## CAREER OVERVIEW

---

Overall 7 years of experience as a Senior Data Analyst, skilled in transforming complex data into actionable insights using advanced analytics and visualization tools like Power BI, Tableau, and Qlik Sense. Experienced in data pipeline automation and data modeling with SQL and Python, leading to optimized business-driven strategies. Proven ability to develop predictive models and interactive dashboards, supporting effective decision-making and company growth. Committed to leveraging data expertise to drive innovative solutions and enhance operational efficiency in dynamic environments.

## TECHNICAL SKILLS

---

**Visualization Tools and Libraries:** Power BI, Tableau, Qlik Sense, Pandas, Numpy

**Database:** SQL Server, MySQL

**Scripting and Queries:** T-SQL, PowerShell

**Data Warehousing:** Star/Snowflake Schema, Indexing, Partitioning

**Performance Tuning:** Query Optimization, Execution Plans, Index Management

**Programming languages:** Python, SQL, M, DAX

**ETL Tool:** SSIS, Informatica

## PROFESSIONAL EXPERIENCE

---

### Capital One

Feb 2025 - Present

*Sr. Data Analyst*

*McLean, VA*

- Analyzed financial data to support decision-making in the banking and finance domain.
- Performed ETL on large datasets to support in-depth analysis and reporting.
- Built a 4TB data warehouse with star schema to enhance reporting efficiency.
- Automated recurring reports using SQL, Python, R and scripts to streamline workflows.
- Followed data governance rules to ensure secure and correct data use.
- Used data profiling tools to check data accuracy, completeness, and consistency.
- Used R and Python to run statistical tests and generate insights.
- Implemented indexing and backup plans, reducing incidents and downtime.
- Created predictive models to improve marketing targeting and boost sales.
- Created interactive dashboards in Power BI that enhanced decision-making by providing real-time insights
- Set up automated alerts and jobs to improve system responsiveness to critical events.
- Utilized Power BI gateway to keep dashboards and reports up to date with on premise data sources.
- Supported data warehouse design for storing clean, structured data.
- Collaborated with BI team to deliver automation solutions, boosting efficiency and reducing manual work.
- Contributed to all SDLC phases, ensuring successful delivery and improved software quality.
- Created interactive dashboards in Power BI/Tableau to visualize key metrics and performance.
- Tracked data flow across systems using data lineage tools.
- Created ETL and SLA dashboard, reducing issue resolution time by 30%.
- Conducted UAT of dashboards and SSIS workflows, ensuring functionality and accuracy before deployment
- Automated Power BI reports, cutting manual effort by 40% and boosting data refresh speed.
- Created scripts for automation, data cleaning, and modeling.
- Collaborated with cross-functional stakeholders to turn business challenges into data-driven insights.
- Explained data insights to non-technical teams using simple terms and visuals.
- Flagged data issues that could impact reporting or compliance.
- Reduced manual effort by 70% by automating business rules using DAX in Power BI data models.
- Supported ETL integration for internal systems, improved data reliability by 30%.
- Attended Agile meetings and worked in sprints with cross-team partners.
- Reduced visual load time by 35% through optimized visual layering, minimized slicers, and background images.
- Published Power BI reports with scheduled delivery to stakeholders via email and shared workspaces.

- Worked with financial products, processes, and rules to ensure correct data usage.
- Designed data models in Qlik Sense using a three-layer data architecture, which enhanced data organization and analysis
- Used profiling tools to scan datasets for quality issues.
- Helped in ETL and data warehouse tasks to organize and store clean data.
- Used Python and R for data analysis, trends, and forecasting.
- Designed and deployed 50+ interactive dashboards and reports using slicers, bookmarks, tooltips, and drill-throughs.
- Developed advanced set analysis formulas, improving the precision and depth of data insights.
- Used DAX in Power BI to create calculated measures and custom visuals.
- Created dashboards in Power BI and Tableau to track business metrics.
- Improved report performance by 40% by optimizing DAX queries using variables, filter context control, and performance analyzer.
- Supported data governance by helping set data rules and ownership roles.
- Monitored and reduced risks by improving data accuracy and controls.
- Built Tableau dashboards to track metrics and spot trends.
- Provided user support, training, and documentation to drive adoption and knowledge sharing.
- Built dashboards from scratch using Tableau, improving data visualization and decision-making processes.
- Aligned project goals by participating in requirement gathering and design review sessions, improving project accuracy.
- Created custom reports based on user requirements using SQL, improving data access and user experience.
- Participated in prototype meetings with clients, facilitating feedback and iterative improvements.
- Traced how data moved from source to report using lineage tools.
- Managed deployment sessions to ensure seamless system transitions and implementations.
- Resolved bugs using SQL and Pandas, enhancing data accuracy and system reliability.
- Optimized data models and queries, cutting dashboard load times by 60%.
- Helped teams make better decisions by turning raw data into clear visuals.

**Cassendro Software Solutions***Software Engineer***May 2016 - Apr 2021***India*

- Designed data models and customer sales dashboard for Beachbody, boosting sales analysis.
- Enhanced data organization for the designing team by creating well-structured star and snowflake schemas.
- Built an Excel prototype of a Tableau dashboard to ensure data quality and reliability.
- Migrated Qlikview dashboard to Tableau, which enhanced data visualization and user experience.
- Developed over 200+ complex DAX measures and calculated columns to meet dynamic reporting needs.
- Customized visuals using Power BI themes, conditional formatting, and custom tooltips to match brand identity.
- Maintained daily client engagement from the onshore team, ensuring consistent communication and project alignment.
- Monitored and maintained network performance, ensuring optimal service delivery and minimizing downtime.
- Analyzed network data and performance metrics, identifying and resolving issues to enhance network reliability.
- Ran checks to find missing, duplicate, or incorrect data.
- Built Power BI dashboards to track KPIs and trends, speeding up decisions by 30%.
- Prepared and presented reports on network performance and operational efficiency using Power BI, leading to informed decision-making and improved resource allocation.
- Enhanced financial and operational analytics by creating measures and columns with DAX expressions.
- Added bookmarks, drillthrough, and tooltips to enhance report navigation and data exploration.
- Trained end-users and team members on how to use and understand Power BI reports.
- Designed user-friendly Power BI dashboards to track KPIs and business trends.
- Optimized Tableau dashboards by tuning extracts and filters, cutting load times by 50%.

**EDUCATION**

---

**St. Francis College, Brooklyn NY, USA.***M.S., Information Technology Management*
