EXPERIENCE

SAP ABAP Consultant

WestRock Legacy AMS Support, Richmond, VA

January 2023 – July 2024

- Provided clients with consultation to improve user systems and enhance capabilities.
- Developed interactive and ALV reports in ABAP systems to meet client's requirements.
- Fulfilled daily activities through task assignment and incident handling.
- Worked in a team environment to bring new ideas and solutions to improve stakeholder value.
- Debugged reports in MM and SD modules to analyze and correct program errors.
- Determined business needs via consultation, business analysis, and targeted observations.
- Developed and configured customized SAP solutions across MM and SD modules.
- Understanding of integration points with other SAP modules like FI (financial accounting) and PP (production planning).
- Wrote scripts and programs to create user-friendly interfaces and enhanced functionalities.
- Deployed SAP solutions and ensured smooth system integration.
- Involvement in SAP SD implementation or enhancement projects, including gathering requirements, configuration, testing, and go-live support.
- Troubleshooted and resolved issues to optimize performance.
- Provided SAP system support and end-user training.
- Performed rigorous documentation in SAP MM and SD modules processes and present progress reports.
- Ensured compliance with industry regulations.
- Keep abreast of the latest SAP offerings, updates, and developments.

SAP Consultant

Cognizant Technology Solutions LLC, Irving, TX

June 2022 – July 2024

- Built knowledge on multiple software programs to benefit client's projects.

- Collaborated with various associates to meet project milestones and requirements.
- Developed ABAP programming skills on SAP platform.
- Worked with popular helpdesk management tools (e.g., ServiceNow, Zendesk, JIRA) for ticket management, tracking, and reporting.
- Regularly assisted end-users with technical problems, ranging from simple queries to complex technical challenges.
- Troubleshoot a wide range of technical issues, including network connectivity problems, software malfunctions, operating system errors, and hardware failures.
- Collaborated with senior technical support staff or other departments to escalate complex issues or seek additional resources for resolution.
- Developed solid understanding of networking concepts, including TCP/IP, DNS, DHCP, and VPN configurations, which aids in diagnosing network-related issues
- Utilized various diagnostic tools and methodologies to identify root causes and apply solutions that restore system functionality.
- Supported system upgrades and patch management, ensuring that systems remain secure and up-to-date.
- Configured and maintained hardware and software environments, including installing new devices, setting up operating systems, and updating software applications.
