

SUMMARY

Software Developer with two years of experience in back-end development, cloud computing, and enterprise software solutions. Experienced in optimizing high-transaction applications, automating workflows, and integrating cloud technologies. Skilled in collaborating with teams and improving software performance.

PROFESSIONAL EXPERIENCE

- Software Developer II** Cottonwood, MN
North Star Mutual Insurance Company *June 2023 - Present*
 - Developed and optimized existing UNISYS based COBOL-85 backend systems to improve performance, reduce processing time, and accommodate insurance policy and regulation changes.
 - Led the backend implementation of a policy conversion application during a merger, successfully converting over 60,000 policies with zero data integrity issues and ensuring 100% regulatory compliance within a 2-month timeline.
 - Executed the full SDLC, including requirements analysis, system design, coding, testing, deployment, and ongoing support in a high-transaction codebase.
 - Automated batch processing workflows, reducing data conversion time by 75% using Excel scripting and backend integrations, resulting in faster and more efficient operations.
- Salesforce Application Developer** Minneapolis, MN
Technologist Computers *October 2022 - March 2023*
 - Engineered custom mobile application features utilizing Apex, Salesforce Flows, and Lightning Web Components, leading to a remarkable boost in application functionality and user productivity.
 - Implemented complex data modeling and database design, optimizing Salesforce data architecture for improved performance and scalability.
 - Improved data accuracy by up to 30% through integrating a barcode scanner with a barcode API, allowing real-time inventory tracking and improving data accuracy.

EDUCATION

- Southwest Minnesota State University** Marshall, Minnesota
Bachelor of Science in Computer Science, and Applied Computational Mathematics *2023*

PROJECTS

- Cloud-Hosted Trading Algorithm(2024):** Developed an MQL4-based algorithm utilizing an RSI-driven strategy to automate trade execution, achieving a return of 65.25% over three months. Deployed on a cloud VPC for enhanced scalability, reliability, and real-time performance.
- Scheduler for Pet Care Service(2025):** Developed a *python* based automation program using *selenium* library to schedule and send email notifications for a pet care service opening, saving more than 2 hours of personal time daily.

QUALIFICATIONS AND CERTIFICATIONS

- Programming Languages:** C++, Python, COBOL, JavaScript, RPG
- Technologies & Tools:** AWS (Lambda, EC2, VPC, DynamoDB), Salesforce (Apex, LWC), UNISYS, Linux, Visual Studio, Git
- Skills:** Software Development and Design, Cloud Computing, Data Structures and Algorithms, CI/CD, Communication and Problem Solving skills
- Certifications:** AWS Certified Associate Developer (February 2025), CodePath Intro to Cybersecurity (April 2023)
