

Bhargav Mahajan +1-2012087115 bhargavmahajanwork@gmail.com

Skills

Python (SciKit-Learn, Keras, Matplotlib, Numpy, Pandas, Tensorflow, Scipy, Pytorch), C, C++, C#, MySQL, MS Excel, Google colab, AWS, Apache Spark, Microsoft PowerBI, Cassandra, OpenCV, TextBlob, Seaborn, BeautifulSoup, Selenium, Requests, Newspaper3k, Bash.

Experience

Jan 2022 - Dec 2022

Edutech Learning Solutions Pvt. Ltd. , Vadodara, India - *Software Engineer*

- Designed and developed a **vehicle speed detection** system using **opencv** and state of the art deep learning algorithms.
- Designed and developed a **face recognition** system using state-of-the-art **deep learning** algorithms.

July 2021 - Dec 2021

Atyati Technologies Pvt. Ltd. , Bengaluru, India - *Software engineer intern*

- Solved day-to-day bugs in a **500K+ LOC** code base. In **C#**.
- **Refactored code** in a **500k+ LOC** code base.
- Wrote **Automation scripts** for automating routine deployment tasks (**CI/CD routines**).

Education

Jan 2023 - Dec 2024

Stevens Institute of Technology , Hoboken, New jersey - *MS in Data Science*

Coursework - Applied Machine Learning, Big Data Technologies, Data Acquisition Modeling and Analysis: Deep Learning, Pattern Recognition, Optimization for Data Science, Foundational Mathematics for Data Science, Introduction to Probability Theory.

Aug 2017 - Dec 2021

Birla Institute of technology and Science, Pilani. - B.Tech in Computer Science

Coursework - Data structures and Algorithms, Design and Analysis of algorithms, Computer Architecture, Computer Networks, Operating Systems, Computer Programming.

Data Science Projects

- **Facial Keypoints Detection**
Task - Detecting facial keypoints in face images - **Dataset of 7000 images**
Algorithm used - **Data augmentation** for images - **Resnet** with some additional layers
Result - **95.92% accuracy**

- **Image Classification using CNNs**
Implemented **AlexNet**, **GoogleNet** and **VGGnet** on the **CIFAR-10** Dataset with **60,000 images** for image classification and achieved **74%, 89% and 88%** accuracy for the nets respectively.
- **Image Classification using RDML, Inception, Vision Transformer and Resnet**
Implemented **Transformers**, **Inception**, **VIT** and **Resnet** for image classification on the **MNIST dataset** with **60000 training images** and **10000 test images**. Got an accuracy of **97.5%, 98.24%, 98.35% and 97.43%** respectively.
- **The correlation between news sentiment and stock performance**
Collected news headlines using **web scraping**, used sentiment analysis on headlines to extract sentiments, Used **SVM**, **Naive Bayes** and **Random forest** for computing correlation between news sentiment and stock performance achieving an accuracy of **77.78%**.
- **Statistical Analysis of water quality and potability**
Conducted Statistical analysis of water potability and determined the features which affect the potability of water the most out of 10 total features.
