

Adithya B

Data Analyst

Decatur, GA | (404) 981-4456 | adithya.b2825@gmail.com

SUMMARY

Data Engineer & Analyst with over 4 years of experience specializing in **ETL** development and **big data analytics** across **financial services** and **energy sectors**; designed and deployed high-volume ETL pipelines, improving trade reconciliation processes by 20%. Led dashboard creation using **business intelligence tools** for tracking investment portfolios, enhancing decision-making for executives; recognized for compliance with **SOX** and **Basel III** regulations while optimizing workflows through advanced analytics using **Python**, **SQL** and **Cloud** technologies.

SKILLS

- **Data Analysis:** Data Warehousing, Business Intelligence Data Mining, Statistical Analysis, A/B Testing, Hypothesis Testing, Cost Optimization.
- **Programming Languages:** Python (Pandas, NumPy, Matplotlib, Scikit-learn, Flask), R, SQL
- **Visualization Tools:** Tableau, Power BI, Microsoft Excel, SSRS
- **Database Management:** MySQL, PostgreSQL, SQL Server, Oracle, Big Query, MongoDB
- **Data Engineering Tools:** Snowflake, Databricks, Hadoop (HDFS), Hive, Apache Spark, Kafka.
- **ETL Tools:** Informatica, Talend, Apache Nifi, SSIS
- **Version Control& CI/CD:** Git, Jenkins, Docker
- **API Development Integration:** RESTful APIs, JSON.
- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud Platform (GCP).
- **Project Management:** Scrum, Jira, Trello, Confluence.

WORK EXPERIENCE

Data Engineer

JPMorgan Chase & Co, GA

Jun 2024-Current

- Designed and deployed ETL pipelines using **Talend and AWS Glue**, processing high-volume financial transactions to support real-time risk analysis and fraud detection.
- Transformed the data querying process by re-engineering warehouse structures within **Snowflake**; achieved a 30% reduction in processing time while maintaining high accuracy levels during critical trading periods.
- Streamlined data integration workflows between **Hadoop HDFS** and **SQL Server**; enabled real-time tracking of financial transactions, reducing manual reconciliation time by 5 hours each week through enhanced automation techniques.
- Spearheaded creation of informative dashboards using **Tableau** to track key metrics related to investment portfolios and liquidity levels, promoting better-informed decisions among executives with regular updates presented monthly.
- Applied machine learning models using **TensorFlow** and **PyTorch**, enhancing predictive analytics and forecasting accuracy by 35%, while leveraging **NumPy**, **Pandas**, and **Matplotlib** for efficient data manipulation and visualization, and integrating **Java**-based solutions for seamless deployment.
- Led the migration of 50GB+ of transactional data from on-premises systems to **AWS Redshift**, enhancing reporting efficiency and optimizing financial analytics for regulatory compliance.
- Implemented **Apache Airflow** for ETL workflow orchestration, automating data pipelines with **PySpark**, reducing pipeline failures by 30% and improving operational resilience.
- Ensured compliance with financial regulations (**SOX**, **Basel III**, **CCAR**, **GDPR**) by enforcing **data governance policies and security controls** within Snowflake and SQL environments.

Data Analyst

KPMG, India

Mar 2021 – Dec 2022

- Conducted **exploratory data analysis (EDA)** on 200+ datasets for client portfolio insights using **SQL** and **R**, streamlining data pipelines for accurate reporting.

- Developed interactive financial dashboards in **Power BI** using **Power Query** and **DAX**, optimizing data transformation and analysis, reducing manual reporting efforts by 40%, and enhancing decision-making for financial forecasting.
- Standardized **data wrangling processes** for unstructured datasets, integrating insights into **MongoDB**, improving query efficiency by 20%.
- Coordinated closely with stakeholders across departments during development sessions focused on creating an efficient **data governance model**, resulted directly in gains regarding audit readiness timelines by 15% monthly.
- Transformed financial data processes by leveraging **Big Query**, resulting in a 35% decrease in query execution duration while providing crucial real-time insights for revenue prediction and regulatory adherence.
- Engineered scalable **data pipelines** using **Informatica**, reducing ETL processing time for monthly client reporting by 3 hours.
- Enhanced financial data processing by leveraging **Oracle Cloud Infrastructure (OCI)** to optimize ETL workflows, reducing data ingestion time by 30% and improving query efficiency for financial reporting.

Associate Data Analyst
Adani, India

Jan 2019- Feb 2021

- Analyzed energy consumption, logistics, and supply chain data using **SQL Server and Tableau**, generating reports to optimize infrastructure planning and operational efficiency.
- Performed **root cause analysis** on data discrepancies across power, gas, and infrastructure systems, implementing data-wrangling solutions that improved forecast accuracy and asset utilization.
- Developed predictive models in **SAS** to assess coal import demand and power distribution efficiency, supporting strategic energy trading decisions.
- Optimized ETL pipelines using **Databricks** for processing real-time industrial data, reducing data transformation time by 35% and improving logistics tracking.
- Designed **QlikView dashboards** to monitor energy production, distribution, and asset performance, enabling data-driven resource allocation across projects.
- Developed and optimized complex **SQL queries, stored procedures, and views** to enhance data retrieval efficiency by 40%, improving financial reporting and investment analysis.
- Applied **Looker** for data visualization, writing complex **T-SQL** queries to extract insights, integrating **RESTful APIs** and **JSON** for seamless data exchange, enhancing report generation efficiency by 40%.
- Automated operational and financial reporting using **Excel (VLOOKUP, PivotTables, Macros)**, reducing manual reconciliation time by 40% for asset management and capital expenditure tracking.
- Implemented **Azure Data Factory ETL pipelines** to integrate real-time sensor data from infrastructure sites, enhancing monitoring of power grids and renewable energy assets.
- Deployed **CI/CD pipelines in Azure DevOps** to automate data ingestion and reporting workflows, ensuring timely project execution and regulatory compliance.

EDUCATION

Masters in Management Information Systems Auburn University at Montgomery, AL	Jan 2023 - May 2024
BTech in Computer Science CMR Engineering College, India	Aug 2015 - Jun 2019

CERTIFICATIONS

Microsoft Certified: **Azure Data Engineer Associate** (ID: 5D4A4EAB2B77821A)
