WORK EXPERIENCE

Quality Assurance Analyst (Formerly QA Associate) Nov 2021 – Current
Mathematica Policy Research, NJ

- Develop and execute comprehensive test plans and test strategies to ensure the integrity and performance of data-driven applications and software solutions.
- Conduct manual and automated testing across diverse projects, identifying critical defects and optimizing system performance.
- Leverage Python, SQL, Selenium, and Postman to design and automate test cases, enhancing testing efficiency and reducing manual workload.
- Collaborate cross-functionally with developers, data analysts, and project managers to address software quality concerns, ensuring seamless integration and deployment.
- Perform post-release validation and regression testing, mitigating risks associated with software updates and releases.
- Utilize JIRA and Confluence to document test cases, track defects, and streamline the QA process for improved team collaboration.
- Proactively contribute to the improvement of QA workflows, implementing automation solutions that reduce testing time and enhance system accuracy.
- Support compliance with federal and state regulations in health policy research projects by ensuring data integrity and software reliability.
- Spearheaded troubleshooting efforts for complex issues, improving issue resolution time and minimizing downtime.
- Assist in the mentorship of junior QA team members, fostering a culture of knowledge sharing and continuous improvement.

ACADEMIC PROJECTS

Data Science Research Project (Python) Jan 2020 – May 2020

- Analyzed climate change at a location. Tested if it is related to global climate change, or to ENSO fluctuations
- Fitted a linear regression model to the data and overlaid it on the plots, so we were more easily able to visually examine the trend in the three time-series over time
- Correlation coefficients yielded us a numerical way to observe how strongly the correlations between the local temperature is affected by global temperature and Southern Oscillation Index
- Used computer modeling applications to help make long- and short-range weather predictions

EDUCATION

Stony Brook University Aug 2017 – May 2021
Bachelor of Science, Applied Mathematics and Statistics
