WORK EXPERIENCE

LTIMindtree

Chennai, TN

Analytics Engineer

Jan 2022 - May 2023

- Designed analysis-ready data models and KPIs to enable faster decisions across finance, strategy and product teams.
- Increased executive reporting confidence by improving data accuracy from 82% to 94% through data profiling, anomaly detection, and policy-level validation rules using DAX measures.
- Accelerated KPI analysis by 30% by transforming the core insurance database into a star dimensional model, making it easier for analysts and leadership to track loss ratios, retention, premiums, and claim severity.
- Automated monthly revenue and customer reporting using SQL and Python, saving 8+ hours weekly and giving stakeholders real-time visibility into portfolio performance.
- Conducted statistical analysis and A/B testing, translating results into Power BI dashboards that increased customer retention by 15% and reduced risk exposure by 10%.
- Developed reusable DAX frameworks for KPI standardization, improving metric consistency by 38% across 5+ dashboards and reducing reporting discrepancies.

Associate Engineer

Aug 2021 - Dec 2021

- Delivered business-critical insights through ad-hoc SQL reports and dashboards used by underwriting, claims, and customer servicing teams to support policy renewal and claims approvals.
- Resolved 40+ analytics and reporting issues, improving data availability for downstream analytics and reducing operational downtime by 25%.

INTERNSHIP EXPERIENCE

myRide

Boston, MA

Data Engineer Intern

Oct 2025 - Present

- Strengthened executive decision-making by building Tableau dashboards that analyzed ride patterns, driver performance, vehicle health metrics, and customer behavior using 1TB/day sensor & trip data.
- Improved operational KPI reliability by 40% by redesigning SQL logic, validating data sources, and ensuring accurate reporting for operations, product, and safety teams.
- Identified cost-saving opportunities in rider wait times and route anomalies by conducting SQL/Python analysis
- Ensured continuous analytics readiness by automating data quality checks and anomaly detection across critical sensor feeds, enabling real-time monitoring for cross-functional teams.

PROJECTS

Credit Card Purchase Analytics & Forecasting | *Power BI, Azure Data Lake*

[GitHub](#)

- Analyzed credit and transaction data in Azure Data Lake using Databricks to identify purchase patterns and key customer segments.
- Developed a predictive model using Random Forest with 90% accuracy to predict credit card purchases.
- Integrated model outputs into Power BI dashboards to visualize forecasts across 15+ key features.

Bank Marketing Prediction | *GCP, BigQuery, Airflow, Docker*

[GitHub](#)

- Identified key behavioral and demographic drivers of term deposit conversions, offering actionable market insights.
- Reduced ETL turnaround by 70% by redesigning BigQuery data flows, enabling real-time marketing insights and faster decision-making on campaign strategy.
- Designed performance tracking dashboards to monitor model uplift, response rate and customer engagement trends.

TECHNICAL SKILLS

Programming & Analytics : Advanced SQL, Python (Pandas, NumPy), Statistics, A/B Testing

Visualization & Reporting : Power BI(Power Query, Data Modeling), Tableau, Excel,

Data Platforms & Engineering: Airflow, DBT, Docker, Snowflake, BigQuery

Data & Cloud Platforms : Azure(ADF, Data Lake Gen 2), AWS (S3, RedShift), GCP (Cloud Storage, BigQuery)

Machine Learning: Predictive Modeling, Feature Engineering, Forecasting, Clustering[‘/

Developer Tools: Git version control, CI/CD (GitHub Actions, GitOps, Jenkins, ArgoCD)

EDUCATION

Northeastern University, Boston

Master of Science in Data Analytics Engineering

May 2025

GPA 3.95
