Contact: +1 469-468-6561

Masters in computer science
University of Central Missouri

Total Experience: Around 4 Yrs.

- Actively seeking opportunities to expand technical skills and knowledge in SQL Server, ASP.NET MVC, and .NET Core.
- Proficient in C# programming language with expertise in SQL, including stored procedures, functions, and database joins.
- Active participant in team discussions, sprint planning, and grooming sessions, adhering to Agile methodologies and daily scrum calls.
- Demonstrated ability to collaborate with offshore teams, ensuring effective communication and project alignment.
- Valuable experience as QA support during testing, deployment, and production monitoring, ensuring smooth transitions.
- Foundational knowledge of React.js and SSIS packages, with a proven aptitude for quickly adapting to new technologies.
- Proficient in versioning tools such as GitHub, Bitbucket, and TFS for effective code management.
- Collaborative team player, with a track record of seamless coordination with development, QA, and Production Support teams.
- Active contributor in code review calls and application design discussions, consistently improving application efficiency.
- Strong background in relational databases, object-oriented application design, development, testing, and deployment.
- Committed to delivering top-tier performance and making meaningful contributions to every project undertaken.
- Proficient in Agile methodologies, actively participating in daily scrum calls, sprint planning, and grooming sessions to ensure project progress and alignment with team goals.
- Valuable experience in production support, serving as the go-to resource for troubleshooting and resolving issues within tight timelines, maintaining a 2-day SLA, and facilitating smooth production deployments.
- Demonstrated skills in React.js, contributing to UI development and web page design, and collaborating with the UX team to enhance the end-user experience.
- Proven ability to adapt quickly to new technologies and tools, such as React.js and SSIS packages, to meet project requirements and drive innovation.
- Highly collaborative team player, fostering open communication and knowledge sharing among cross-functional teams, including development, Quality Assurance, and Production Support.
- Active participation in code review calls and application design discussions, consistently seeking opportunities to enhance application efficiency and quality.
- Committed to delivering top-tier performance, consistently contributing to project success, and driving continuous improvement through collaboration and innovative problem-solving.

- Dedicated to making meaningful contributions to every project undertaken, with a strong emphasis on teamwork and achieving common goals

Academic Qualifications:

- Masters in Computer Science at University of Central Missouri, 2021
Jan 2020 – May 2021
Current GPA: 3.6
- Bachelors in Electronics and Communication Engineering, 2018
June 2014- May 2018
Percentage: 79%

Tools and Technologies:

- Tools: Visual studio 2017, SQL Server Management Studio 2017, Octopus Deploy, Git Hub, TFS, BizTalk 2016, Bitbucket, Bamboo, JIRA, Splunk, visual studio 2019, DB2
- Technologies : .NET Framework- .NET corê, ASP.NET, ASP.NET MVC
- Analytical Tools: SAS'9
- Programming Languages: C, C++, C#
- Database: SQL (Stored procedures, Functions, CRUD operations, SQL Joins, Subqueries)

Professional Experience:

Home Depot, Atlanta, GA Developer, ONLINE Team

Dec 2022 - Present

- Working on .NET MVC technology for a retail client
- Working with agile methodology as a software developer in team
- Performing testing and developing the application enhancements and building the React applications for the new internal tools to manage the pricing and Inventory.
- Migrating the applications from mainframe legacy applications to .NET core
- Actively participating in the scrum calls, stand up meetings, sprint planning, backlog grooming sessions and sprint review, integration planning discussions
- Analysing application, debugging, implementing the processes as per business need and unit testing
- Working with the various tools for API testing with Swagger, deployment on the tfs
- Collaborate closely with development, Quality Assurance and Operation teams

- Debugging
- Worked as Primary Production support for every alternate sprint to tackle all the incoming issues and resolving in 2-day SLA while testing the applications and working with them till the Prod deployment
- Working on JIRA for the sprint planning
- Collaborating with team for taking up additional production issues
- Developed the skills on the React and other UI technologies while working on coding the UI and web page design
- Collaborated with the UX team to come up with the UI designing and suggesting various ways to ease the end user on handling the UI page.
- Analysing the issues that might come up and advising in the development Architecture design calls within team and looking through the existing applications to have the background knowledge
- Participating in the Business requirement calls and companywide sales calls to understand the business requirements and goals in a better way.
- Fostered a collaborative team environment by actively participating in scrum calls, stand-up meetings, and sprint planning sessions.
- Promoted knowledge sharing and cross-functional collaboration by assisting team members with technical challenges.
- Contributed to team cohesion by playing a key role in resolving production issues within tight timelines.
- Facilitated effective communication within the team, ensuring everyone was aligned with project goals and priorities.
- Encouraged innovation and continuous improvement by suggesting process enhancements and sharing best practices.
- Demonstrated strong teamwork by collaborating with UX teams to optimize user interfaces for improved usability.

