Education

Florida State University

Bachelor of Science in Cyber Criminology/Computer Science

May 2020 - December 2024

Tallahassee, Florida

Relevant Coursework

- Data Structures and Algorithms II
- Comp. and Network Sys. Admin.
- Full-Stack Development with C#
- Digital Forensics and Cyber Crime Detection
- Computer Security Fundamentals
- Data Analysis with Python

Experience

CajCode LLC.

May 2024 – December 2024

Software Development Intern

Tallahassee, FL - Remote

- Contributed to the design and development of an iOS application using Swift, enhancing user experience and application functionality.
- Collaborated with the development team to identify and resolve bugs, improving code quality and application stability.
- Assisted in the development of FratSwipe, an iOS application designed to streamline the fraternity rush process by implementing UI features for member management and potential new member sections.

Projects

Terminal Based Projects | C++, Visual Studio Code

January 2024 - May 2024

- Developed terminal-based applications including a chess game, recipe book, and simulator, implementing C++ principles such as inheritance and dynamic memory management
- Applied data structures, algorithms, and object-oriented programming concepts to build robust solutions in C++

Full-Stack Online Marketplace | C#, .NET, MAUI, XAML, SQL, Visual Studio Code

May 2024 - Present

- Developed a comprehensive online marketplace inspired by Amazon, providing users with a seamless shopping experience. The project involves both front-end and back-end development as well as database integration to create a functional e-commerce platform.

ApplyFlow | HTML, CSS, JavaScript, React.js, Node.js, Visual Studio Code

September 2024 - Present

- Led the development of ApplyFlow, a cross-platform job tracking app with frontend in React.js and backend in Node.js, providing seamless user experience and OAuth authentication with Gmail, Outlook, etc.
- Designed the UI for tracking applications and statuses dynamically, with note-taking and multi-provider email integration.

ETL and Data Engineering Pipelines with PySpark | Python, Spark, SQL, VS Code

November 2024 - Present

- Designed and implemented multiple end-to-end ETL pipelines using PySpark to process, analyze, and transform large datasets for business insights and reporting.
- Developed pipelines for various use cases, including:
 - * Electric Vehicle Charging Analysis: Calculated metrics like maximum and average plugin durations per charge point and saved results in optimized Parquet format.
 - * Department Performance Analysis: Processed raw data to calculate total hours worked, average satisfaction scores, and total tasks completed for each department.
 - * Customer Spending Analysis: Utilized PySpark and Spark SQL to calculate customer spending, join datasets, and categorize customers into spending tiers using CASE statements.
 - * Sales Performance Analysis: Aggregated sales data to calculate store-level performance metrics and automated the output to CSV/Parquet formats.
 - * Sports Data Pipeline (In Progress): Developing an end-to-end ETL pipeline using PySpark to process and analyze sports data. Focused on aggregating player and team statistics, calculating performance metrics, and optimizing data output to Parquet/CSV formats for reporting and visualization.
- Automated data cleaning, schema validation, and transformation workflows to ensure scalability for large datasets.
- Followed modular ETL design principles (extract, transform, load) to create reusable and maintainable pipelines.

Technical Skills

Languages: C++, C#, Python, Swift, JavaScript

Developer Tools: VS Code, Xcode, PyCharm

Technologies/Frameworks: SQL, Apache Spark, Pandas, Linux, Unix, macOS, HTML, CSS, Node.js, React.js, Express, Git, .NET, .NET MAUI,
