I am a Data Analyst who created and maintained a data reporting system used by the product team and later other teams in Clutch.co. I've worked with other teammates to design and bring to life a data ecosystem that was used by more than 50 people daily. I'm excited to explore other opportunities in data analytics and adjacent fields.

WORK EXPERIENCE

Clutch.co

May 2023 - May 2025

Data Analyst

Washington DC

- Proposed and developed a tool to estimate how much value clients receive from each product and cooperated with stakeholders to deliver this data to sales teammates resulting in 4% increase of new sales YoY.
- Created a bot tracking tool that removed more than 97% of suspicious users from the final data.
- Implemented a sales service using python to connect data between internal database and google bigquery database.
- Reduced costs for bigquery by about 25% by optimizing existing sql code, updating database structure and identifying redundant dashboards.
- Designed and deployed automated data health checks to receive early warning about problems with the google tag manager events tracking preventing 3 incidents.
- Mentored 2 Data Analysts that were hired after me to ensure smooth onboarding.

Clutch.co

January 2022 - May 2023

Data Analysis (Intern)

Washington DC

- Created and maintained most of the dashboards used by the product team to track various performance metrics.
- Presented quarterly updates to stakeholders, demonstrating team contributions and data applications across departments.
- Proposed and cooperated with the front end team to implement A/B testing of page designs resulting in 15% increase in user engagement.
- Developed a google apps script to retrieve data from bigquery and add it to the materials generated for sales proposals completely removing manual labor from the process.
- Designed several looker dashboards to track and analyze customer churn helping the customer experience team improve retention by 19%.

Clutch.co

May 2019 - January 2022

Intern

Washington DC

- Verified quality of data and ensured timely creation and delivery of new content for the website.
- Used excel and google sheets formulas to reduce time spent to check data for profile quality issues by 70%.