Infosys LTD, Texas
Systems Engineer

Oct 2021-Nov 2022

- Working on .NET core technology for a banking client.
- Working with agile methodology as a software developer in team
- Performing testing and developing the orchestrator, transaction applications
- Migrating the applications from mainframe legacy applications to .NET core
- Actively participating in the scrum calls, stand up meetings, sprint planning, backlog grooming sessions and sprint refinement, integration planning discussions
- Analysing application, debugging, implementing the processes as per business need and unit testing
- Working with the various tools bit bucket and bamboo and Octopus Deploy

- Fixing the Code coverage with SonarQube
- Worked on creating Unit test cases for the code changes implemented
- Collaborate closely with development, Quality Assurance and Operation teams
- Debugging
- Worked as QA support while testing the applications and working with them till the Prod deployment
- Working on JIRA for the sprint planning
- Working on Toad for the backend development and for retrieving data
- Working on PCF for Cloud deployment
- Collaborating with team for taking up additional production issues
- Following the coding standards and resolving the SonarQube issues on code coverage like avoiding duplicate lines of code, creating test cases covering the 80% of the code changes.
- Actively participated in agile development ceremonies, fostering a sense of shared ownership and accountability within the team.
- Supported a culture of continuous learning and improvement by conducting knowledge-sharing sessions with team members.
- Collaborated with cross-functional teams to troubleshoot and resolve complex technical issues, strengthening team bonds.
- Championed quality assurance practices within the team, ensuring the delivery of high-quality software.
- Encouraged open communication and idea sharing, leading to innovative solutions and process improvements.
- Promoted a positive and inclusive team atmosphere by valuing diverse perspectives and contributions.

CVS, Arizona
Application Developer

May 2021- Oct 2021

- Working on applications for various plan with ASP.NET framework.
- Performing CRUD operations, modifying Stored Procedures and Tables on DB scripts.
- Working on the Joins, subqueries in the Stored procedures and Functions.
- Working on SSIS packages, actively monitoring and supporting the QA team for testing.
- Working on Octopus Deploy for deployment.
- Implementing data validations in stored procedures.
- Collaborating with the team in scrum calls.
- Working on Agile Methodologies with sprint of 2 weeks in a team of 4.
- Participating in the calls with Product owners to determine the project requirements and priorities.
- Implemented validation level file processor for a plan which has specific File type.

- Implemented a stored procedure for Updating, Inserting, deleting the bad data from the input file and loading into the tables.
- Performing the validations on the input file data and updating records on to the QNXT database.
- Altering and modifying QA database inserting the data to check the performance of the stored procedures and execution time taken
- Worked with team and product owners to meet the business requirements with the sprint deadlines
- Assisting the team in testing all the possible scenarios based on the User Story.
- Learning the Application level processes through continuous knowledge Transfer.
- Implementing the File loader, Rules processor for validating the enrolment keys, Member Attributes, other tables and Qnxt updater for updating the FTables and UTables by creating the job Tasks upon the plan requirement.
- Contributed to a cohesive team environment by actively participating in scrum meetings and collaborating with colleagues to address challenges.
- Played a key role in knowledge transfer within the team, facilitating a better understanding of application processes.
- Demonstrated a commitment to quality by working closely with QA teams to ensure thorough testing and bug resolution.
- Fostered collaboration with Product Owners, ensuring clear communication of project requirements and priorities.
- Encouraged a culture of accountability and responsibility within the team, enhancing project delivery.
- Supported team members in achieving their goals and promoted a sense of shared achievement.

**Welkin Technologies,
Charlotte, North Carolina
DotNet Intern**

Jan 2021- May 2021

- Training in the OOPS concepts in programming language.
- Worked on the tasks and assignments in the team.
- Involved in the complete life cycle including analysis, design, development.
- Performed Sanity testing and Regression testing with development team and QA team.
- Worked closely with team to establish the problem specifications and system designs.
- Applied OOP's concepts while working on assignments.
- Involved in the code review process and testing the application.
- Actively engaged in team tasks and assignments, contributing to a collaborative learning environment.
- Collaborated with peers to tackle complex assignments and shared insights to solve problems effectively.
- Fostered an atmosphere of mutual support by assisting team members in code reviews and testing efforts.

- Participated in team discussions and brainstorming sessions, promoting creativity and innovative thinking.
- Demonstrated a strong commitment to team goals and contributed to a positive team dynamic.

**Infosys LTD,
Hyderabad, India
Systems Engineer**

Aug 2018-Nov 2019

- Worked with Molina Health care on migration project with .NET and BizTalk tool.
- Various Health care plans are under different applications where each application is tested and migrated from 2009 version to 2016 using middle ware integration tool BizTalk.
- Updated the SQL database by altering the Stored Procedures, table scripts.
- Uplifted the applications and upgraded the Framework to 4.6.
- Performed Regression testing and monitored all instances while testing on the BizTalk.
- Debugging the failed instances through the Schemas and Map.
- Worked on the Trading Partners, creating and updating them.
- BizTalk uses Adapters for various message formats like EDI, HTTP, SFTP.
- Creating application on BizTalk with DLL's and running the application to check the status of the instances whether pipeline components, orchestration gets success or fail. Once the application succeeded monitoring the input test file if it got updated to processed folder upon the complete Execution.
- Worked with QA team and worked as support on application for testing and deployment.
- Code check-in with Team Foundation Server.
- Participated in Code Reviews to validate the coding standards to meet the project deliverables.
- Debugging the code and running the application on visual studio with breakpoints.
- Worked effectively within cross-functional teams to achieve migration project objectives.
- Collaborated with team members to troubleshoot and resolve technical issues, ensuring project success.
- Promoted a culture of continuous improvement by sharing best practices and lessons learned with colleagues.
- Encouraged open communication within the team, facilitating the exchange of ideas and problem-solving.
- Supported the team in adhering to coding standards and ensuring project deliverables met quality benchmarks.
- Fostered a sense of camaraderie and shared responsibility within the team to enhance overall productivity.
