14

Role: Test Engineer

Responsibilities:

- Proficient in developing comprehensive test cases and executing test scripts, ensuring the thorough testing of software applications.
- Possess extensive knowledge in Quality Assurance for GUI-based and Client-Server applications, guaranteeing high-quality user experiences.
- Leverage strong project management skills to oversee and coordinate test execution across all project areas, ensuring project success.
- Proactively identify and address risk areas to maintain seamless coordination of test activities throughout the project lifecycle.

- Possess in-depth knowledge in bug reporting and tracking, ensuring that issues are documented and addressed effectively.
- Experienced in the preparation and documentation of test cases, facilitating effective testing processes.
- Proficient in testing TCS Bancs Application, a comprehensive banking, financial software solution, DTCC platform.
- Developed and executed test cases and test scripts, ensuring the quality and reliability of TCS Bancs Application modules.
- Conducted various types of testing, including functional testing, regression testing, and integration testing, to validate the application's functionality.
- Collaborated closely with business analysts and development teams to understand project requirements and ensure accurate test coverage.
- Leveraged TCS Bancs Application's domain knowledge to create realistic and industry-specific test scenarios.
- Utilized HP ALM defect tracking tools to report, monitor, and manage software defects, ensuring effective issue resolution.
- Played a crucial role in User Acceptance Testing (UAT) to validate that the TCS Bancs Application meets end-user expectations and business requirements.
