EDUCATION

The University Of Texas at Arlington

Master's in Data Science

May 2024

GPA 3.9

Coursework: Database Systems, Data Mining, Data Science, Project Management, Foundations of Computing, Deep Learning and Neural Networks, Machine Learning, Capstone Project, Probability and Statistics, Bioinformatics.

Kolhapur Institute of Technology, College of Engineering (Autonomous), Kolhapur

Bachelors in Computer Science and Engineering

May 2022

GPA 3.87

Data Structures, Database Engineering, Computer Networks, Cloud Computing, IOT

SKILLSET

- **Languages:** Python (Numpy, Pandas, Matplotlib, Nltk, Keras, Tensorflow), R, Matlab, HTML, CSS, JS, React, C, C++, Basic and Core JAVA.
- **Technology:** Statistical and Exploratory Data Analysis, Tableau, Microsoft Power BI, Weka, Data Science, Data Modelling, Big Data Technology, Machine Learning Algorithms, Microsoft Excel and Office, Cloud Computing, AWS, Microsoft Azure, NLP, Data Mining, Oracle RDBMS, SQL, Android Development (Java and XML), Data Visualization, Deep Learning,
- **Soft Skills:** Exceptional communication and presentation abilities, adept critical thinking and problem-solving skills, strong teamwork and collaboration aptitude, adaptability, effective time management, and a highly curious nature.

EXPERIENCE

Data Science Intern, Infogen Labs Inc., California

May 2023 - August 2023

- Developed and implemented data models, algorithms, and statistical analyses using OpenAI tools, including Code Interpreter.
- Applied machine learning techniques such as deep learning, reinforcement learning, and natural language processing.
- Recorded ChatGPT replies and transformed Mermaid code into appropriate visual representations.
- Solved complex problems and improved business outcomes through the application of OpenAI-based solutions.
- Identified and prioritized business opportunities that could be addressed with OpenAI-based solutions.
- Collaborated effectively with cross-functional teams to achieve project objectives.

Associate Developer, Veloce Techinsights Pvt Ltd, India · On-site

December 2021 - June 2022

- Constructed a streamlit application leveraging a Time series prediction model developed with fbprophet,
- Contributed to a real-time flood monitoring and prediction system, improving disaster management efficiency by devising various Deep Learning Models for Flood Prediction, enhancing the accuracy of flood forecasting in Kolhapur region.
- Engaged in an IOT based Project for Saroj Industries, improving their operational efficiency by displaying live data on dashboard and conducted analysis to determine the root reasons of machine downtime also collaborated on a machine monitoring platform using Python and the TCP/IP protocol to collect data from Mitsubishi and Siemens PLCs. improving machine uptime and productivity.
- Served as a Front End Developer in building web applications for clients, enhancing user experience and client satisfaction.

Data Scientist, 1Stop.ai, Bengaluru

August 2021 - December 2021

- Developed a Parkinson's Disease Detection model by utilizing an XGBClassifier and the sklearn library to construct the dataset, resulting in accurate disease prediction.
- Addressed the issue of fake news by creating a TfidfVectorizer using a political dataset, initializing a PassiveAggressive Classifier, and fitting the model to it, which significantly improved the detection of false information.

PROJECTS

- **Sentiment Analysis on Large Movie Dataset:** Performed sentiment analysis on coco movie dataset using BERT and LSTM deep learning algorithms and found that LSTM works better for this dataset with accuracy of 88.06%.
- **Melanoma Detection with Deep Learning:** this project compared two custom-built models with pre-trained VGG16 and ResNet50 where our second model outperformed all other models with respect to precision, f1-score, recall and accuracy.
- **Bank Data Analysis:** Conducted thorough exploratory data analysis over banking data using R and python. performed data exploration, cleansing, generated various data models namely random forest, decision tree, nearest neighbor, Naïve Bayes and support vector machine and finally concluded that random forest works best among all listed with accuracy of 92.07%.
- **Diabetes Prediction:** Conducted thorough exploratory data analysis, prepared data with treating null values, categorical values then scaled data and used mutual information gain for feature elimination, used gridsearch to avoid overfitting and implemented various ML models and concluded that KNN stands out as the best-performing model, demonstrating higher accuracy, balanced accuracy, and AUC compared to others. Hence KNN can be used for diabetes prediction
- **COVID 19 Data Analysis India:** analyzed COVID 19 state wise dataset and visualized results via tableau dashboards.
- **Experiential Data Collection and Descriptive Statistical Analysis:** For the project, two datasets have been obtained: one physically from the UTA Sustainable and Intelligent Manufacturing (SIGMA) Lab, and the other via the Kaggle website.
- **New York Motor Vehicle Collisions Analysis:** Deep analysis was done on the accidents that happened in New York in 2012 and 2014 using numpy and pandas, and matplotlib library was used to illustrate the results.
- **DBLP data set analysis:** Conducted Graphical analysis on the DBLP data set using NetworkX library of python.
- **Carpool and Car Rental System:** In order to achieve commercial goals, we built a database from the ground up for an integrated carpooling and rental system using ad hoc SQL queries. Successfully designed and implemented a comprehensive database system.
- **IMDB Data Analysis:** Wrote SQL analysis queries to perform the analysis, and used Excel to visualize results.

CERTIFICATIONS

- Microsoft 98381 : Globally Certified in Introduction to Programming using Python by Microsoft FEBRUARY 2021
- AWS Academy Machine Learning Foundations DECEMBER 2021
- AWS Academy Data Analytics MAY 2022
- Data Science Professional Certification training by IBM (Coursera) FEBRUARY 2023
- Data Analyst Professional Certification training by IBM (Coursera) FEBRUARY 2023
- Google Data Analyst Professional Certification (Coursera) FEBRUARY 2023
- AWS Academy Cloud Foundations DECEMBER 2021
