SUMMARY

Data professional with experience in transforming complex datasets into actionable insights and designing scalable reporting solutions that drive strategic business decisions. Proven expertise in building interactive dashboards, semantic models, and self-service analytics platforms using Tableau, Power BI, and Looker. Skilled in statistical analysis, dimensional modelling, and KPI development to support cross-functional reporting and product initiatives. Experienced in translating stakeholder requirements into analytical frameworks, automating recurring reports, and presenting findings to both technical and non-technical audiences. Proficient in SQL and Python, with a strong foundation in data visualization, query optimization, and storytelling with data.

EDUCATION

Northeastern University

Master of Science in Data Analytics Engineering

Osmania University

Bachelor of Engineering in Computer Engineering

SKILLS

- **Programming:** Excel (VBA, pivot tables, array functions, power pivots), SQL, Python
- **Business Intelligence & Reporting Tools:** Power BI, Tableau
- **Statistical Analyses:** T-tests, Factor Analysis, Cluster Analysis, A/B testing, Regression, Correlation, Root Cause Analysis
- **Data Engineering:** Snowflake, Databricks
- **Cloud:** AWS, Azure
- **Others:** Requirements gathering, Stakeholder communication, Report writing, Process improvement, Dashboard development

EXPERIENCE

Data Analyst, KeelWorks

May 2025 – Present

- Partnered with program stakeholders to translate business requirements into analytical frameworks, defining metrics that measure employment outcomes and organizational impact
- Collaborated with program and fundraising teams to prepare data-driven donor and financial reports, demonstrating measurable social impact that contributed to \$500K+ in renewed grant funding
- Designed and built automated Tableau dashboards tracking operational KPIs across 3 global empowerment programs, enabling leadership to monitor performance against strategic commitments in real-time
- Developed ETL workflows to consolidate 2TB data from multiple sources into a unified reporting layer, improving data accuracy by 30% and ensuring timeliness for weekly executive reviews
- Improved accuracy of forecasting and reporting by 25% by resolving ETL process issues, strengthening confidence in operational insights
- Planned and analysed paid (Google Ads, Meta) and organic marketing programs; ran A/B tests and optimized creatives and landing pages improving click-through rates by 20% and reducing CPA by 15%
- Performed SQL and Excel based analysis to segment audiences, analyse attribution, uncover behavioural patterns, and identify high-impact growth opportunities that increased program enrolment by 7%

BI Analyst Co-Op, Synthons

July 2024 – Dec 2024

- Analysed prescription and market data to assess product performance across 5 sectors, identifying regional opportunities, increasing market share by 3%
- Conducted launch monitoring analyses, tracking prescriber adoption and providing weekly insights that accelerated time-to-target by 20%
- Evaluated patient adherence patterns across products, uncovering 3+ drop off stages and designed a retention initiative that improved refill rates
- Designed a product overview dashboard to track KPIs for 20+ products with Google Data Studio
- Partnered with commercial and marketing teams to measure campaign effectiveness and optimize field force allocation, improving promotional ROI

Data Analyst (Part-time), Northeastern University

May 2023 – May 2024

- Develop and maintain automated dashboards and real-time reports in Power BI and Google Data Studio, surfacing key metrics on admissions, marketing initiatives, and conversion trends
- Analysed marketing effectiveness and applicant demographics, influencing a reallocation of 20% of ad spend toward more effective outreach channels
- Partnered with Admissions and IT teams to reconcile data between CRM (Slate) and ERP systems, improving data reliability for better decision making

Associate Data Analyst, Azachem

Mar 2021 – Dec 2022

- Built and maintained data infrastructure including ETL pipelines, SQL Server data warehouses, and reporting systems that processed 500K+ daily transactions across procurement, logistics, and finance functions, enabling enterprise-wide analytics
- Delivered 25+ dashboards, reports, and ad-hoc analyses using Tableau, SSRS, and AWS QuickSight to support executive level decision-making
