

Summary:

- Overall 3+ years of experience in Software development, working in **Microsoft Graph API, Office 365, SQL and Reporting tools**.
- Experience working with customers to resolve complex issues by collaborating with Microsoft product teams.
- Exposure in **Power BI** to analyze and visualize the data, creating interactive reports and help business with data points in decision making.
- Experience working on reports using **Power Query** and **SQL**.
- Strong experience in data analysis and Proficient in writing **SQL queries** and **stored procedures**.
- Exposure to **Power Automate** to create flows and process automations integrating with **Dataverse** and other Microsoft 365 services.
- Experience with all phases of the Software Development Life Cycle, including system analysis, design, coding, testing, and documentation in both **Agile Scrum** and **Waterfall** project development teams.
- Experience working with **Microsoft SQL Server** and **T-SQL**.
- Good understanding of **OLTP** and **OLAP** data models and **Azure Data fundamentals**.
- Exposure to Data analytics in **Databricks**.
- Exposure to **Microsoft Fabrics** concepts.

Software Skill Set:

Programming Languages	Python (NumPy)
Microsoft Technologies	Graph API, Office Object Model, Azure, .Net Framework
Low code Platform	Microsoft Power Platform (Power Automate, Dataverse)
Web Services	SOAP, RESTful services
BI & Reporting	Power BI, SSRS
Tools & Platform	Postman, Visual Studio, Azure Portal, O365 Admin center, JIRA, Confluence, GitHub, Databricks
SQL	T-SQL and Stored Procedures
Databases	SQL Server

Projects

- **SQL Data Warehouse Project:** Built a modern data warehouse and analytics solution using SQL server [SQL, Stored procedures]. This warehouse project is built using Medallion Architecture Bronze, Silver, and Gold layers.
GitHub: <https://github.com/nikitha-learning98/sql-data-warehouse-project>
- **Power BI Reporting:** This Power BI project investigates why customers are leaving a telecom company by identifying the specific reasons behind customer churn. Using a dataset, I built an interactive report that uses DAX formulas to track trends and highlight high-risk groups. The final report helps the company understand customer behavior so they can take action to improve loyalty and reduce churn.
GitHub: <https://github.com/nikitha-learning98/PowerBIReports>
- **Data Analytics Using Databricks:** This project demonstrates a comprehensive data analytics workflow within the Databricks ecosystem. I transformed raw CSV datasets into actionable business insights by leveraging Unity Catalog for data governance, Databricks SQL for deep-dive analysis, and integrated Dashboards for data storytelling. I have also created "Genie Space," allowing non-technical stakeholders to chat directly with the data to gain insights.

Work Experience

Developer Support Engineer (Graph Team)

Organization: **Microsoft Corporation**
Bengaluru, India

(August 2021 – July 2022)

Responsibilities:

- Assisted developers in designing and implementing integrations with Microsoft 365 services (Outlook, Teams, SharePoint, OneDrive) using **Graph API**.
- Provided technical support and troubleshooting for Microsoft Graph API, resolving issues with authentication, permissions, REST queries, and SDK usage.
- Experience in **API integration**, collaborating with product teams.
- Guided customers on best practices for secure and scalable Graph API usage, including **OAuth 2.0** flows and **Azure AD** app registrations.
- Provide solutions, workarounds and collaboration with Microsoft Engineering teams to resolve complex issues.
- Collaborates on cross-team and cross-product technical issues by working with resources from other groups as needed to resolve moderately complex customer issues.

Environment: SQL Server, Azure Active Directory, Microsoft 365 tenant, OAuth 2.0 authentication flows, Microsoft Graph API (REST endpoints, SDKs in Python/JS/C#), Visual Studio Code, Postman/Graph Explorer, Azure Portal.

Analyst I

Organization: **Capgemini**
Hyderabad, India

(July 2019 – July 2021)

Responsibilities:

- Participate in application data design, architecture discussions, and database performance reviews.
- Delivered automated reporting solutions using **Power BI** that reduced manual reporting time and provided actionable insights to business teams.
- Used **SSMS** to connect to the **SQL Server** and experience writing queries for **data analysis** and **reporting**.
- Experience using **JOINS**, **Indexes**, **CTEs** and **Sub-queries** when building queries.
- **Normalized** the reports to remove redundancy.
- Designed **Power Automate** flows to automate repetitive tasks and scheduled activities, and we integrated with **Azure**, M365 services.
- Working experience in Office Extensibility domain using **VSTO**, **VBA** and **COM** add-ins.

Environment: Power BI, SQL, SQL Server, Power Automate, Azure, Office 365, SSRS.

Education:

- **Bachelor of Technology** in Electronics and Communications Engineering from JNTU in April 2019.

Certifications:

- **Microsoft Certified:** Azure Data Fundamentals (**DP-900**).
- **Microsoft Certified:** Azure Fundamentals (**AZ-900**).
