## EDUCATION AND CERTIFICATIONS

Bachelor of Science: Computer Science

Xavier University of Louisiana, 2023

Graduate-level coursework, University of Central Florida:

- Design & Analysis of Algorithms; Computer Forensics I: Seizure & Examination

Google Cybersecurity Professional Certificate

2025

## SKILLS AND TECHNOLOGIES

Languages: Java, Python, C++, SQL, PostgreSQL, JavaScript/Typescript, R, Bash

Frameworks: Spring Boot, JUnit, Node.js, Express.js, React.js, Git, FastAPI, Redis, REST APIs

Platforms: Linux, AWS (Lambda, EC2), Azure, Docker, Kubernetes

Other: Agile/SCRUM, TDD, Siemens' Capital, SIEM tools, JIRA, Wireshark

## EXPERIENCE

**Company:** Piper Aircraft

September 2023 – June 2024

**Title:** Engineering Intern – Avionics/Electrical

- Built Python simulations with NumPy, SciPy, TensorFlow to exponentially reduce flight simulation runtime, improving flight-qualification testing efficiency and accelerating aircraft qualification workflows.
- Developed Java plug-ins in Siemens Capital to automate avionics/electrical workflows, reducing manual engineering effort and integration errors
- Supported avionics and electrical validation by loading and testing Garmin flight software, directly contributing to a new aircraft product release.

**Company:** Nordstrom

June 2022 – August 2022

**Title:** Software Engineer Intern

- Implemented JUnit unit/integration tests for Java Spring Boot microservices, achieving 90%+ code coverage and ensuring robust enterprise-grade deployments.
- Worked in an Agile-SCRUM team, applying TDD in a CI/CD pipeline with Docker, Kubernetes, and AWS Lambda for cloud-native deployment.

**Company:** Xavier University of Louisiana

May 2023 – August 2023

**Title:** Research Student

- Developed R pipelines for regression/decision tree analysis to visualize large-scale data and identify actionable research insights.

## PROJECTS

**Project:** Incident Response dashboard

**Source:** <https://github.com/DanielsRT/boron-incident-response>

- Developed a full-stack Python + React tool querying security events via Azure APIs to enable security alert generation and management.
- Integrated Logstash, Elasticsearch, and Kibana (ELK stack) for data management and incident visualization, demonstrating SIEM and security analysis workflows.

**Project:** 3D Graphics Engine

**Source:** <https://github.com/DanielsRT/GraphicsEngine3D>

- Developed a C++ application for loading, modeling, and rendering 3D graphics. This engine demonstrates how 3D coordinates are projected into 2D space using a customizable projection matrix.

**Project:** Online Library System

**Source:** <https://github.com/DanielsRT/OnlineLibrarySystem>

- Developed a full-stack web app (Node.js, Express.js, React, MySQL) with authentication and REST APIs for library management.
