

Sai Abhinav Reddy Chinta

Full Stack Developer

Arizona, USA | (732) 447-9760 | saiabhinavreddychinta@gmail.com

SUMMARY

- **Full Stack Developer with 4+ years** building enterprise applications using **Java, Spring Boot, React.js**, and **RESTful APIs**, improving reliability, performance, and engagement through efficient full-stack development solutions.
- Designed responsive front-end interfaces with **HTML5, CSS3, Tailwind CSS, Bootstrap, Redux, Vue.js**, and **React Hooks**, enhancing accessibility, optimizing performance, and ensuring seamless user experiences across multiple platforms.
- Engineered microservices and back-end features using **Java/J2EE, Hibernate, Express.js, JDBC**, and **Servlets**, integrating **MySQL, PostgreSQL, MongoDB** and **DynamoDB** to deliver optimized performance, stability, and solutions.
- Streamlined deployments by migrating workloads to **AWS ECS, EKS, Lambda, S3**, and **API Gateway**, implementing Docker, Kubernetes, and Jenkins pipelines to enable reliable, sustainable, cloud-native delivery workflows.
- Applied **Agile Scrum** collaboration using **Git, GitHub, Bitbucket, Jira**, and **SonarQube**, with **JUnit, Mockito**, and **Selenium testing**, strengthening defect detection, code quality, and reliable, high-performing software release cycles.

SKILLS

Programming Languages:	Java, C, C++, SQL, Python, Typescript, JavaScript
Frameworks:	Struts, Spring Boot, Spring Batch, Spring Security, Spring AOP, Spring Core, Angular 12, GraphQL, Express.js, Vue.js
Web Technologies:	HTML5, CSS/CSS3, Tailwind CSS, AJAX, jQuery, Bootstrap, XML, JSON, UI, Material, SASS, ES6, Redux, React Hooks, REST API, RESTful API, React.js
Java/J2EE Technologies:	Servlets, EJB, JTA, JDBC, JSP, JSTL, Webservices, Microservices, Spring MVC, Hibernate, ORM
Database:	Oracle SQL, MySQL, MongoDB, PostgreSQL, PL/SQL, DynamoDB
Cloud Platforms:	Amazon Web Services (ECS, EKS, Lambda, S3, API Gateway, CloudWatch)
IDEs:	Visual Studio Code, Eclipse IDE, IntelliJ IDEA, Spring Tool Suite (STS)
Web/Application Servers:	Oracle WebLogic, IBM WebSphere, Apache Tomcat, JBoss
Testing Tools:	JUnit, Mockito, Selenium
Build/ Other Tools:	Maven, Gradle, ANT, Jenkins, Docker, Kubernetes, SOAP, Postman, Jira, SonarQube, Kafka, Jupyter
Methodologies:	SDLC, Agile (SCRUM), Waterfall
Version Control:	Git, GitHub, SVN, Bitbucket
Operating System:	Windows, Linux, Mac OS

EXPERIENCE

Oracle Health | Full Stack Developer | USA

Aug 2024 – Present

- Scoped patient-portal objectives with clinicians and product owners, allocating **30%** of sprint efforts to refining epics and acceptance criteria, aligning compliance, usability, and performance goals with measurable **Agile** release outcomes.
- Designed **RESTful** service contracts in **Spring MVC** and **Spring Boot**, modeling entities against **Oracle SQL** schemas, versioning APIs, and documenting endpoints to streamline integration and reduce ambiguity across dependent teams.
- Built accessible **React.js** interfaces with reusable components, validation, and state handling, streamlining scheduling, results, and messaging while improving task completion and aligning with clinical workflows.
- Implemented authentication and authorization with **Spring Security** in **Spring Boot**, dedicating **45%** of development time to centralizing role policies, securing routes, and enabling context propagation across transactions and workflows.
- Engineered persistence layers with **Hibernate** and **Oracle SQL**, tuning queries, indexes, and transactions to ensure data integrity, predictable performance, and recoverability for critical patient, provider, and encounter records.
- Orchestrated event-driven functions on **AWS Lambda** for notifications, audit trails, and asynchronous tasks, integrating with APIs, enabling reliable processing while decoupling latency-sensitive actions from interactive patient workflows.
- Established unit testing coverage using **JUnit** across controllers, services, and repositories, creating mocks, fixtures, and assertions to detect regressions early and validate clinical logic against evolving business rules.

- Automated builds and packaging with **Maven**, standardizing profiles and dependency management, producing repeatable artifacts, and enabling deterministic deployments across environments with consistent versioning.
- Deployed services on **Oracle WebLogic** over Linux, where **40%** of release cycles focused on configuring resources, health checks, and secured endpoints, validating runtime behavior and ensuring stable rollouts through staged promotions.
- Collaborated in **Agile Scrum** ceremonies using **IntelliJ** IDEA for development, **Git** for version control, and backlog-driven delivery, iterating continuously from discovery through release, and capturing learnings for subsequent increments.

Infosys | Full Stack Developer | India

Jul 2020 – Jul 2023

- Coordinated discovery with stakeholders, clarified compliance requirements, and translated epics into milestones, dedicating **35%** of time to aligning **Waterfall** scope and maintaining traceability via **GitHub** issues, reviews & approvals.
- Defined **system architecture** and delivery roadmap, sequenced milestones, standardized coding conventions, API contracts, and test entry criteria to streamline analysis, development, testing, deployment, and release phases.
- Developed **Angular 12** dashboards with modular components and routing, dedicating **40%** of effort to integrating Redux for deterministic state management, enabling reliable UI rendering and workflows.
- Delivered backend endpoints using **Java Servlets** on **Apache Tomcat**, establishing request validation, pagination, error contracts, and caching headers to support efficient, reliable data delivery for analytical and operational views.
- Modeled financial entities and transactions in **PostgreSQL** by designing normalized schemas with constraints and indexes, optimizing read/write paths to enhance reporting by **20%**, reconciliation, and customer operations performance.
- Integrated front-end and back-end with typed contracts, aligning **Angular models** to servlet responses, enforcing serialization standards, and instrumenting client logs to expedite defect detection during testing and user acceptance.
- Authored end-to-end regression tests with **Selenium**, covering critical paths, negative scenarios, and accessibility checks, enabling repeatable verification and reducing manual validation cycles during formal Waterfall testing gates.
- Containerized services on **AWS ECS**, defining task definitions, environment variables, and autoscaling policies to enable reliable rollouts, health monitoring, and controlled blue-green deployments across environments.
- Standardized Gradle builds by configuring dependency management, environment profiles, and reproducible artifacts, developing deterministic pipelines with artifact traceability aligned to governance, audits, and Waterfall approvals.
- Managed source control with **GitHub**, enforcing branch protections, structured PR reviews, and release tagging, preserving audit trails and enabling coordinated handoffs between development, testing, and deployment teams.
- Developed on **Windows** using **Visual Studio Code**, instrumented logs and diagnostics, documented runbooks and operational checklists to support hypercare, knowledge transfer, and maintenance following production releases.

EDUCATION

Master's in Information Technology

Aug 2023 – May 2025

Arizona State University, Tempe, AZ, USA

Bachelor of Technology in Computer Science

Jul 2018 – May 2022

Vellore Institute of Technology, Vellore, India
