SUMMARY

- Java Backend Engineer with 4+ years of experience building and operating production systems across **billing, payments, and document-processing platforms**.
- Currently working at **Intuit** on subscription billing and payment workflows, owning Spring Boot services that handle invoice generation, retries, and asynchronous payment events in a distributed environment.
- Strong hands-on background in **Java concurrency, event-driven systems**, and **database-backed APIs**, with real experience handling failure scenarios, external dependencies, and month-end production pressure.
- Previously built large-scale document ingestion and processing pipelines using **Java, RabbitMQ, and MySQL**, gaining a solid foundation in batch processing, reliability, and operational visibility.

EXPERIENCE

INTUIT

Jan 2025 - Current

Java Developer

- Owned **Spring Boot** services for **invoice generation** and **subscription state transitions**, supporting **recurring billing** across multiple pricing plans and customer tiers.
- Implemented **idempotent payment retry logic** in **Java** to safely handle **duplicate gateway callbacks**, preventing **double-charge incidents** during retry scenarios.
- Built **Kafka consumers** for **payment success, failure, and refund events**, ensuring **ordered processing** and consistent **ledger updates** across **asynchronous billing flows**.
- Tuned **PostgreSQL** queries and indexes used in **invoice** and **payment history** lookups, improving response consistency during **month-end billing windows**.
- Added **Redis caching** for frequently accessed **subscription metadata** and **pricing rules**, reducing repeated **database reads** on **high-traffic endpoints**.
- Applied **resilience patterns** (**timeouts, bulkheads, circuit breakers**) around **external payment dependencies** to protect **core billing APIs** from **cascading failures**.
- Integrated a lightweight LLM-based internal utility to summarize payment failure logs and retry traces for support teams during billing incidents.

ADONS SOFTECH

May 2020 - Jul 2023

Java Backend Engineer

- Built **Java Spring Boot** services to process large **PDF / CSV / XML** files from enterprise clients, extracting structured fields and persisting validated data into **MySQL** for downstream workflows.
- Designed a **multi-stage document processing pipeline** using **Java Concurrency (ExecutorService, BlockingQueue)** to handle validation, enrichment, and persistence tasks without blocking upstream ingestion.
- Integrated **RabbitMQ** to asynchronously route documents through validation and approval stages, smoothing traffic spikes and preventing backlog buildup during peak submission windows.
- Implemented **retry and failure-isolation logic** for malformed or partially corrupted files, ensuring individual job failures did not stall batch processing runs.
- Built modular **file parsers** using **Apache POI** and **Jackson**, allowing new document templates to be onboarded with minimal code changes when client formats evolved.
- Added **AWS S3 archival** with versioning and lifecycle policies to retain processed files and audit artifacts, reducing reliance on local storage and manual cleanup jobs.
- Exposed **operational endpoints** using **Spring Actuator** to track job status, queue depth, and processing errors, enabling faster debugging and operational visibility for support teams.

SKILLS

Backend Engineering: Java 8/11+, Spring Boot, Spring MVC, Spring WebFlux, REST APIs, Microservices, JPA/Hibernate, Java Concurrency, Resilience4j, GraphQL, Python(FastAPI, Flask, Django, Bash)
Messaging & Workflows: Apache Kafka, RabbitMQ, Event-Driven Architecture, Async Processing, Job Scheduling,
Databases & Caching: PostgreSQL, MySQL, Redis, Query Optimization, Transactions, Indexing, Connection Pooling
Cloud & DevOps: AWS ECS Fargate, AWS S3, Docker, Kubernetes (EKS), Jenkins CI/CD, CloudWatch
Monitoring & File Processing: Prometheus, Grafana, ELK Stack, Spring Actuator, Micrometer, CSV/XML/JSON
Development Tools & Practices: Git, GitHub Actions, Maven/Gradle, IntelliJ IDEA, Unit & Integration Testing (JUnit, Mockito), CI/CD pipelines, API Documentation (Swagger/OpenAPI), Agile/Jira

EDUCATION

The George Washington University
Master of Science in Computer Science

May 2025
Washington D.C.
