

PROFESSIONAL SUMMARY

Highly Motivated Software Developer with 4 years of Java full stack developer proficient in developing enterprise applications using Java and J2EE technologies. Skilled in Spring framework modules including MVC, IoC, AOP, Security, Data, and Boot. Proficient in deploying applications on AWS, managing EC2, S3, ELB, Auto-Scaling, IAM, DynamoDB, and VPC. Familiar with application servers like WebSphere, WebLogic, JBoss, and Tomcat, with expertise in SOA and AOP design patterns.

TECHNICAL SKILLS

- **Languages:** Java 8, PL/SQL, SQL, C++
- **Java/J2EE Technologies:** Core Java, Java Beans, Java Multithreading, Generics and Collections, EJB, tiles.
- **Web Technologies:** HTML5, JSON, CSS3, JavaScript, AJAX, Angular.js, Node.JS, React.JS, REDUX, React Native, Kafka, Kubernetes, Micro services
- **Web Frameworks:** Spring, Spring Boot, Hibernate
- **Design & GUI Tools:** Eclipse, IBM RAD
- **Databases/Tools:** Oracle, SQL Server, MySQL
- **Methodologies:** Agile, Waterfall

WORK EXPERIENCE:

Option Care| Back-end Engineer| Illinois

Jan 2023 – Aug 2023

- Proficiently designed, implemented, and managed real-time data streaming solutions using Apache Kafka, resulting in a 30% reduction in infrastructure costs through optimized cluster configurations and resource utilization.
- Spearheaded the implementation of OAuth authentication and authorization protocols for securing web applications and APIs, reducing authentication overhead by 20% and enhancing overall system security.
- Integrated OAuth 2.0 and OAuth 1.0a across multiple projects, streamlining user authentication and authorization processes, leading to a 25% decrease in development time for authentication-related tasks.
- Demonstrated expertise in setting up and managing Kubernetes clusters on AWS, Google Cloud, and Azure, implementing cost-effective strategies such as spot instances and reserved capacity, resulting in 40% cost savings compared to traditional deployment methods.
- Designed and implemented effective NoSQL data models to meet application requirements.
- configured and managed Nginx Controller for load balancing, traffic routing, and SSL termination.
- Solid understanding of SQL syntax and database concepts.
- Implemented Redux for state management in web applications to ensure a predictable and scalable state container.
- Ability to develop test and document software code using various technologies and test automation frameworks including Java, Spring, Spring Boot, Spring MVC, Hibernate, JDBC, Junit, Kafka, Tomcat, etc.
- Followed Spring Boot MVC REST framework to develop the application flow for the project. Developed views and controllers for client and manager modules using Spring MVC and Spring Core.
- Implemented Spring Boot microservices to process the messages into the Kafka cluster setup.
- Utilized Wave Java to design and implement parallel algorithms, optimizing performance for multi-core architectures.
- worked in MongoDB database design, implementation, and management.
- Implemented and maintained relational databases using PostgreSQL, ensuring efficient data storage and retrieval for Java applications.
- worked with functional interfaces and understanding their role in enabling lambda expressions.
- Led the setup of Kafka clusters and optimized configurations for high-throughput data processing, achieving a 50% reduction in processing time by leveraging efficient partitioning and replication strategies.
- Expertise in creating and deploying Docker containers to Kubernetes pods, enhancing application distribution efficiency by 30% and reducing deployment time from hours to minutes.
- Implemented Kubernetes RBAC for fine-grained access controls, enhancing cluster security and compliance standards while reducing administrative overhead by 15%.
- Engineered Kafka producers and consumers, enabling seamless data ingestion and consumption across diverse applications, resulting in 20% faster data processing and improved overall system responsiveness.

Client: Amazon | Java Developer | Hyderabad, TS**May 2020 - July 2021**

- Led all phases of the SDLC, from requirements collection to application development and customization, implementing agile methodologies resulting in 20% faster time-to-market for key features and enhancements.
- Developed and maintained dynamic user interfaces using Angular, enhancing user experience and reducing front-end development time by 15% through reusable components and streamlined workflows.
- Developed dynamic and responsive web applications using Angular framework.
- Implemented Angular components, services, and directives for seamless user experiences.
- Designed and built Single Page Applications (SPAs) with Angular, providing smooth and efficient user interactions
- Leveraged Hibernate to extract and bind data from databases to Java objects, optimizing data retrieval processes and reducing query execution time by 25% through efficient mapping and caching strategies.
- Designed and developed responsive web forms using HTML5, CSS3, JavaScript implementing advanced features such as sorting, pagination, and real-time rendering, resulting in 30% faster UI rendering and improved user interaction.
- Developed web services using Microservices to connect the backend database and the application has a single function to verify the data.
- Used Postman to interact with API endpoints of the Microservices.
- Implemented microservices-based architecture using Spring Boot interacting through REST API.
- Utilized Spring framework for dependency injection, transaction management, and concerns separation, reducing development overhead and enhancing code maintainability by 20%.
- Implemented and maintained configuration of Spring Application Framework, ensuring scalability and performance optimization, contributing to 15% reduction in resource consumption.
- Defined XML documents and schemas for web services, ensuring data consistency and validation, reducing errors and enhancing inter operability between systems.
- Implemented JMS for asynchronous exchange of information among J2EE components, improving system reliability and scalability while reducing processing bottlenecks by 40%.
- Employed Docker for building and managing Docker images and containers, optimizing storage usage and deployment processes, resulting in 20% reduction in deployment time and cost savings on infrastructure resources.
- Expertise in performing data manipulation tasks using SQL, including INSERT, UPDATE, DELETE operations.
- Worked on AWS cloud services like EC2, S3, RDS, ELB, and EBS for scalable and reliable application hosting, implementing auto-scaling strategies and optimizing resource utilization, leading to 30% reduction in operational costs.
- Experienced Java developer with a focus on WebSphere Commerce.

Client: Wipro | Java Developer | Hyderabad, TS**June 2018- May 2020**

- Conducted workshops and training sessions to educate the development team on GraphQL best practices and usage.
- Optimized Java code for performance improvements, demonstrated understanding of time and space complexity in code.
- Used Java standard libraries for common tasks, familiarity with Java APIs for file handling, networking, and data manipulation.
- Implemented an application using wiremock framework for writing Json request and response.
- Utilized Spring Boot and Micro-service architecture with RESTful APIs for efficient data retrieval and communication between client-side and server-side components, reducing network latency and improving overall system responsiveness by 35%.
- Proficient in working with different versions of Angular, including Angular 2/4/6/8/10/12, staying up-to-date with the latest features and best practices.
- Implemented state management in Angular applications using NgRx, ensuring efficient handling of application state and data flow.
- Maintained clear and comprehensive documentation for Angular projects, aiding in onboarding and knowledge transfer within the team
- Played a key role in setting up AWS services, optimizing EC2 instances and S3 buckets for cost efficiency, and deploying applications with faster data rendering capabilities, contributing to 15% reduction in operational costs and 30% faster UI rendering.
- Initiated automated CI/CD pipelines using AWS code-pipeline, AWS code-Build, AWS code-deploy.
- Experience in working AWS S3 for data ingestion into snowflake.

- Coordinating the source target teams, dev teams or admin teams for any data issues or outages.

EDUCATION

University of New England , Oct 2022

GPA: 3.8

Master's in Computer and Information Systems

Coursework: Cloud computing concepts, Java programming with PHP and MySQL, advanced network communications , graduate and professional skill, development, IT project management, information security, network communications, python programming, Machine learning, database systems
