WORK EXPERIENCE

Hudson Advisors L. P, Dallas,Texas: Application Developer Intern May 2023 – Dec 2023

- Developed SQL-based applications, including an auto-generated PowerPoint application, optimizing manual efforts.
- Implemented SQL analytical functions for data analysis and reporting, contributing to informed decision-making.
- Orchestrated an automated data management system in Azure DataFactory, enhancing data processing efficiency.
- Engineered SQL-based processes for seamless data transfer and retention, improving traceability.

Factly Media and Research, Hyderabad, India: Data Science Intern Jan 2022 – Jul 2022

- Curated and extracted data using Python and SQL from diverse online sources, ensuring data accuracy.
- Conducted data management tasks, maintaining code accuracy and consistency.
- Created compelling data visualizations using Python libraries and tools such as matplotlib and Tableau.

Indian Space Research Organization (ISRO) , Gujarat, India: Data Science Intern Jan 2021 – May 2021

- Developed a Python-based pipeline for particle detector data, employing advanced techniques to enhance accuracy and quality.
- Successfully collected and classified cosmic ray detector data, achieving a 96% classification accuracy for test datasets.
- Implemented and tested various algorithms for event selection and noise reduction, utilizing machine learning methods for particle classification.

Zipbooks Software Solutions Pvt. Ltd., Gujarat, India: Python Developer Intern Jun 2021 – Jul 2021

- Engineered a facial recognition-based attendance system for students using deep learning techniques and CNN architecture with a high-resolution camera and Raspberry Pi.
- Achieved a remarkable 95% accuracy in recognizing students' faces.

ACADEMIC PROJECTS

Prediction of Crops

Data Science

- Implemented a machine learning model with 85% accuracy in forecasting crops based on environmental data.
- Preprocessed a dataset with 25 variables, addressing missing data, encoding categories, and scaling numerical features.
- Evaluated various ML models (logistic regression, decision trees, random forests, SVMs) to identify the most effective crop prediction model

Simple Voice Assistant/bot for PC

Natural Processing Language (Dialog flow)

- Developed diverse intents for weather updates, music playback, time, jokes, and information retrieval.
- Trained the assistant to understand human requests using specific model words and integrated text-to-speech using the Google Cloud Text-to-Speech API for voice responses

EDUCATION

Masters in computer and information Sciences Graduating May 2024

The University of Texas at Dallas, Texas, USA

3.8 GPA

Relevant coursework: Machine Learning, Big data and analysis, Database Design, Statistics for Data Science, Design and Analysis of Computer Algorithms

Bachelor of Technology, Computer Engineering Graduating May 2022

Indus Institute of Technology and Engineering, Gujarat, India

4.0 GPA

Relevant coursework: Software Engineering, Data Science, Data Mining, Cloud Computing, Operating Systems, Hardware Systems, Network Security, Artificial Intelligence, and Applications

SKILLS

Technical Skills: Proficient in Java, intermediate in C, and skilled in Python. **Data Structures and Algorithms:** Strong understanding and hands-on experience. **Cloud Technologies:** Experience with Microsoft Azure, AWS Cloud Tools, and open-source technologies. **Data Modeling:** Experience building scalable data models on Hadoop and relational systems. **Distributed Systems:** Knowledge of distributed storage systems, performance tuning, and optimizations. **Big Data Technologies:** Proficient with Apache Hadoop ecosystem including MapReduce, HBase, Hive, Spark, and Flink. **Consensus Protocols:** Understanding of distributed consensus protocols like Paxos and RAFT. **Version Control and Development Tools:** Git/GitHub, Jira, Jenkins, Postman, Splunk.
