PROFESSIONAL SUMMARY

Data Analyst with 3+ years of professional experience, specializing in data analysis with a background in information security. Experienced in Python automation, Tableau, and Power BI for dashboard development, data cleaning, and data wrangling. Proficient in statistical analysis, data visualization, and data mining techniques to extract actionable insights. Experienced in data governance principles, ensuring data quality, compliance, privacy, and security.

EDUCATION

Master's in computer information systems, University of Houston, Clear-Lake	2019 – 2021
Bachelor's in computer engineering, Gujarat University	2014 – 2018

SKILLS

Methodologies: Agile, Waterfall, SDLC

Programming Languages: Python, R, SQL, Scala

IDEs: Visual Studio Code, PyCharm, Jupyter notebook

Packages and Frameworks: NumPy, Pandas, Matplotlib, SciPy, ggplot2, Flask, Seaborn

Visualization Tools: Tableau, Power BI (DAX, Power Query), Microsoft Suite

Cloud Platforms: AWS (S3, Redshift), Azure, Google Cloud Platform

Databases: MySQL, PostgreSQL, MS SQL Server, Oracle

EXPERIENCE

Data Analyst II Metlife	Sept 2023 - Current <i>New York, NY</i>
-----------------------------------	--

- Implemented automated data processing using Cronjobs and SQL stored procedures, achieving a high job success rate and reducing manual efforts by 20%, enhancing business agility and decision-making capabilities.
- Created interactive dashboards in Tableau, visualizing complex datasets and enabling stakeholders to make data-driven decisions, resulting in a 20% increase in operational efficiency and a 15% reduction in reporting errors.
- Analyzed large datasets using Python pandas to identify customer retention trends, and actionable Tableau dashboards for real-time insights, facilitating clearer decision-making for senior leadership.
- Improved project outcomes by participating in project planning sessions, ensuing in a 20% surge in efficiency through enhanced analysis of business requirements and the proposal of more effective solutions.

Data Analyst I Deloitte	Sept 2021 – July 2023 <i>San Jose, CA</i>
-----------------------------------	--

- Developed Python automation to optimize processes within Google's FedRAMP team, enhancing team efficiency and reducing 3 weekly manual work hours.
- Optimized team efficiency by 10% by creating product dashboards using Google Cloud Platform, Python, SQL, and dashboarding tools like Tableau & Power BI.
- Automated ticket creation with Appscript and email alerts for vulnerability thresholds, using ETL patterns, frameworks, and query techniques, leading to rationalized data accuracy and faster decision-making for the client.
- Developed and maintained ETL pipelines using AWS Glue and Redshift Spectrum to integrate data from various sources, including S3 and on-premises databases, into a unified Redshift data warehouse for comprehensive analytics.
- Employed advanced data analysis methods to scrutinize customer feedback's large datasets, resulting in a notable 10% boost in product usability, thereby enriching user experience and bolstering customer retention metrics.
- Empowered senior management with data-driven insights by developing 7+ insightful reports and dashboards using Tableau, resulting in enhanced strategic decision-making in Product and Operations teams.

- Drove a 15% efficiency increase in project execution by leading comprehensive planning sessions, ensuring business requirement analysis, and proposing actionable solutions, thereby accelerating project timelines by 20%
- Ensured compliance with industry regulations (e.g., GDPR, CCPA) by implementing and monitoring data governance frameworks, resulting in improved adherence to legal standards and reduced risk of non-compliance.
- Managed data privacy protocols, including encryption and anonymization techniques, to safeguard sensitive information, ensuring alignment with data privacy laws and enhancing organizational trust and security practices.

Data Analyst

Cerebras Systems

June 2021 – Sept 2021

Sunnyvale, CA

- Conceptualized statistical analysis to polish the organization's integrity during onboarding and offboarding processes, leading to a 20% reduction in data errors and Strengthening decision-making for the IT team.
- Automated the integration of data from GIT, AWS, SLACK, Outlook, and NIST using Python and Pandas, reducing data processing time by 30% and improving data accuracy, leading to more informed business decisions.
- Implemented Python Pandas automation for efficient handling of dormant and bot accounts, resulting in a 3% cost saving and reduction in access to dormant accounts.

Product Analyst

Informatica

Sept 2020 – Apr 2021

Redwood City, CA

- Modernized software integrity assessment using API and Python automation, leading to a 20% improvement in response time and ensuring comprehensive data analysis for 50 products, 1500+ product versions, and 1000+ vulnerable components, enhancing overall product security.
- Monitored and analyzed Redshift cluster performance using AWS CloudWatch and performance metrics, identifying and resolving issues related to query execution and resource utilization to ensure optimal database performance.
- Established an efficient on-premises data warehouse for scan result analysis, using Python to develop and implement ETL processes, leading to a 20% increase in data-driven response time.
- Collaborated closely with cross-functional teams to address vulnerabilities identified in Black Duck scans, promptly generating JIRA tickets for efficient resolution and mitigation. Ensured timely action to minimize security risks and uphold data integrity.
- Upgraded decision-making by providing stakeholders with visually compelling representations of scan results through Tableau dashboards on MySQL database.

Cyber Security - Intern

Esecurify

June 2018 – April 2019

Ahmedabad, IN

- Learned OWASP top 10 security attacks in the first few months and performed those attacks on clients' projects to find vulnerabilities.
- Researched and analyzed known hacker methodologies, system exploits and vulnerabilities to support Red Team Assessment activities.
- Performed application security and penetration testing manually and with tools like burp suite.
- Shaped written detailing assessment findings and recommendations and worked on Network testing.
