EDUCATION

University of Cincinnati

Cincinnati, Ohio

Master of Science in Information Technology

April, 2024

GPA: 3.96/4.0

Courses: Data Mining and Machine Learning, Principles of Cybersecurity, Technologies for mobile application, Human computer Interaction, Data Driven Cybersecurity, IT Infrastructure Sustainability.

ACADEMIC PROJECTS

- Predict Customer Churn using Data Mining and Machine Learning: Implemented a data science project using NumPy, Pandas, and Scikit-Learn to predict customer churn in e-commerce. Leveraged a Random Forest Classifier for effective binary classification.
- Anticipating the Future - Analyzing Home Prices Using Advanced Machine Learning Methods: Conducted an in-depth analysis of real estate market trends by employing advanced machine learning methods. Developed predictive models for home prices, integrating features like location, amenities, and economic indicators. Provided valuable insights for stakeholders, aiding in strategic decision-making within the real estate industry.
- Credit Risk Assessment in Financial Services: Independently implemented a machine learning project in financial services, enhancing credit risk assessment. Applied advanced techniques such as logistic regression, decision trees, and Keras for deep learning. Result: Improved credit risk assessment, contributing to a more robust financial strategy.
- Fine-tuning LLAMA involving Large Language Models (LLMs): Executed user-specific refinement by implementing the fine-tuning process on open-source LLM models using custom data.
- Tree Clustering: Developed a machine learning project utilizing KMeans clustering to optimize tree spacing and mitigate the risk of wildlife fires by ensuring a strategic arrangement of trees. The implementation aimed at leveraging clustering techniques to enhance forest management practices and reduce the likelihood of fire spread.

WORK EXPERIENCE

Deloitte Analyst

Java Developer

Sep 2021 - Jan 2023

- Led enhancements to an E-commerce platform, implementing feature upgrades, refining existing functionalities, and optimizing user interactions to elevate overall performance and user satisfaction.
- Collaborated with UX/UI designers to implement responsive design principles, resulting in a 25 % improvement in user satisfaction and usability across various devices.
- Implemented logging and monitoring functionalities within the API to track data exchange activities, troubleshoot issues, and provide insights into system performance.
- Documented API specifications, including endpoint details, data formats, authentication methods, and error handling procedures, ensuring comprehensive documentation for future reference and onboarding.
- Implemented automated unit tests using JUnit, resulting in a 95% reduction in post-deployment issues and ensuring the reliability of the codebase.
- Maintained comprehensive documentation of code and development processes. Actively engaged in knowledge-sharing sessions to facilitate team-wide understanding.
- Ensured strict adherence to the Software Development Life Cycle (SDLC), from project initiation and planning through to deployment and maintenance.

Java Developer (SAP Commerce)

- Developed and implemented a custom cache strategy for targeted components resulting improvement in overall application performance.
- Conducted extensive user testing on existing assets to identify usability issues, providing recommendations for improvements that led to a 20 % increase in user satisfaction scores.

- Collaborated with cross-functional teams to identify inefficiencies in the current hybris tool suite installation process and led the development of Project Zero, resulting in a 50 % decrease in installation time.
- Offered technical assistance to team members, resolving challenges and providing mentorship on Java development best practices.
- Collaborated on the seamless integration of custom modules with third-party logistics and payment processing services, optimizing end-to-end order fulfillment workflows and enhancing overall system functionality.
- Integrated the Hybris e-commerce platform with external systems, including payment gateways, shipping providers, and customer relationship management (CRM) systems. Streamlined business processes and facilitated efficient data exchange.

Tata Consultancy Services Software Developer

Java Developer (Oracle Commerce/ ATG)

Jul 2019 - Aug 2021

- As a Java Developer in our e-commerce project, led the successful implementation of assigned incidents and user stories assigned to me. This involved a versatile skill set, encompassing both frontend and backend development.
- Customized and extended core ATG Commerce modules to align with specific business requirements, ensuring seamless integration of features such as cart management, order processing, and promotions.
- Integrated the ATG e-commerce platform with external systems, such as payment gateways, shipping providers, and customer relationship management (CRM) systems, to streamline business processes.
- Collaborated with QA teams and business stakeholders during User Acceptance Testing, providing technical support, addressing issues, and ensuring that the application meets business requirements.
- Worked collaboratively with cross-functional teams to ensure timely delivery of project milestones, consistently meeting or exceeding deadlines Proven track record of delivering high-quality projects within specified timelines exceeding deadlines by an impressive average of 3 %
- Participated in regular knowledge-sharing sessions within the team, contributing insights into emerging technologies and best practices.

SKILLS

Programming Languages: Java, Python, JavaScript

Tools: Visual Studio Code, Postman, Swagger, JIRA, Postman, Jenkins, BCC, Tableau, Jupyter

Frameworks: Spring, Oracle Commerce, React JS, PyTorch

System: Windows, Ubuntu

Databases: SQL

Version Control: Git, SVN

Methodology: Agile

Data Visualization Tools: Matplotlib, Seaborn

Libraries: Scikit-learn, Pandas, NumPy, XGBoost, Keras

Others: Rest API , Microsoft Azure

CERTIFICATIONS

Microsoft Azure Fundamentals
