

Laawanyaa Sai Thota

Data Analyst

laawanyaa@mymailbox.net | (617) 798-0048 | USA | [LinkedIn](#) | [GitHub](#)

Summary

Results-oriented Data Analyst with over 3 years of experience leveraging advanced analytics, real-time data pipelines, and predictive modeling to deliver impactful insights in fintech, product analytics, and FMCG sectors. Expert in SQL and Python with proven ability to manage large-scale datasets, automate workflows, and collaborate with engineering, compliance, and analytics teams to meet business goals. Strong knowledge of cloud platforms (AWS, GCP, Azure), data visualization, anomaly detection, fraud analysis, and data quality governance. Adept at aligning data products with business KPIs, reducing risk, and increasing operational efficiency through scalable and accurate solutions.

Technical Skills

- Languages & Analytics:** Python (Pandas, NumPy, Regex, Statsmodels, datetime), R, SQL, PySpark
- Data Visualization:** Tableau, Power BI, Apache Superset, Looker Studio, Matplotlib, Seaborn, Plotly
- Databases & Warehousing:** Snowflake ([Snow Pro Core Certified](#)), Amazon Redshift, BigQuery, ClickHouse, Hive, PostgreSQL, MySQL
- Cloud Platforms:** AWS (Kinesis, Lambda, CloudWatch, Glue, S3), GCP (BigQuery, Looker, Compute Engine), Azure (Data Lake Gen2, Synapse)
- Streaming & Ingestion:** Apache Kafka, Flink, NiFi, Beam, AWS Kinesis
- Modeling & ETL:** dbt, Spark SQL, Apache Hudi, Apache Iceberg, Apache Beam
- Monitoring & Testing:** Grafana, Prometheus, Great Expectations, Hive schema checks, DataDog
- Statistical & Predictive Analysis:** Linear Regression, Time-Series Forecasting, Hypothesis Testing, Monte Carlo Simulations, A/B Testing
- Tools & Collaboration:** Jupyter Notebooks, Git, Jira, Confluence, Excel VBA, Google Analytics

Professional Experience

Data Analyst, Chime

10/2024 – Present | Remote, USA

- Engineered real-time dashboards for fraud analytics using Apache Superset and Power BI, enabling anomaly-based alerts and reducing fraud investigation cycle time by 70%. Led data governance efforts by implementing Great Expectations rules, achieving over 99.9% pipeline data integrity across ingestion and transformation stages.
- Built robust data pipelines in Spark SQL and dbt, feeding transactional and behavioral data into Snowflake and Redshift to support near real-time analytics and reporting. Collaborated with fraud, compliance, and data engineering teams to define KPI metrics and business logic for suspicious activity detection, increasing cross-team alignment by 60%.
- Developed rule-based fraud detection model in Python to flag suspicious merchant patterns, off-hour activity, and transaction bursts. Improved alert precision by 50% and significantly reduced false positives
- Automated lineage and observability using Grafana and AWS CloudWatch, integrating alert-based workflows to prevent failures and reduce downtime by 60%. Incorporated Apache Iceberg and Apache Hudi for streaming storage with time-travel and rollback capabilities, supporting regulatory compliance and traceability.
- Enhanced real-time pipelines with geolocation and merchant enrichment APIs, improving contextual insight into high-risk transaction clusters. Conducted root cause analysis on pipeline using Prometheus and SQL-based data validation rules, reducing downstream escalation by 40%.

Data Analyst, Accordion

04/2022 – 07/2023 | Hyderabad, India

- Partnered with CFOs, senior executives and supported merger & acquisition transactions worth \$989M+ by delivering data-driven financial due diligence, KPI analysis, and executive-ready insights across geographies and business lines for target and portfolio companies.
- Designed Power BI and Superset dashboards with interactive filters and real-time refresh to support performance insights and UX testing. Architected scalable ingestion flows using Apache Kafka, Flink, and NiFi, achieving sub-second latency SLA compliance.
- Engineered behavioral and transactional features using PySpark for churn and retention models, improving user segmentation precision by 30%.
- Created version-controlled schemas and layered models in dbt, increasing pipeline modularity and data warehouse maintainability. Collaborated with Azure engineers to reduce ETL latency by tuning I/O and distributed job configurations, improving reporting availability by 25%.
- Conducted advanced data profiling and schema evolution tracking, helping detect data drifts early in the pipeline. Used JIRA and Confluence to manage stakeholder requirements and maintain data product documentation across engineering and analytics units.
- Automated data health checks and dashboards to monitor business-critical ingestion metrics in real time, resulting in a 50% faster issue resolution.

Associate Data Analyst, Sedemac

07/2020 – 03/2022 | Pune, India

- Collaborated cross-functionally with sales, product and customer feedback teams, to analyze data and build dashboards in Power BI and Apache Superset to track operational metrics and improve decision-making by identifying key insights.
- Performed exploratory data analysis on customer feedback and sensor logs using Python and SQL, identifying anomalies and performance drops pinpointing the issue to the product team, leading to a 25% improvement in product satisfaction through targeted corrective actions
- Developed SQL-based KPI models for daily reporting and supported QA with test automation scripts using python. Participated in feature planning with data science and product teams to define reporting logic and event taxonomies.
- Delivered detailed technical documentation and workflow diagrams to support pipeline onboarding and knowledge transfer. Validated data using Great Expectations and ad-hoc Superset queries, ensuring daily data delivery met SLA.

Education

Northeastern University

Master of Science in Data Analytics Engineering

Boston, MA, USA

09/2023 – 05/2025
