

SHIVA KUMAR CHINTA
DATA ANALYST

Email: shivakumarchinta719@gmail.com

Phone: (470) 930-8031

LinkedIn: www.linkedin.com/in/shiva-kumar-1b25a7214

PROFESSIONAL SUMMARY:

- Experienced **Data Analyst** with over **3 years** of proven experience in **data visualization, reporting, and data transformation** across **Healthcare, Retail, and E-commerce** domains.
- Proficient in building **interactive dashboards and reports** using **Power BI**, integrating structured and semi-structured data from platforms like **Azure Data Lake, Snowflake, and SQL Server**.
- Skilled in writing **complex SQL queries, stored procedures**, and performing **data validation** across multi-layered data environments including **staging, curated, and reporting** layers.
- Experienced in developing **ETL pipelines** using **Databricks, Azure Synapse, PySpark, and dbt** to process large-scale, domain-specific datasets.
- Hands-on expertise in **Python** libraries such as **Pandas, NumPy, seaborn, and matplotlib** for **data analysis, statistical modeling, and visual storytelling**.
- Worked with **healthcare-specific data standards** including **ICD-10, CPT, HL7**, and maintained **HIPAA compliance** in analytics workflows.
- Collaborated cross-functionally with **actuarial, clinical, logistics, and retail** teams to translate business requirements into impactful analytics solutions.
- Applied **NLP** and early-stage **GenAI tools** in pilot use cases to extract patient sentiment insights from unstructured healthcare data.
- Adept at using **Agile methodology**, managing tasks with **JIRA**, and contributing to sprint planning, backlog grooming, and daily stand-ups.
- Strong communicator with the ability to deliver data-driven insights to **non-technical stakeholders**, ensuring alignment between business goals and analytics initiatives.

TECHNICAL SKILLS:

Data Visualization & BI	Power BI, Power BI Dataflows, DAX, Tableau (basic)
Databases & Warehousing	SQL Server, Snowflake, SAP HANA, Azure Synapse, AWS Redshift
Data Engineering & ETL	SQL, dbt, Azure Data Factory, Databricks, PySpark
Programming & Analysis	Python, Pandas, NumPy, seaborn, matplotlib, Excel VBA
Project Management	Agile, Scrum, JIRA, Confluence
Version Control & CI/CD	Git, GitHub, Azure DevOps
APIs & Automation	REST APIs, Excel Macros, NLP, GenAI (pilot use cases)

PROFESSIONAL EXPERIENCE:

Client: Optum, Eden Prairie, Minnesota

Jan 2024 – Present

Role: Data analyst

Responsibilities:

- Developed advanced Power BI dashboards using data from Azure Data Lake and *Snowflake*, enabling clinical teams to explore healthcare costs and claims utilization for strategic intervention planning.
- Created real-time data pipelines with Azure Synapse and SQL to convert patient-centric requirements into interactive visualizations focused on chronic disease metrics and care outcomes.
- Designed automated data transformation workflows using *dbt* and Databricks notebooks to process patient claims, lab results, and provider data, significantly improving analytic turnaround time.
- Conducted root cause analysis on emergency department overuse using Python (Pandas, seaborn), delivering insights through visual narratives and reports to internal healthcare stakeholders.
- Engineered structured datasets from HL7 and EHR feeds using PySpark and Azure Data Factory, supporting payer and regulatory reporting across multiple U.S. regions.
- Partnered with actuarial teams to prepare, clean, and model high-volume claims data with Python and SQL, identifying at-risk populations for targeted clinical programs.
- Built and optimized SQL Server stored procedures and Power BI Dataflows to streamline data reconciliation between staging and curated layers, enhancing Medicare Advantage report accuracy.
- Collaborated in Agile teams and participated in code reviews using Git, deploying parameterized dashboards and pilot NLP models (GenAI) to extract insights from patient satisfaction feedback.

Environment: Power BI, Azure Synapse Analytics, Azure Data Lake, SQL Server, Python (Pandas, NumPy, Plotly, seaborn), PySpark, Databricks, dbt, Snowflake, REST APIs, Excel, JIRA, Confluence, Git, Agile, Healthcare Claims, HL7, ICD-10, CPT Codes, HIPAA Compliance

Client: Cognizant, Hyderabad, India

Nov 2021 – Dec 2022

Role: Data analyst

Responsibilities:

- Designed Power BI dashboards for retail performance monitoring, integrating data from *SAP HANA* and SQL Server to visualize sales, product return rates, and seasonal trends.
- Worked on complex SQL queries to calculate daily and weekly sell-through rates for various product categories and regions, enhancing visibility into underperforming SKUs.
- Built Python-based data validation scripts to ensure consistency in ETL pipelines feeding AWS Redshift data marts, minimizing anomalies in customer behavior reports.
- Partnered with supply chain teams to develop Tableau visualizations tracking stockout patterns and supplier fill rates, reducing lead time risks.
- Developed and scheduled SQL stored procedures to aggregate inventory snapshots and movement logs to support restocking strategy reports.
- Created Excel-based data models supported by SQL extracts for quick executive summary reports on marketing campaign performance across digital and in-store channels.
- Facilitated weekly data quality checks on promotional discount data integrated from multiple e-commerce platforms, reporting issues via JIRA and Git.
- Conducted root cause analysis of inventory shrinkage patterns using Python (matplotlib, seaborn) and cross-referenced it with transaction logs from *SAP BW* for actionable findings.

Environment: Power BI, Tableau, SQL Server, AWS Redshift, Python (Pandas, NumPy, matplotlib), Excel, REST APIs, JIRA, Git, Agile, Retail Sales Data, Inventory Management, SAP HANA, SAP BW, Product Lifecycle Data

Client: Ecom Express, Hyderabad, India

Oct 2020 – Mar 2021

Role: Data Specialist

Responsibilities:

- Built Power BI dashboards to track real-time parcel delivery performance across zones, incorporating SLA breach indicators and hub-level breakdowns for operational managers.
- Developed SQL-based reports for hub operations efficiency, using historical scan and transit logs to derive insights on delays and rerouting patterns.
- Used Python and Pandas to clean and preprocess delivery logs, reconciling mismatched entries between internal tracking systems and third-party courier updates.
- Supported demand forecasting by aggregating order and dispatch trends into Excel-based time series models, highlighting peak and off-peak patterns.
- Conducted weekly delivery SLA audits by matching scan timestamps to promised delivery windows, creating variance reports in Power BI.
- Maintained and enhanced Excel VBA tools for extracting and formatting logistics data from *SAP ERP* reports for local use by the hub-level operations team.
- Performed geospatial data cleanup and standardization to align address formats across systems, supporting better route optimization and heatmap generation.
- Created daily control reports for non-delivery reasons categorized by zone, delivery agent, and shipment type, helping supervisors manage escalations effectively.

Environment: Power BI, SQL Server, Python (Pandas, matplotlib), Excel, Excel VBA, REST APIs, Logistics Data, Parcel Tracking, Delivery SLAs, Geo Data, Last Mile Delivery, SAP ERP, Inventory and Order Management

EDUCATION:

Master of Science in Information Systems

Jan 2023 - Oct 2024

Trine University, Allen Park, MI

Bachelor of Technology in Computer Science & Engineering

June 2017 – Aug 2021

Jawaharlal Nehru Technological University, Kakinada, India
